

HSBC Responsible Investment Funds SRI Euroland Equity

This subfund promotes environmental or social characteristics but does not have sustainable investment as its objective.

All mandatory PAIs as defined in Table 1 of annex 1 of the Regulatory Technical Standards for Regulation 2019/2088 are used to assess that the subfund's sustainable investments do not cause significant harm to environmental or social objectives. The principle of 'do no significant harm' to environmental or social objectives applies only to the subfund's underlying sustainable investments. Issuers reported for potential breaches of the UN Global Compact principles are excluded, unless they have been subject to enhanced ESG analysis (ESG Due Diligence) establishing that they are not in breach of these principles. These principles are aligned with the UN Guiding Principles on Business and Human Rights and the OECD Guidelines for Multinational Enterprises.

The subfund promotes the following environmental or social characteristics:

- Selection of issuers with good ESG practices according to a "rating improvement" approach and consideration of sustainability indicators. At least 80% of investments must meet minimum E, S and G and ESG ratings.
- Consideration of specific sustainability indicators.
- Exclusion of securities from issuers based on ESG criteria defined by the SRI label framework, HSBC Asset Management's responsible investment policies and the exclusions applicable to the "Paris agreement" benchmark indices in accordance with ESMA guidelines on funds' name. The exclusions are listed in the SFDR appendix to the prospectus in the section on the binding elements of the investment strategy.

Investment strategy:

The investment strategy of this subfund uses the following approaches:

- ESG integration (inclusion of ESG criteria in financial analysis);
- Consideration of specific sustainability indicators;
- "Rating improvement" approach;
- Exclusion of securities from issuers based on ESG criteria defined by the framework of the SRI and Towards Sustainability labels, HSBC Asset Management's responsible investment policies and the exclusions applicable to the "Paris agreement" benchmark indices in accordance with ESMA guidelines on funds' name.
- Engagement and voting activities.

Proportion of investments:

- #1 Aligned with (E/S) characteristics: 80% minimum
- #2 Others (not aligned with E/S characteristics or not considered sustainable investments): 20% maximum
- #1 A Sustainable investments: 10% minimum
- #1 B Other E/S characteristics (aligned with E/S characteristics but not considered sustainable investments): 70% minimum
- Aligned with EU Taxonomy: 0%
- Other environmental: 10% minimum
- Social: 0%

Monitoring of environmental or social characteristics

Funds are monitored to ensure that the portfolios meet the non-financial criteria and, where applicable, internally established thresholds (such as the portfolio's average ESG score or exclusions). First-level controls are also performed by independent management teams (investment restrictions team and risk team).

Methods and Data sources and processing

HSBC relies on a proprietary ESG analysis model with data supplied by non-financial rating agencies and the management company's internal research.

Our investment team relies on the information available in the Global Research ESG intranet tool, which uses data from the following providers: MSCI ESG Research, ISS ESG, S&P Trucost, Sustainalytics, RepRisk, FTSE Green Revenues, Carbon4, Iceberg Datalab (IDL), GAIA Research, Equileap and Denominator. HSBC Asset Management verifies the data used. For the portfolio's ESG rating, the data are weighted by coefficients reflecting our analysis of the various business sectors and their respective ESG impacts.

Limitations to methods and data

The management company relies on non-financial data providers. As a result, the company is subject to certain operational and data quality risks associated with reliance on third-party service providers and data sources. Furthermore, data coverage may be limited depending on the type of issuer (small caps, certain high-yield issuers) and by the geographical area of the issuer (particularly for emerging countries). When non-financial data are not available in our suppliers' databases, we initiate a qualitative analysis and possibly exchanges with the company to supplement our assessment of E/S characteristics. HSBC Asset Management is unaware of any methodological limitations likely to prevent the attainment of the E/S characteristics pursued by the subfund.

Due diligence

Our monitoring of companies and all other issuers held in actively managed portfolios, by analysts, management teams, investment restrictions, and the risk department, is quantitative and qualitative and includes strategy, financial and non-financial performance constraints, risks, capital structure, social and environmental impact, and corporate governance. For this monitoring, we use our own in-house research and the research of brokers and other independent research providers.

Lastly, our teams in charge of voting and shareholder engagement activities can support the investment teams in the ESG assessment of issuers.

Engagement policies

Our approach to shareholder engagement incorporates several levers for action, including 1) direct dialogue with companies, 2) exercising voting rights, and 3) a gradual escalation procedure with companies when the ESG risks or controversies to which they are exposed are not managed.

We prioritise dialogue and interaction with companies in which we have significant positions, but also depending on the importance of the environmental or social issues identified. Furthermore, every year, we define engagement themes that we consider to be key.

Important information

This regulatory document is published pursuant to Article 10 of the SFDR.
