Activity report

Macroeconomic overview

In the first quarter (Q1) of 2024, the US economy proved to be more robust than expected, leading to significant upward revisions in growth forecasts for 2024¹ to 2.2% compared with 1.2% at the end of December. Household consumption remained strong, fuelled by a decline in the savings rate, which supported demand, labour market resilience, and private sector confidence. In Europe, leading indicators (PMI surveys, consumer confidence) improved, driven by the service sector, contrasting with continued weakness in the industrial sector. As a result, recession risks in the eurozone diminished significantly in Q1, despite sluggish activity in Q4 2023. In Europe, economists anticipated near-stagnation for 2024, with GDP growth expected at 0.3% in the UK (vs. 0.1% in 2023) and 0.5% in the eurozone (vs. 0.4% in 2023). In emerging economies, India continued to deliver positive surprises, driven by infrastructure deployment, strong consumer demand, and robust exports. In China, the lack of recovery in the real estate sector prompted authorities to implement further support measures, such as reductions in bank reserve requirements, lower mortgage rates, and the establishment of a stabilisation fund. Trade tensions between China and the United States did not prevent an improvement in leading indicators (PMI surveys showing gains this quarter). China's economic slowdown was expected to continue gradually, with GDP growth projected at 4.6% in 2024 and 4.4% in 2025 (compared with 5.2% in 2023). In an economic environment where recession risks have diminished, inflation trends diverged. In the United States, inflation exceeded expectations (3.5% in March vs. 3.4% expected and 3.4% in December), while eurozone inflation came in lower than anticipated (2.4% in March vs. 2.5% expected and 2.9% in December). However, in both the United States and the eurozone, core inflation (excluding energy and food) remained persistent at 3.8% and 2.9%, respectively, in March. This persistence was linked to the strength of the service sector and wage growth in a context of weak productivity gains, likely influenced by factors such as labour hoarding, reduced working hours, increased absenteeism, and a relative rise in lower-skilled labour participation. Given their significant impact on corporate profit margins, productivity trends and unit labour costs remained closely monitored, as they directly influence prices. These indicators are therefore closely monitored to guide monetary policy and anticipate changes in key interest rates and financial conditions.

The global economy continued to recover in Q2 2024, marked by higher-than-expected inflation and risks of greater monetary policy divergence. Inflation in the United States once again surprised to the upside in March at 3.5%, before easing in April (3.4%) and May (3.3%). In the eurozone, inflation proved more persistent than anticipated, fluctuating between 2.4% and 2.6% during the quarter against a backdrop of economic recovery. GDP growth in Q1 exceeded expectations in both Europe and the United States, with household consumption continuing to rise. PMI surveys from March to May signalled continued private sector growth in Europe, supported by services, despite ongoing industrial sector challenges. Inflationary pressures appeared stronger in the US than in Europe, as United States demand remained dynamic and exceeded its potential, unlike in Europe, where supply constraints dominated. The US Federal Reserve also maintained a cautious stance on the timing of its monetary easing cycle, influencing central banks in emerging markets, where currency risks remained a concern. Inflation in emerging economies remained higher than in developed countries, exacerbated by geopolitical uncertainties, volatile oil and gas prices, and sharp increases in wheat and copper prices.

¹ Bloomberg consensus at 31/03/2024

Lastly, the increase in expectations of central bank interest rate differentials partly weighed on emerging market currencies, sustaining high inflation through imported goods prices. In China, economic data was mixed, with weak domestic demand and sluggish inflation (0.2% in June). However, Chinese authorities continued supporting the real estate sector, notably through macroprudential measures and the conversion of unsold housing units into social housing. Despite trade tensions with the US and the risk of escalation, particularly with new tariffs on electric vehicles, solar panels, and lithium-ion batteries, China's export momentum remained intact in Q2.

In the third quarter (Q3) of 2024, geopolitical risks, uncertainties related to the US elections and fiscal policy choices in both Europe and the United States left economists in wait-and-see mode, between the scenario of a soft landing or a recession. The continued moderation in inflation in the United States (2.5% in August following 3.3% in May), in the eurozone (1.8% in September versus 2.6% in May) and in a majority of emerging markets enabled further rate cuts by central banks, in a context of relative economic resilience. Indeed, the acceleration in US GDP in Q2 surprised on the upside (3.0% guarter-on-quarter annualised vs. 2.0% expected and 1.4% in Q1), particularly household consumption. In addition, US GDP figures were revised upwards, notably household savings and income, which benefited from interest gains on investments and deposits during the rise in interest rates. In the United States, employment reports (particularly the rise in the unemployment rate to 4.3% in July vs. 4.1% expected, after a low of 3.4% in April 2023) as well as the deterioration in confidence surveys (notably in the manufacturing sector) indicated that the risk of recession was higher than that posed by persistent inflation. In the eurozone, although GDP growth was in line with expectations (0.2% q/q in Q2), this was due to the positive contribution of foreign trade and lower imports resulting from a contraction in domestic demand. Divergences within the region have increased, with a deterioration in activity in Germany, some resilience in Italy and France, and strong expansion in Spain. Elsewhere in Europe, the economic recovery in the UK continued in Q2, albeit at a more moderate pace, driven by public spending and private investment. With the new tax rules of the European Union and the new UK government, tax policy choices will impact economic activity, with uncertain multiplier effects over the coming years. In China, after lower-than-expected growth (0.7% g/g in Q2 vs. 0.9% expected and 1.6% in Q1), the authorities stepped up their support for the real estate and financial sectors at the end of September and signalled new measures in favour of domestic demand.

In the fourth quarter of 2024 (Q4), in developed countries, GDP growth in the third quarter was stronger than expected overall, thanks to household consumption, particularly in the United States, the eurozone and Japan. Disinflation led to an improvement in purchasing power against the backdrop of the resilience of the labour market and easing of financial conditions. However, during the fourth quarter, confidence indicators pointed to a slowdown in activity, driven by the continued decline in the manufacturing sector, despite a certain resilience in services. The trade and tax policies proposed by the new US administration from 2025 have exacerbated the business community's concerns. In Europe, the need to return to a balanced budget and the likelihood of higher taxes led to a further decline in consumer confidence, which could weaken consumption, the main pillar of economic activity. GDP growth forecasts for 20252 were revised downwards in the eurozone from +1.3% September³ and to +1.0% in December², due to Germany (GDP revised to +0.4%² vs. +1.0% in September), and in France (GDP revised to +0.7%² vs. +1.1% in September³). In the rest of Europe, GDP growth forecasts in 2025 showed some resilience, but only Spain is expected to continue to grow relatively strongly at +2.2%, driven by favourable comparative advantages, particularly in terms of wage costs, energy prices and exposure to the tourism sector. Statistics in the United States confirmed US exceptionalism with solid growth in November, on the wage front (+4.0% y/y) and consumer spending (5.5% y/y), which tends to support inflation (2.7% y/y in November vs. 2.4% in September). US growth forecasts for 2025 continued to be revised upwards, from +1.8% in September to +2.1% in December². US exceptionalism contrasts with economies that are losing momentum amid trade tensions and the risk of tariff barriers. This

² Bloomberg consensus at 31/12/2024

³ Bloomberg consensus at 30/09/2024

environment is not expected to lead to inflationary pressures or wage-price spiral risks in 2025: inflation² is expected to slow to 2.0% in the eurozone, to 2.1% in the United States, or at most stabilise at 2.5% in the UK, which would allow additional monetary easing, albeit of varying magnitude depending on the national context. Only monetary policies in Brazil and Japan will continue to stand out, with more rate hikes in 2025. In China, the authorities signalled that they were staying on course to increase credit support, and were willing to take exceptional measures. The moderation in economic activity should therefore remain relatively well controlled thanks to the good performance of the industrial sector and the beginning of a recovery in household consumption, making it possible to anticipate a moderate slowdown² in 2025 to 4.5% compared with 4.8% in 2024. In India, the consensus among economists is for GDP growth of 6.5%, slightly lower than the September forecast (6.9%) and compared with 8.2% in 2024. Lastly, in Latin America, the trend for 2025 is also slowing, particularly in Mexico, where the US free trade agreement will be called into question.

Financial overview

In the first quarter of 2024 (Q1), the resilience of the US economy sustained the equity market upturn that had begun in the previous quarter (MSCI* World Index +9.5% q/q in Q1 2024). The US stock market (MSCI* United States +10.4%) outperformed the global index, as well as the markets in Japan (+19.3%) and the eurozone (+10.3%). Risk appetite was fuelled by generally positive corporate earnings and a reduction in recession fears. This environment also benefited credit markets in the US and Europe, particularly in the high-yield (HY) bond segment, which outperformed lower-risk investment-grade (IG) bonds. Conversely, emerging equity markets (MSCI EM +4.6%) did not benefit as much from this context, and bond markets were negatively impacted, as they had priced in significant monetary easing expectations. At the beginning of January, markets were already anticipating substantial interest rate cuts in 2024, particularly from the US Federal Reserve (Fed) and the European Central Bank (ECB) (approximately 150 basis points), as well as from central banks in Latin America. The stronger-than-expected momentum of the US economy and persistent inflation led to a shift in these expectations, which, by the end of March, only factored in rate cuts of 75 basis points (bps) for the Fed and 100 bps for the ECB. As a result, sovereign yields recovered strongly in Q1: +32 bps to 4.20% in the US, +27 bps to 2.30% in Germany, and +39 bps to 3.93% in the UK, with a similar trend in emerging markets. The delay in the Fed's rate-cut cycle created a favourable yield differential for the US dollar (DXY1 index +3% in Q1), particularly at the expense of the Japanese yen (-6.8% against the US dollar in Q1) and the Swiss franc (-6.7%). The Swiss franc was adversely affected by monetary policy expectations from the Swiss National Bank (SNB). In January, its chairman suggested that the SNB was less inclined to support a strong Swiss franc. Consequently, the SNB was the first among developed-market central banks to lower its key interest rate in March, from 1.75% to 1.50%. Lastly, tensions in the Middle East continued to support oil prices (WTI +16% to USD 83) and gold (+8% to USD 2,230 per ounce).

Q2 2024 was primarily shaped by uncertainties surrounding the US interest rate cut cycle, as well as political developments, particularly in France, which weighed on bond markets. Ten-year sovereign bond yields continued to rise in Q2: +20 bps to 4.40% in the US and 2.50% in Germany and +24 bps in the UK to 4.17%. This environment supported the continued appreciation of the US dollar (DXY⁶ index +1.3% in Q2), again at the expense of the Japanese yen (-5.9% against the US dollar in Q2), the Mexican peso (-9.6%), and the Brazilian real (-10.9%). Political developments exacerbated market volatility, with a positive reception to post-election outcomes in South Africa and India, while Mexico faced a less favourable reaction. In France, the unexpected dissolution of parliament following the European parliamentary elections and the announcement of legislative elections on June 30 and July 7 triggered a strong risk-averse reaction. Bond and equity markets priced in the risks of fiscal slippage and uncertainties regarding compliance with European budgetary rules. As a result, France's 10-year bond yield jumped 49 bps to 3.30%, which also drove up yields on the debt of other high-risk European countries: +26 bps to 3.42% for Spanish government bonds and +39 bps to 4.07% for their Italian counterparts. Closely tied to sovereign risk, financial securities also suffered, along with the high-yield credit market and eurozone equities (MSCI eurozone -1.2% q/q). Political uncertainties also negatively impacted equity markets in Brazil (-2.5% q/q) and particularly in Mexico (-7.5% q/q). Conversely, stock indices continued to rise in the US (+4.0% q/q). the UK (+3.6%), and India (+10% q/q) and rebounded in China (+7% q/q) and South Africa (+8.5%).

In the third quarter (Q3) of 2024, the financial markets were particularly turbulent, against a backdrop of concerns about global growth and central bank decisions. Volatility indices surged, with market reversals, particularly in early August due to two triggers: a sharper-than-expected deterioration in US employment and an unexpected rate hike by the Bank of Japan. These announcements occurred in illiquid markets due to the summer holidays and led to sudden unwinding of speculative positions. However, the sharp fall in global stock markets lasted only a few days, in the wake of heightened expectations of central bank rate cuts. Against a backdrop of disappointing employment statistics, falling oil prices (WTI -16% g/g to USD 68/barrel) and disinflation, the Fed began its monetary easing cycle in September, with a sharper-than-expected cut in its key rates of -50 basis points (bps) versus -25 bps expected. The Fed's rate cut paved the way for a series of decisions by EM and DM central banks, but also fostered expectations of larger rate cuts. In China, the authorities rolled out a major support plan at the end of September, through reductions in bank rates and reserve requirements, as well as measures aimed at the real estate and financial sectors (including a fund for share buybacks). These measures had a strong impact on stock market indices, and the MSCI* World index ended the third guarter up 5% q/q (quarter-on-quarter). Equities in developed countries underperformed slightly (MSCI DM +4.8% q/q) against emerging markets (MSCI EM +6.8% q/q), underpinned by the Chinese index, which jumped 24% q/q. On the bond markets, expectations of increased monetary easing favoured the riskiest securities, such as high-yield credit, sovereign bonds of emerging economies (particularly Mexico and South Africa) and those of the eurozone periphery (Greece, Portugal, Italy, Spain). On the foreign exchange market, the Fed's decision weighed on the US dollar (DXY1 -4.8% q/q in Q3). In contrast to the Fed, the rate hike by the Japanese central bank propelled the yen against the US dollar (+12% q/q). Lastly, on commodity markets, gold continued to soar (+13% g/q to USD 2,634/oz); volatility in the price of a barrel of oil (WTI -16% g/g to USD 68/barrel) was linked to the prospect of a slowdown in global demand, geopolitical tensions in the Middle East and the uncertain outcome of OPEC+ supply conditions ahead of their next meeting in December.

In the fourth quarter (Q4) of 2024, the markets priced in the risks associated with changes in trade and fiscal policy following the US elections on 8 November. Donald Trump's new administration is considering, among other things, a fiscal stimulus, tariff barriers, immigration restrictions, cuts in federal spending and a resumption of oil and gas extraction. Despite the lack of visibility in terms of scale and timing, the markets anticipated the likely impacts of such measures: sustained growth and inflation in the United States, resulting in less monetary easing by the Federal Reserve. The markets have factored in that Fed Funds rates would fall less than expected before the elections: they stood at 3.75%-4.0% for December 2025 (vs. 3.25%-3.50% before the elections). The change in monetary policy expectations therefore favoured the US dollar (DXY¹ index 7.6% g/g; +7.1% y/y). This American exceptionalism resulted in an outperformance of US equities (MSCI* US index +2.8% q/g; +25.1% y/y), significantly underperforming emerging markets (MSCI EM index -4.2% g/g; +13.7% y/y), particularly in Brazil (MSCI index -10.0% q/q; -11.4% y/y), Mexico (MSCI index -5.0% q/q; -10.2% y/y) and India (MSCI index -8.7% q/q; +15.7% y/y). European equities ended the year with lacklustre performance (EuroStoxx600 index -2.9% q/q; +6.0% y/y) and mixed performance, with good growth in Germany (MSCI index +1.6% g/g; +14.9% y/y), unlike in the UK (-0.2% g/g; +9.5% y/y), and especially in France (-3.4% q/q; -1.2% y/y), penalised by budgetary and fiscal uncertainties. On the bond markets, the challenges of monetary policy and fiscal consolidation intensified the movements of yield curve steepening, as well as the divergences in sovereign yield developments. In Q4, 10-year sovereign bond yields rose sharply in the United States (+79 bps to 4.57%) and in the UK (+57 bps to 4.57%), but to a lesser extent in Germany (+24 bps to 2.37%), France (+28 bps to 3.20%) and especially Italy (+7 bps to 3.52%). In credit markets, the riskiest bond segments (High Yield/HY) outperformed the less risky segments (Investment Grade/IG). On the oil markets, many factors contributed to price volatility: the expected slowdown in global demand in 2025, geopolitical uncertainties in the Middle East, the appreciation of the US dollar and the prospect of a possible resumption of operations in the United States, the world's largest producer. Thus, despite an improvement in Q4 (Brent +4.0% q/q), 2024 ended with a decline in the price of a barrel (Brent) of -3.1% y/y to USD 74.6/barrel.

Remuneration information

In accordance with the applicable regulations, HSBC Global Asset Management (France) has chosen to disclose the information relating to the remuneration of its personnel for all the AIFs and UCITS under French law that it manages.

The remuneration paid by HSBC Global Asset Management (France) consists of fixed remuneration and may, if economic conditions permit, include a variable component in the form of a discretionary bonus. The variable remuneration is not linked to the performance of the vehicles managed, nor is there any incentivisation on the basis of gains.

HSBC Global Asset Management (France) applies the HSBC Group's remuneration policy.

This Group policy incorporates a large number of the principles set out in the AIFM regulations as well as the UCITS regulations.

From 2014 onwards, HSBC Global Asset Management (France) has made adjustments to this remuneration policy in order to comply with specific rules in the AIFM regulation and then the UCITS regulation concerning the management of funds covered by these respective regulations.

In particular, HSBC Global Asset Management (France) has introduced a financial instrument indexation mechanism based on an index representing a basket of all funds for which HSBC Global Asset Management (France) is the management company, with the exception of employee shareholding mutual funds (FCPE) for all employees who are entitled to deferred remuneration under the AIFM regulation and the UCITS regulations.

The HSBC Global Asset Management (France) remuneration policy has no impact on the risk profile of AIFs and UCITS.

The full HSBC Global Asset Management (France) remuneration policy is available on its website at www.assetmanagement.hsbc.fr.

Breakdown of the company's fixed and variable remuneration for financial year 2024

The information about the total remuneration paid by the management company to its personnel and the aggregate amount paid to executives and staff of the management company who have an impact on the risk profile appears in the table below.

In 2024, a total of 303 people received remuneration for fiscal year 2024.

As defined in the remuneration policy of HSBC Global Asset Management (France), 42 people were identified as "Risk Takers" for all managed portfolios in 2024.

16

The employees identified as Risk Takers are:

- Members of the Board of Directors;
- Responsible officers and members of the Executive Committee;
- Heads of the management and trading divisions;
- Heads of sales, products, and marketing;
- Heads of control functions (risk, compliance, and internal control);
- Legal and finance managers and heads of support and administrative functions.

	2024				
	Fixed remuneration paid in 2024	Variable remuneration paid in March 2024 (for 2023 performance) + deferred variable remuneration vested in 2024	of which non-deferred variable remuneration	of which deferred variable remuneration (*)	total EUR
All AMFR members of staff (incl. seconded in and branches, excl. seconded out) – 303 employees	€29,260,925	€12,520,610	€11,244,402	€1,276,208	€41,781,535

Of which senior management (14 employees)***	€2,420,314	€1,584,813	€1,322,258	€320,690	€4,005,127

^(*) Includes deferred shares fully vested in 2024 and the indexed deferred cash amount paid in 2024.

PR-000-100-100-100-100-1

^(**) Takes into account seconded or assigned people prorated for their time of presence in the company. Variable remuneration does not include any payments received by employees in 2024 under profit-sharing agreements.

Regulatory information

Risk monitoring report

General observation:

Over the period under review, the risk assessment and monitoring procedures established to manage the SICAV did not identify any (significant) anomaly regarding its exposure to market risk, credit risk, counterparty risk, or liquidity risk.

In addition, no anomaly having a significant impact in terms of valuation risk was identified over that period.

	Significant anomalies identified relating to the closure of the SICAV	Observations
1	Market risk	None
2	Credit risk	None
3	Counterparty risk	None
4	Liquidity risk	None
5	Valuation risk	None

Financial intermediary selection and assessment procedure

The management company selects brokers or counterparties using a procedure that complies with the regulations applicable to it. When carrying out this selection process, the management company fulfils its best execution obligation at all times.

The objective selection criteria used by the management company specifically include order execution quality, rates applied and the financial solidity of each broker or counterparty.

The counterparties, investment companies and service providers of HSBC Global Asset Management (France) are selected according to a specific evaluation process intended to ensure that the company receives a high-quality service. This is a key element in the general decisionmaking process which incorporates the impact of the broker service quality across all our departments, from Fund Management and Financial and Credit Analysis to Trading and Middle Office and Legal.

Counterparty selection can involve an entity linked to the HSBC Group or the SICAV's depositary.

The "Best Execution and Best Selection Policy" is detailed on the management company's website at www.assetmanagement.hsbc.fr.

18

Report on brokerage fees

In accordance with Article 321-122 of the General Regulation of the AMF, and if the terms of this article are met, the report on brokerage fees for the previous financial year is available on the management company's website at www.assetmanagement.hsbc.fr.

Exercise of voting rights

The management company's voting policy, as well as the report on the conditions in which the voting rights were exercised, may be consulted on the website: https://www.assetmanagement.hsbc.fr/en

Use of financial instruments managed by the management company or a related company

The table of financial instruments managed by the management company or a related company can be found in the notes to the SICAV's annual financial statements.

Conflict of interest policy

Because of its global reach and the wide range of financial services offered, the HSBC Group, or its affiliated companies (referred to below as HSBC), could have interests that differ from time to time from those of its clients or that conflict with its duties toward its clients. There may be conflicts between the interests of HSBC, its affiliated companies, or its employees, on the one hand, and the interests of its clients, on the other hand, or even conflicts between the clients themselves.

HSBC has defined procedures to identify and manage such conflicts, notably organisational and administrative arrangements intended to protect clients' interests. This policy is based on a simple principle: persons taking part in various activities posing a conflict of interest are required to execute these activities independently of each other.

Where applicable, HSBC implements measures to restrict the transmission of information to certain employees in order to protect clients' interests and to prevent any undue access to information concerning clients.

HSBC may also act on its own account and have a client as counterparty or even "match" the orders of its clients. Procedures are in place to protect clients' interests in such cases.

In some cases, HSBC's procedures and controls may not be sufficient to ensure that a potential conflict will not damage a client's interests. In these circumstances, HSBC informs the client of the potential conflict of interest in order to obtain the client's express consent to continue the activity. In any event, HSBC may refuse to intervene in circumstances where there would ultimately be a residual risk of harming a client's interests.

(Article L.225-37 of the French Commercial Code)

General Management procedures

In accordance with the provisions of Article L.225-51-1 of the French Commercial Code, we wish to inform you that the Board of Directors has opted to separate the duties of Chairman of the Board of Directors and Chief Executive Officer.

Patrick Jallot serves as Chairman of the Board of Directors, and Béatrice de Saint Levé is the Chief Executive Officer of the SICAV. No restrictions have been placed on the CEO's powers by the Board of Directors.

<u>Positions and offices held during the fiscal year (Article L.225-37-4 of the French Commercial</u> Code)

Below is a list of the positions and offices held in any other company by the corporate officers during the past fiscal year:

Name	Offices and functions at 31 December 2024
Patrick Jallot	Chairman and director of SICAV HSBC Responsible Investment Funds Director of SICAV French Government Bonds
Béatrice de Saint Levé	Chief Executive Officer of SICAV HSBC Responsible Investment Funds
Céline Boué	 Director representing HSBC Assurances Vie (France) in SICAV HSBC Responsible Investment Funds Director representing HSBC Assurances Vie (France) in NOVI 1 Fonds Nouvel Investissement 1 Director representing HSBC Assurances Vie (France) in NOVI 2 Fonds Nouvel Investissement 2 Advisory member of the IRC of SICAV NEIF III
Laetitia Tankwe	Director of SICAV HSBC Responsible Investment Funds
Olivier Gaval	Chairman and director of SICAV HSBC French Government Bonds Director of SICAV HSBC Responsible Investment Funds
Camille Olléon	 Director of SICAV HSBC Responsible Investment Funds Director of SFM

Annual Report as at 31/12/2024

20

Agreements referred to in Article L.225-37-4(2) of the French Commercial Code

These are agreements made directly or through intermediaries between firstly one of the corporate officers or one of the shareholders with a fraction of the voting rights of more than 10% of a company and secondly another company in which the first directly or indirectly holds more than half of the capital, with the exception of agreements pertaining to recurring operations concluded under normal conditions.

In this respect, we wish to inform you that no agreement covered by this article was entered into during the fiscal year.

Delegations granted to the Board of Directors

Delegations regarding capital increases (Articles L225-129-1 and L225-129-2 of the French Commercial Code):

Not applicable.

Statutory auditor's certification of the annual financial statements

HSBC Responsible Investment Funds

Financial year ended 31 December 2024

Statutory auditor's report on the annual financial statements

To the General Meeting of SICAV HSBC Responsible Investment Funds,

Opinion

In compliance with the assignment entrusted to us by your board of directors, we have audited the accompanying financial statements of the HSBC Responsible Investment Funds undertaking for collective investment, established in the form of a SICAV, for the year ended 31 December 2024.

In our opinion, the financial statements give a true and fair view of the assets and liabilities and of the financial position of the Company as at 31 December 2021 and of the results of its operations for the year then ended in accordance with French accounting principles.

Basis of our audit opinion

Audit reference standard

We conducted our audit in accordance with professional standards applicable in France. We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our audit opinion.

Our responsibilities under those standards are further described in the "Statutory auditor's responsibilities for the audit of the annual financial statements" section of this report.

Independence

We conducted our audit in accordance with the rules of independence provided for in the French Commercial Code and in the professional code of ethics for statutory auditors over the period from 30 December 2023 to the date of issue of our report.

Remark

Without qualifying the opinion expressed above, we draw your attention to the consequences of the change in accounting methods set out in the notes to the annual financial statements.

Basis for our assessments

Pursuant to the provisions of Articles L. 821-53 and R. 821-180 of the French Commercial Code concerning the basis for our assessments, we hereby inform you that, in our professional judgement, the most significant assessments that we conducted pertained to the appropriateness of the accounting principles applied, in particular as regards the financial instruments in the portfolio and the overall presentation of the financial statements, in view of the accounting system applicable to open-ended undertakings for collective investments.

The assessments we have made are part of our audit of the annual financial statements as a whole and were used to form our opinion, as set out above. We do not provide an opinion on individual aspects of the financial statements.

Specific verifications

We also performed the specific verifications required by law and the regulations, in accordance with professional standards applicable in France.

Information given in the management report and in the other documents with respect to the financial position and the financial statements provided to the shareholders

We have no matters to report as to the fair presentation and the consistency with the financial statements of the information given in the management report of the board of directors and in the other documents with respect to the financial position and the financial statements provided to shareholders.

Report on Corporate Governance

We attest that the corporate governance section of the management report of the Board of Directors sets out the information required by Article L. 225-37-4 of the French Commercial Code.

Responsibilities of management and those charged with governance for the financial statements

Management is responsible for the preparation and fair presentation of the financial statements in accordance with French accounting principles and for such internal control as management determines is necessary to enable the preparation of financial statements that are free from material misstatement, whether due to fraud or error.

In preparing the financial statements, management is responsible for assessing the Company's ability to continue as a going concern, disclosing, as applicable, matters related to going concern and using the going concern basis of accounting unless it is expected to liquidate the Company or to cease operations.

The financial statements were approved by the board of directors.

Statutory auditor's responsibilities for the audit of the annual financial statements

It is our responsibility to prepare a report on the annual financial statements. Our goal is to obtain reasonable assurance that the annual financial statements taken as a whole do not contain any material misstatements. Reasonable assurance is a high level of assurance but is not a guarantee that an audit performed in accordance with the professional auditing standards will always detect any material misstatement. Misstatements may arise as a result of fraud or error and must be regarded as being material if it can reasonably be expected that they, individually or in the aggregate, will affect the financial decisions made by users of the financial statements on the basis of the financial statements.

As specified in Article L. 821-55 of the French Commercial Code, our audit does not include assurance on the viability or the quality of management of your SICAV.

As part of an audit conducted in accordance with professional standards applicable in France, statutory auditors exercise their professional judgement throughout the audit process. In addition, they:

- ldentify and assess the risk of the annual financial statements containing material misstatements, whether due to fraud or error, design and implement audit procedures in response to this risk, and obtain sufficient and appropriate evidence on which to base their audit opinion. The risk of not detecting a material misstatement resulting from fraud is higher than for one resulting from error, as fraud may involve collusion, forgery, intentional omissions, misrepresentations, or the override of internal control;
- Obtain an understanding of internal control relevant to the audit in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the entity's internal control;
- Evaluate the appropriateness of accounting policies used and the reasonableness of significant accounting estimates made by management, as well as the overall presentation of the financial statements;
- Conclude on the appropriateness of management's use of the going concern basis of accounting and, based on the audit evidence obtained, whether a material uncertainty exists related to events or conditions that may cast significant doubt on the SICAV's ability to continue as a going concern. This assessment is based on the evidence collected up to the date of their report; nonetheless, it should be borne in mind that subsequent circumstances or events could cast doubt on the fund's ability to continue as a going concern. If we conclude that a material uncertainty exists, we are required to draw attention in the audit report to the related disclosures in the financial statements or, if such disclosures are not provided or are inadequate, to issue a qualified opinion or a disclaimer of opinion;

Evaluate the overall presentation of the financial statements and assess whether these statements represent the underlying transactions and events in a manner that achieves fair presentation.

Paris-La Défense, 24 March 2025

Accounting policies

The annual financial statements are presented in the form prescribed by ANC regulation 2020-07, as amended by ANC regulation 2022-03.

General accounting principles are applied:

- true and fair view, comparability, going concern;
- accuracy, reliability;
- prudence;
- consistency of accounting methods from one period to the next.

In accordance with Article 423-1 of ANC Regulation 2020-07, the annual financial statements of the SICAV include only the following items:

- the list of subfunds, with for each of them its accounting currency and the exchange rate used to keep the accounts;
- the list of subfunds opened and closed during the financial year;
- the annual financial statements drawn up, including a balance sheet, an income statement and an appendix drawn up for each of the subfunds existing at the end of the reporting period, in its accounting currency, in accordance with the provisions of the regulation.

For the accounting rules and methods applicable by each of the subfunds and the additional information concerning them, please refer to the information concerning each subfund.

The HSBC RESPONSIBLE INVESTMENT FUNDS SICAV consists of 7 subfunds:

- HSBC RESPONSIBLE INVESTMENT FUNDS EUROPE EQUITY GREEN TRANSITION
- HSBC RESPONSIBLE INVESTMENT FUNDS SRI GLOBAL EQUITY
- HSBC RESPONSIBLE INVESTMENT FUNDS SRI EUROLAND EQUITY HSBC RESPONSIBLE INVESTMENT FUNDS SRI EURO BOND
- HSBC RESPONSIBLE INVESTMENT FUNDS SRI MODERATE
- HSBC RESPONSIBLE INVESTMENT FUNDS SRI BALANCED
- HSBC RESPONSIBLE INVESTMENT FUNDS SRI DYNAMIC

Subfund:

HSBC RESPONSIBLE INVESTMENT FUNDS - EUROPE EQUITY GREEN TRANSITION

Activity report

HRIF Europe Equity Green transition – 2024 (performance of the A share)

After three years of strong appreciation – +34.4% in 2019, +22% in 2020, and +14.8% in 2021 and a decline of -22.2% in 2022 – the subfund's unit value rose by 11.2% in 2023 and fell slightly by 3.21% in 2024. Compared with the MSCI Europe GDP Weighted index, the strategy outperformed in 2019 and 2020. Energy transition stocks underperformed the strategy's benchmark in 2021, 2022, 2023 and 2024, with relative declines of -6.4% in 2021, -10.9% in 2022, -6.6% in 2023 and -13.2% in 2024.

Macroeconomic and thematic analysis

In the first quarter (Q1) of 2024, the US economy proved to be more robust than expected, leading to significant upward revisions in growth forecasts for 20244 to 2.2% compared with 1.2% at the end of December. Household consumption remained strong, fuelled by a decline in the savings rate, which supported demand, labour market resilience, and private sector confidence. In Europe, leading indicators (PMI surveys, consumer confidence) improved, driven by the service sector, contrasting with continued weakness in the industrial sector. As a result, recession risks in the eurozone diminished significantly in Q1, despite sluggish activity in Q4 2023. In Europe, economists anticipated near-stagnation for 2024, with GDP growth expected at 0.3% in the UK (vs. 0.1% in 2023) and 0.5% in the eurozone (vs. 0.4% in 2023). In emerging economies, India continued to deliver positive surprises, driven by infrastructure deployment, strong consumer demand, and robust exports. In China, the lack of recovery in the real estate sector prompted authorities to implement further support measures, such as reductions in bank reserve requirements, lower mortgage rates, and the establishment of a stabilisation fund. Trade tensions between China and the United States did not prevent an improvement in leading indicators (PMI surveys showing gains this quarter). China's economic slowdown was expected to continue gradually, with GDP growth projected at 4.6% in 2024 and 4.4% in 2025 (compared with 5.2% in 2023). In an economic environment where recession risks have diminished, inflation trends diverged. In the United States, inflation exceeded expectations (3.5% in March vs. 3.4% expected and 3.4% in December), while eurozone inflation came in lower than anticipated (2.4% in March vs. 2.5% expected and 2.9% in December). However, in both the United States and the eurozone, core inflation (excluding energy and food) remained persistent at 3.8% and 2.9%, respectively, in March. This persistence was linked to the strength of the service sector and wage growth in a context of weak productivity gains, likely influenced by factors such as labour hoarding, reduced working hours, increased absenteeism, and a relative rise in lower-skilled labour participation. Given their significant impact on corporate profit margins, productivity trends and unit labour costs remained closely monitored, as they directly influence prices. These indicators are therefore closely monitored to guide monetary policy and anticipate changes in key interest rates and financial conditions.

⁴ Bloomberg consensus at 31/03/2024

The global economy continued to recover in Q2 2024, marked by higher-than-expected inflation and risks of greater monetary policy divergence. Inflation in the United States once again surprised to the upside in March at 3.5%, before easing in April (3.4%) and May (3.3%). In the eurozone, inflation proved more persistent than anticipated, fluctuating between 2.4% and 2.6% during the guarter against a backdrop of economic recovery. GDP growth in Q1 exceeded expectations in both Europe and the United States, with household consumption continuing to rise. PMI surveys from March to May signalled continued private sector growth in Europe, supported by services, despite ongoing industrial sector challenges. Inflationary pressures appeared stronger in the US than in Europe, as United States demand remained dynamic and exceeded its potential, unlike in Europe, where supply constraints dominated. The US Federal Reserve also maintained a cautious stance on the timing of its monetary easing cycle, influencing central banks in emerging markets, where currency risks remained a concern. Inflation in emerging economies remained higher than in developed countries, exacerbated by geopolitical uncertainties, volatile oil and gas prices, and sharp increases in wheat and copper prices. Lastly, the increase in expectations of central bank interest rate differentials partly weighed on emerging market currencies, sustaining high inflation through imported goods prices. In China, economic data was mixed, with weak domestic demand and sluggish inflation (0.2% in June). However, Chinese authorities continued supporting the real estate sector, notably through macroprudential measures and the conversion of unsold housing units into social housing. Despite trade tensions with the US and the risk of escalation, particularly with new tariffs on electric vehicles, solar panels, and lithium-ion batteries, China's export momentum remained intact in Q2.

In the third quarter (Q3) of 2024, geopolitical risks, uncertainties related to the US elections and fiscal policy choices in both Europe and the United States left economists in wait-and-see mode, between the scenario of a soft landing or a recession. The continued moderation in inflation in the United States (2.5% in August following 3.3% in May), in the eurozone (1.8% in September versus 2.6% in May) and in a majority of emerging markets enabled further rate cuts by central banks, in a context of relative economic resilience. Indeed, the acceleration in US GDP in Q2 surprised on the upside (3.0% guarter-on-guarter annualised vs. 2.0% expected and 1.4% in Q1), particularly household consumption. In addition, US GDP figures were revised upwards, notably household savings and income, which benefited from interest gains on investments and deposits during the rise in interest rates. In the United States, employment reports (particularly the rise in the unemployment rate to 4.3% in July vs. 4.1% expected, after a low of 3.4% in April 2023) as well as the deterioration in confidence surveys (notably in the manufacturing sector) indicated that the risk of recession was higher than that posed by persistent inflation. In the eurozone, although GDP growth was in line with expectations (0.2% q/q in Q2), this was due to the positive contribution of foreign trade and lower imports resulting from a contraction in domestic demand. Divergences within the region have increased, with a deterioration in activity in Germany, some resilience in Italy and France, and strong expansion in Spain. Elsewhere in Europe, the economic recovery in the UK continued in Q2, albeit at a more moderate pace, driven by public spending and private investment. With the new tax rules of the European Union and the new UK government, tax policy choices will impact economic activity, with uncertain multiplier effects over the coming years. In China, after lower-than-expected growth (0.7% g/g in Q2 vs. 0.9% expected and 1.6% in Q1), the authorities stepped up their support for the real estate and financial sectors at the end of September and signalled new measures in favour of domestic demand.

In the fourth quarter of 2024 (Q4), in developed countries, GDP growth in the third quarter was stronger than expected overall, thanks to household consumption, particularly in the United States, the eurozone and Japan. Disinflation led to an improvement in purchasing power against the backdrop of the resilience of the labour market and easing of financial conditions. However, during the fourth quarter, confidence indicators pointed to a slowdown in activity, driven by the continued decline in the manufacturing sector, despite a certain resilience in services. The trade and tax policies proposed by the new US administration from 2025 have exacerbated the business community's concerns. In Europe, the need to return to a balanced budget and the likelihood of higher taxes led to a further decline in consumer confidence, which could weaken consumption, the main pillar of economic activity. GDP growth forecasts for 20255 were revised downwards in the eurozone from +1.3% in September and to +1.0% in December, due to Germany (GDP revised to +0.4%2 vs. +1.0% in September), and in France (GDP revised to +0.7%2 vs. +1.1% in September⁶). In the rest of Europe, GDP growth forecasts in 2025 showed some resilience, but only Spain is expected to continue to grow relatively strongly at +2.2%, driven by favourable comparative advantages, particularly in terms of wage costs, energy prices and exposure to the tourism sector. Statistics in the United States confirmed US exceptionalism with solid growth in November, on the wage front (+4.0% y/y) and consumer spending (5.5% y/y), which tends to support inflation (2.7% y/y in November vs. 2.4% in September). US growth forecasts for 2025 continued to be revised upwards, from +1.8% in September to +2.1% in December. US exceptionalism contrasts with economies that are losing momentum amid trade tensions and the risk of tariff barriers. This environment is not expected to lead to inflationary pressures or wage-price spiral risks in 2025: inflation is expected to slow to 2.0% in the eurozone, to 2.1% in the United States, or at most stabilise at 2.5% in the UK, which would allow additional monetary easing, albeit of varying magnitude depending on the national context. Only monetary policies in Brazil and Japan will continue to stand out, with more rate hikes in 2025. In China, the authorities signalled that they were staying on course to increase credit support, and were willing to take exceptional measures. The moderation in economic activity should therefore remain relatively well controlled thanks to the good performance of the industrial sector and the beginning of a recovery in household consumption, which makes it possible to envisage a moderate slowdown2 in 2025 to 4.5% compared with 4.8% in 2024. In India, the consensus among economists is for GDP growth of 6.5%, slightly lower than the September forecast (6.9%) and compared with 8.2% in 2024. Lastly, in Latin America, the trend for 2025 is also slowing, particularly in Mexico, where the US free trade agreement will be called into question.

Regarding the energy transition

The energy transition theme was again under pressure. Geopolitical issues have taken precedence over environmental ambitions. The war in Ukraine has been ongoing for more than two years, leading to a sharp rise in inflation. Conflicts are developing around the globe and the notion of sovereignty seems to dominate political discourse. In addition, transition-related spending is facing budgetary imperatives, made even greater by the economic slowdown.

Even so, the challenges of global warming are even more crucial. At the current rate of release of CO2 into the atmosphere, the Global Carbon Budget team estimates that there is "a 50% chance that warming will exceed 1.5°C consistently in around six years" and definitively nullify the Paris Agreement target. On 11 November 2024, at the opening of COP29, the UN warned that this target was in "great danger", also recalling that it was now almost certain that 2024 would become the hottest year on record.

The planet has already warmed by 1.3°C since the pre-industrial era (1850-1900). However, the United Nations Environment Programme (UNEP) predicts warming of +3.1°C by the end of the century if climate policies do not drastically intensify.

31

⁵ Bloomberg consensus at 31/12/2024

⁶ Bloomberg consensus at 30/09/2024

The study, published in the journal Earth System Science Data, predicts that global CO2 emissions from fossil energy production and consumption will reach a record level of 37.4bn tonnes by the end of 2024, an increase of 0.8% compared to 2023. Although this is less than the momentum recorded at the beginning of the century (+2.8% on average annually between 2000 and 2009), the rate of increase is almost identical to that recorded during the last decade (+0.9% on average each year over the period 2010-2019).

Oil and natural gas are driving global emissions higher, with respective increases of 0.9% and 2.4%. Scientists consider the current levels of carbon dioxide removal by technology can only offset one millionth of the CO2 emitted by fossil fuels.

We have listed the highlights of the past year:

- Election of Donald Trump in November 2024: this election raises the question of the extension of the IRA, particularly its tax credit mechanisms. In his programme, it is clear that Donald Trump will ease the conditions for oil and gas drilling and the export of gas from the United States, but the IRA is expected to be modified marginally. Indeed, 14 Republican members of Congress opposed the repeal of tax credits given the impact on employment in their respective states. Conversely, Donald Trump may cut subsidies on electric vehicles. Lastly, tax cuts, the desire to repatriate industrial production to the US and the boom in investment in AI should increase electricity generation needs and support renewable energy
- Europe is moving fast but is unlikely to meet its 2035 emission reduction targets given the levels of emissions from road transport, the use of fossil fuels by manufacturers and electricity generation from gas. The United States' exit from the Paris Agreement will be a key test of the strength of European countries' commitments. Member States spent \$441bn in energy transition investments in 2023 and will have to more than double them to achieve their emission reduction targets. Investments in wind and electricity transmission will need to be increased by 80% and 71% respectively, with spending on the power grid tripling and spending on energy storage and carbon capture technologies increasing eightfold.
- COP 29 in Azerbaijan led to an increase in financing for developing countries, increased to \$300bn per year in 2035 compared with a commitment of \$100bn, previously considered largely insufficient. February 2025 is expected to be an important milestone, as the NDCs (National Determined Commitments) will be defined, setting the climate ambitions for the next 10 years.
- COP 29 also laid the foundations for a CO2 market between states by establishing reporting and the authorisation process. However, it will be necessary to wait for COP30 in Brazil for this market to become fully operational. At COP29, \$1bn of bilateral contracts have already been signed, notably between Norway and Switzerland.

- The UN plan to decarbonise the air transport sector known as Corsia began in its initial phase in 2025. 126 countries have committed to limiting emissions to 85% of their 2019 level. which should boost demand for SAF (sustainable aviation fuel).
- \$49 billion in credits have been allocated to the most polluting industries, such as mining, metallurgy and air transport. This makes it possible to take a first step towards net zero, for example by switching from coal to gas.
- The financial sector is also taking action. Indeed, 42% of the financial institutions grouped in the GFANZ (Glasgow Financial Alliance for Net Zero) have responded to the 10 elements of the energy transition plan and 90% of them have addressed more than 5 elements.
- We also note progress in the food and agriculture sectors, which generate 32% of global CO2 emissions, although stakeholders have yet to define a common approach to sustainability. Nonetheless, almost half of companies have set sustainability and regeneration targets, which remains relatively low.
- On the corporate front, the TPI Center State of Transition Report 2024 from the London School of Economics shows that 30% of companies from a panel of 1,000 worldwide are aligned with the 1.5° trajectory for 2050, four times more than the report published in 2021. The institute classifies the companies in the panel into five categories, with 82% of the companies being at least at level 3 of this classification.

Subfund performance and decisions

As in 2022 and 2023, the rising interest rate environment put particular pressure on thematic and long-duration equities of the HRIF Europe Equity Green Transition subfund. Our thematic strategy exposed to green growth suffered from a positioning on growth stocks, particularly in Q1 2024, mainly due to the decline in renewables, then in Q4 2024, after Donald Trump's election and when the Fed maintained a "higher for longer" stance, with two interest rate cuts of 50 bps anticipated in 2025 instead of the four initially expected.

As in 2023, it was shares with the highest green intensity or the best ESG quartiles that underperformed. Shares in eco-sectors such as renewable energy, circular economy and sustainable transport-mobility recorded the weakest contributions.

Firstly, the renewable energy eco-sector was particularly affected by utilities and industrials in the sector. The underperformance of this eco-sector accounts for nearly half of the underperformance relative to the benchmark. In addition to the valuation problems linked to the rise in interest rates, this is linked to specific factors.

Although 2023 was marked by profit warnings from Siemens Energies and Orsted, the start of 2024 was particularly difficult for players given a combination of factors: a mild winter, a high level of gas storage, filled reservoirs, a decline in industrial production and in some countries such as Spain, a surplus of electricity production during the day linked to the expansion of solar power. This led to a drop in gas prices and, consequently, a drop in electricity prices, which reached €32 in Spain at the end of February 2024. The decline in this eco-sector at the end of the year can be explained by the election of Donald Trump, raising concerns about the sustainability of tax credits in the United States, and especially by the strong resilience of the US economy. In the face of good employment figures and still relatively high inflation, the Fed revised its rate reduction plan.

These elements are further compounded by idiosyncratic factors. EDPR faced development problems in Colombia and was forced to abandon its presence there. The Group lowered its estimates of gains on disposal, as well as its capacity development plan and its level of electricity generation, all of which led to a downward revision of its earnings estimates and its valuation.

33

Vestas, the Danish wind turbine leader, also disappointed. Indeed, analysts raised accounting points demonstrating the fragility of the recovery in its margins. We also sold our position based on this reasoning. The downward revision of its profitability outlook in 2024 due in particular to the strength of services and the departure of its CFO showed that analysts' fears were justified.

Our positions in the circular economy eco-sector such as Norsk Hydro, Stora Enso and Croda contributed to a quarter of the relative performance. Beyond stock-specific issues, we were faced with a size effect. In addition, stocks in this eco-sector are often comprised of intermediate goods, essentially products used in the early stages of the cycle. They have been particularly affected by inventory reduction, the slowdown of the Chinese economy and more broadly the global economic downturn.

The same applies to the sustainable mobility eco-sector, which is heavily affected by the slump in the European automotive sector. Manufacturers are facing a backlash in demand for electric cars, which are considered too expensive, too restrictive in terms of usage and with uncertain resale value. They are caught between a rock and a hard place, with the rock of regulation imposing fines for failing to meet electric vehicle penetration targets, and the hard place of weak consumer demand, while quality issues with new models are multiplying.

Despite the downturn in the property sector, we managed to stand out in green buildings thanks to our strong conviction on Saint-Gobain, the third-largest positive contributor to relative performance. While the market was expecting prices to fall in a context of declining volumes, industry leaders managed to maintain a positive price-cost spread and thus increase their gross margin. The US market was also more resilient than expected. Conversely, SIKA was one of the biggest detractors from our relative performance. While its earnings estimates were slightly revised downwards, the stock saw a sharp de-rating, with its valuation dropping from 33 times 12-month forward earnings to 25 times currently.

The contribution of the energy efficiency eco-sector was positive thanks to Belimo, a Swiss company that produces modules to optimise flows within buildings. This medium-sized company has developed practical and efficient solutions to save energy. The major players in electrification such as Schneider, ABB and Prysmian stood out. 2024 saw the announcement of massive investments to restructure the electricity grids on both sides of the Atlantic in order to respond to new methods of electricity production and consumption. Countries such as Germany, Belgium and the Netherlands have revised the remuneration framework for regulated grids, with ROEs of around 8% to 10% in Germany and at least 8% in Belgium. In the United States, some countries are facing power supply disruptions and are making significant investments, especially as the rise of data centres is likely to put grids under even greater strain in the future.

Also in this eco-sector, ST Microelectronics issued two profit warnings given its exposure to the automotive sector, the industrial sector given its leadership in micro-controllers and certain major customers such as Apple. Above all, the volume obligation clauses signed during the post-lockdown component shortages ended in June, triggering massive destocking by distributors. We replaced our position in STM with Infineon.

Lastly, it is worth noting the positive contribution of diversification stocks, led by Munich Re, the world leader in reinsurance, which took advantage of the rise in rates to solidify its reserves.

The transactions carried out were aimed at protecting the portfolio's performance. We sold companies whose business models seemed too weak, such as NIBE Industrier, Bravida, Vestas, Bucher Industries and Stora Enso.

Taking advantage of the market downturn, we decided to strengthen our portfolio in several waves, bolstering our convictions around investments in power grids by building a significant position in Eon, and in software – a sector less sensitive to cyclical shocks – through SAP.

We also reduced our position in the renewables sector by selling Acciona and Encavis, which was acquired by KKR with a premium of over 50%.

Given the instability in France and the challenges in restoring government finances, we chose to reduce our exposure to French equities in two phases during the second half of the year by trimming all our positions. We chose to sell Carrefour, which is sensitive to the decline in French consumers' purchasing power.

We reinvested in companies with a solid order book, such as CAF, a railway equipment construction company in Spain, and WeBuild, an Italian leader in construction, specialising in infrastructure projects, particularly green mobility.

Lastly, we spread our risks by halving our line in ASML and reinvesting the proceeds in ASMI, which we believe has a better growth profile.

Outlook

The market is waiting for Donald Trump to take office and is already anticipating the measures that will be taken, particularly the level of tariffs. The recent trend has been to raise expectations for growth in the US economy and to lower expectations for Europe, which is struggling to define a political response to the challenges posed by the new geopolitical situation.

The economic recovery is now postponed from the second half of 2024 to the second half of 2025, following a phase of very weak economic growth.

Despite these uncertainties, it is possible for the coming year to identify a number of positive factors for equities, in particular for our strategy.

- Normalisation of China: China was one of the main sources of disappointment in 2023 and 2024, with a continuous revision of the economic outlook amid the real estate crisis. Economic agents have massively de-stocked. The authorities are seeking to revitalise the economy and attract foreign investment again.
- **Relocation**: one of the main lessons of the crisis of the last two years is that it is necessary to create safer and more localised supply chains in a range of sectors such as renewable energy and semiconductors. This creates a new demand for industrial hubs and automation technologies.
- Maintenance of gross margin: The ability of companies retain a large portion of price increases while production costs were falling was certainly one of the major positive surprises of 2023 and 2024. This effect should continue, even though we are beginning to see some cracks in prices due to weak volumes. However, overall, companies remain quite disciplined.
- Cost control: Many companies have announced a streamlining of their system. Some major trends are emerging, such as local to local, i.e. organisation by continent and decentralisation of operational decision-making with the corollary of adjusting central services.
- Concrete investments dedicated to clean energy...: the effects of investments brought about by the REPowerEU action plan and the IRA are effective from 2024, more likely in 2025. The European Commission is entering a more concrete phase with the implementation of action plans such as the European Wind Power Action published in November 2023.

- ...But even more effort is needed: To achieve the goals of COP 28, \$4.3 trillion per year must be invested in clean energy until 2030 to achieve the zero emissions target by 2050. In addition, financing needs for developing countries to adapt to the new environmental context are estimated at between US\$215 billion and US\$387 billion per year by 2030, which is 10-18 times higher than the current pace.
- Major investments in electrification: In order to achieve its ecological transition, Europe must invest close to €600 billion in high-voltage lines, transformers and cables by 2030. This represents an unprecedented need for investment in the power grid.
- Valuation at the level of historical averages: the very sharp devaluation observed from 2022 to 2024 opened up attractive return prospects for equities. In fact, the P/E of the MSCI Europe index at 13.3 times is in line with the historical average, with EPS growth of 9%, a level that could be adjusted downward to 3% to 5% growth given the current economic environment.
- Acceleration of the climate crisis: The effects of global warming are becoming more extreme and earlier, while the gap between the commitments made at COP21 and what has been achieved is growing. Governments have now entered an action phase, increasing pressure on economic agents despite a lack of budgetary flexibility.

As we conclude this annual review, it is important to recall the ambition of our Energy Transition strategy for European equities: investing in companies that are positioned to take advantage of the structural growth of decarbonisation solutions.

The energy transition will take several decades, and companies that offer solutions to this challenge are therefore set to experience long-term growth. As such, our subfund naturally has a higher earnings growth profile than a generic European equity index.

The subfund's ESG criteria, which are exposure to companies with a significant share of revenues tied to the energy transition, the exclusion of companies with a low ESG score (bottom quartile by sector), the preference for companies with significant avoided carbon emissions (according to the Carbon4Finance database), the preference for companies with a climate trajectory, and good governance, create high barriers to entry for candidates for the strategy and bring strong integrity to our investment process. We carefully select companies that present these qualitative criteria and have low leverage on average.

The active part of the subfund is close to 90%, reflecting the fact that climate change opportunities, growth and quality companies that actively contribute to the energy transition, are not predominant in general indexes. Recall that the strategy has significant sector biases and a high tracking error, which we believe justifies the need to assess performance over the medium term.

The long-term outlook for the strategy is unchanged or even reinforced with strong growth opportunities linked to each of the eco-sectors in our climate taxonomy. The decarbonisation targets are stepped up by the various stimulus plans and the green capex deployed by companies in their desire to implement "net zero" strategies that will enable them to reduce their net CO2 emissions by 2050. More than ever, governments need to promote energy savings by accelerating energy renovation plans. Electrification is becoming more widespread at the expense of fossil fuels, especially gas. These factors will continue to support the stocks in our theme for a long time. It should be stressed that if the plans such as REPowerEU and IRA have been passed, their application will take place in 2023. Regulatory changes in favour of the circular economy will contribute to streamlining the use of materials and energy needs.

The portfolio is constructed to take advantage of the growth inherent in the development of green activities that enable the transition to a low-carbon economy. The strategy focuses on quality stocks exposed to green growth, at a reasonable price, with a focus on players that consistently take all sustainability criteria into account in their strategy.

Performance

At the close of the year, the subfund's performance was -3.12% for the AC and AD shares (coupons reinvested), -2.37% for the BC and IC shares, -1.95% for the K C-D share (coupons reinvested) and -1.63% for the ZC share. The SC and ID shares (coupons reinvested) are inactive.

For the sake of comparison, the performance of the benchmark "for information" was 11.68%.

Past performance is not an indicator of the future results of the SICAV subfund.

Information on distributed income eligible for the 40% tax allowance

In accordance with the provisions of Article 41 sexdecies H Annex III of the French General Tax Code, income from distributing unit classes is subject to a 40% tax allowance.

PEA

Pursuant to the provisions of Article 91 *quater* L of the French General Tax Code, Annex 2, at least 75% of the subfund is invested at all times in securities and interests referred to in a and b of paragraph 1° of I of Article L. 221-31 of the French Monetary and Financial Code.

Proportion of actual investment during the year: 77.10%

Information on environmental, social, and governance (ESG) criteria

In accordance with Article L.533-22-1 of the French Monetary and Financial Code, the policy on including environmental, social, and governance quality (ESG) criteria in the investment strategy is available on the management company's website at www.assetmanagement.hsbc.fr.

Further information on the inclusion of ESG criteria in the investment policy over the fiscal year

The Transparency Code for the subfund is publicly available at www.assetmanagement.hsbc.fr and provides detailed information on the theme-based "energy transition" approach and the integration of ESG criteria of the subfund.

"SFDR" appendix to Regulation (EU) 2019/2088 and its implementing technical standards

In addition, the subfund has a sustainable investment objective under Article 9 of Regulation (EU) 2019/2088 of 27 November 2019 on sustainability-related disclosures in the financial services sector ("SFDR").

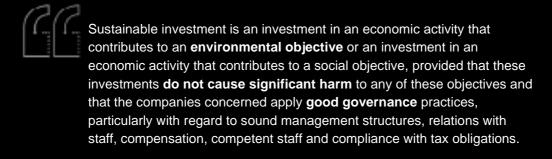

Information on environmental or social characteristics is available in the SFDR appendix of the annual report.

The management company's sustainable investment methodology is as follows:

Sustainable investment within the meaning of Article 2(17) of the European SFDR

The SFDR (EU Regulation 2019/2088 of the European Parliament and of the Council of 27 November 2019) on sustainability-related disclosures in the financial services sector comes into force in 2021, with the obligation for financial institutions to be transparent in their communication on sustainable investment strategies that incorporate environmental, social and governance (ESG) issues.

Under this regulation, as provided for in Article 2, point |17| of the SFDR, sustainable investment is defined as an investment that generates positive environmental and/or social outcomes. The challenge for asset managers has been to define and calculate the net positive contribution of companies to environmental and social issues, while ensuring that this positive contribution is not accompanied by negative impacts.

Article 2|17| of EU Regulation 2019/2088 on sustainability-related disclosures in the financial services sector (SFDR).

How is the sustainable contribution of issuers measured?

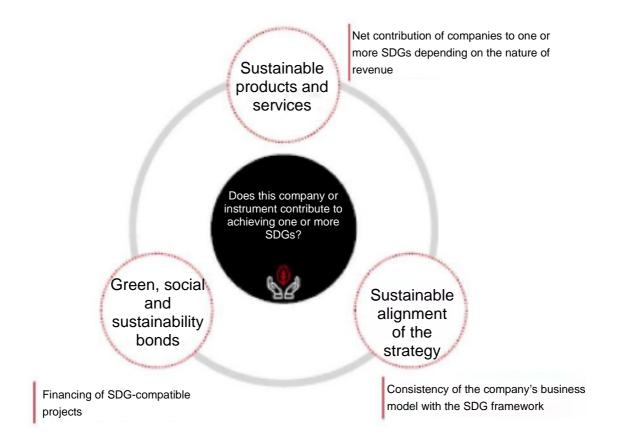

- We have developed a proprietary methodology to determine whether an instrument/issuer can be defined as a "sustainable investment" within the meaning of SFDR Article 2(17) and whether it can be taken into account in the calculation of the proportion of sustainable assets in portfolios.
- Since 2022, our methodology has evolved from seeking to align revenue with the United Nations Sustainable Development Goals (SDGs) to a broader approach that also incorporates the sustainable quality of issuers' business models, operations and sustainability strategies. This broadening of the scope of analysis better reflects the commitment and actions taken by companies to meet the challenges of sustainable development.
- Our assessment also includes a verification of the principle of Do No Significant Harm (DNSH) while taking good governance practices into account. This review takes into account the principle adverse impacts (PAI) in accordance with the SFDR. PAIs are a selection of environmental and social indicators to consider and report on, including greenhouse gas (GHG) emissions, carbon intensity and footprint, discharges and gender pay gaps.

Overview of the general investment process, which may differ depending on the product, the customer's mandate, or market conditions

Assessing the sustainable quality of an investment

Our methodology is based on the assessment of an investment's ability to contribute to the United Nations Sustainable Development Goals (SDGs) and has three dimensions¹:

An in-depth analysis is carried out on the basis of several external data sources, as well as internal analyses and research. These data sources include Sustainalytics, S&P Trucost and FTSE Green Revenue, as well as our proprietary databases on companies' green shares and their eligibility for the European taxonomy².

Based on sustainability thresholds defined for each of the analysed criteria (see details on page 3), issuers/instruments will be considered sustainable if they meet at least one of the three dimensions mentioned above.

Source: HSB Asset Management

Overview of the general investment process, which may differ depending on the product, the customer's mandate, or market conditions

40

⁽¹⁾ These three dimensions and their respective thresholds or indicators may be subject to change over time, without notice, depending on, for example, regulatory changes or clarifications, data availability, technological progress, etc. The parameters are as of the date indicated.

⁽²⁾ The European taxonomy refers to the classification of economic activities with a positive impact on the environment. Its objective is to direct investments towards sustainable – i.e. "green" – activities. https://finance.ec.europa.eu/sustainable-finance/tools-and-standards/eu-taxonomy-sustainable-activities en

The three dimensions of sustainability¹

3

To what extent does an investment contribute to one or more of the 17 SDGs?

Sustainable products and services

Current or expected sustainable net revenue in 3-5 years >=30%

Measure of the percentage of sustainable net revenue aligned with one or more of the 17 SDGs = measure of current or future revenue aligned with at least one of the SDGs (CAPEX², OPEX³ or EBITDA⁴), minus non-sustainable products and services, tobacco, thermal coal, prohibited weapons, the most severe environmental, social and governance (ESG) controversies, etc.

Quantitative score

Sustainable alignment of the strategy

Business models

Sustainable assessment of the business model: >=50% of the assessment questionnaire responses must obtain the highest score.

Assessing the sustainable quality of a company's business model integrates its operations and value chain, its sustainable development strategy and the management of the impacts of its activities on its environment and on communities. The positive contribution is identified based on alignment with the SDGs⁵.

Proven & verified (SMART⁵)

Sustainable theme

Thematic revenue of the company >=20%

or Assessment of the sustainable theme >=30%

These thresholds are tailored to emerging sustainable themes in industries that are still growing and/or fragmented, such as the circular economy.

Ambitions and practices

Progress made by the company in implementing its growth strategy verified on the basis of relevant indicators established by competent market bodies, for example credible carbon emission reduction targets approved by the Science Based Targets initiative (SBTi⁶).

Energy transition pathway

Assessment of activities that contribute to the energy transition based on the identification of the green share of the company's products and services (as a percentage of revenue) that makes it possible to finance the energy transition and the transition to renewable energies.

A company is considered a "sustainable transition asset" based on the intensity of its green share and criteria aligned with the Towards Sustainability label⁷ for the traditional energy (Oil & Gas) and power generation sectors.

Green, social and sustainability bonds

Use of bond issue proceeds in a sustainable business

For fixed income instruments, we view green, social and sustainability bonds as sustainable investments due to their clear and direct contribution to environmental and social goals. Green, social and sustainable bond instruments, as defined by the International Capital Market Association ("ICMA")⁸ and structures in accordance with its principles or guidelines, contribute, by their very design, to achieving environmental and/or social objectives aligned with the SDGs.

¹ These three dimensions and their respective thresholds or indicators may be subject to change over time, depending on, for example, regulatory changes or clarifications, data availability, technological progress, etc.

² Capital expenditure or CÁPEX, representing the capital invested for a company to acquire or modernise fixed, physical or non-consumable assets. Investment expenditures are primarily one-time investments in non-consumable assets used to maintain the existing operating levels within a company and to promote its future growth. Investment expenses server to buy or invest in tangible assets, such as real estate assets, raw materials, factories, buildings and equipment, which benefit the company beyond a single fiscal year. Intangible and non-physical assets, such as patents and licences, may also be considered as capital expenditure.

Operating expenses, or OPEX, include green costs, overheads and administrative costs, which are costs incurred as part of the main activities of the company, or overheads.
 EBITDA (earnings before interest, taxes, depreciation and amortisation) is another measure of a company's profitability other than net profit. By eliminating

* EBITDA (earnings before interest, taxes, depreciation and amortisation) is another measure of a company's profitability other than net profit. By eliminating non-cash depreciation charges, as well as taxes and debt costs dependent on the capital structure, EBITDA attempts to represent the cash profit generated by the company's activities.

⁵ Specific, measurable, achievable, realistic and time-bound

⁶ Science-based targets provide companies with a clear path to reduce their greenhouse gas emissions, thereby helping to prevent the worst effects of climate change and preparing businesses for future growth. The targets are considered "science-based" if they are aligned with what the latest climate science deems necessary to meet the goals of the Paris Agreement, namely limiting global warming to 1.5°C above pre-industrial levels.

Source: HSB Asset Management

Overview of the general investment process, which may differ depending on the product, the customer's mandate, or market conditions

Do no significant harm principle

4

Our methodology verifies the absence of significant harm (DNSH) while taking good governance practices into account.

Our sustainable investments meet the requirements of the DNSH principle as defined by the SFDR (article 2(17) to the extent that they apply our exclusion policy detailed below:

DNSH principle – exclusions

For corporate bonds:

- Controversial and banned weapons score ²
- Revenue from tobacco production > 0%³
- Revenue from coal mining > 10%³
- Revenue from energy production via thermal coal > 10%³
- Non-compliance with the United Nations Global Compact ^{3,4}
- Reporting of the most serious controversies³

For government bonds:

- Reporting a breach with regard to a social issue³
- Any country on the HSBC sanctions list

The DNSH principle is examined in the same way as the good governance of the companies held in the portfolio, which forms the basis of our fundamental analysis and investment process.

Assessment of governance practices

- Our reflection process goes beyond governance scores and ESG scores. The quality of governance is assessed
 on the basis of criteria specified in the investment process, including ethics, corporate culture and values,
 governance structure and corruption.
- We determine the materiality of governance through an analysis of the governance structure, controversies, compliance with the principles of the UN Global Compact and the OECD guidelines for multinational companies.
- At a minimum, we exclude the most severe controversies for our actively managed funds.

Overview of the general investment process, which may differ depending on the product, the customer's mandate, or market conditions

⁽¹⁾ At end-December 2022.

⁽²⁾ The data comes in particular from ISS-Ethix

⁽²⁾ The data comes in particular from Sustainalytics. Examples of controversies: activities related to child labour, major environmental damage, corruption, pollution, etc.

⁽³⁾ The United Nations Global Compact is a voluntary initiative based on the commitment of companies to implement universal principles of sustainable development and build partnerships to support the United Nations goal: https://unglobalcompact.org/.

Spotlight on the Sustainable Development Goals

5

The 2030 Sustainable Development Agenda, adopted by all member states of the United Nations, establishes a common plan for peace and prosperity for people and the planet, now and in the future.

At the heart of this agenda are the 17 SDGs, which call for action by all countries – both developed and developing – under a global partnership.

These goals were designed with the understanding that eradicating poverty and other deprivation must go hand in hand with strategies to improve health and education, reduce inequalities and stimulate economic growth, tackle climate change and work to preserve our oceans and forests.

For more information, please visit https://sdgs.un.org/goals.

Additional information relating to Shareholder Rights Directive II (SRD2)

Contribution to medium- and long-term performance

During the period under review, the investment strategy was implemented in a disciplined manner and yielded results in line with expectations, giving us confidence that we will achieve the performance and risk management objectives over the recommended investment period for this subfund.

The investment strategy aims to identify companies that contribute to green growth and the decarbonisation of society. Within this investment sub-universe, investments will be made in companies with the highest ESG ratings in their sector and profitability and growth prospects not fully reflected in their valuations.

The integration of non-financial factors (environmental, social, and governance) into the analysis of investment cases allows us to better assess the soundness and sustainability of the business model(s) of the examined company and therefore to integrate into its valuation any elements of risk or opportunities that the mere analysis of its financial statements might not have identified

• Main significant risks

The subfund incurs primary and secondary risks, which are listed in the subfund's prospectus.

Turnover rate

Portfolio turnover rate: 30.88%

The SEC method is used to calculate the turnover rate: Annual TO = Min (Purchase of securities; Sale of securities) / Average AUM

Management of conflicts of interest

During the past fiscal year, there were no conflicts of interest related to engagement activities.

During this period, the management company decided to use a voting advisor, Institutional Shareholder Services (ISS), for engagement activities.

Securities lending

The management company did not engage in securities lending during the past fiscal year.

Information about investment decisions

Investment decisions are based on fundamental analysis of the companies included in the investment universe. Markets are not always efficient and do not always reflect the intrinsic value of companies.

In this context, investment decisions are based on long-term fundamental analysis, thus enabling us to take advantage of these opportunities arising from the excessive volatility of financial markets.

The management processes are based on exploiting the data from the fundamental analysis conducted by our independent research teams, whether in the short, medium or long term. Furthermore, regardless of the asset class, the consideration of Environmental, Social, and Governance risks and opportunities (E.S.G. integration) is an integral part of the security selection process of the manager of the subfunds concerned with the objective of long-term outperformance.

Incidents affecting the subfund during the fiscal year and forthcoming

4 June 2024

Update of regulatory documentation with the following changes:

- ✓ Update of recurring costs and performance scenarios in the Key Information Documents (KID)
- ✓ Update of the risk scale from 5 to 4 in the Key Information Documents (KID)
- ✓ Information on the HSBC Group's responsible investment policies (coal policy and energy policy) has been specified in the prospectus and the SFDR appendix.

> 1 January 2025

Update of regulatory documentation with the following changes:

The "SRI" label and the "Towards Sustainability" label will not be renewed. This subfund will retain the "Greenfin" label and therefore apply new exclusions. The benchmark index used for information purposes has also changed: the MSCI Europe IMI GDP Weighted Net Return replaces the MSCI Europe GDP Weighted.

In addition, in accordance with the changes to the French Financial Markets Authority (AMF) introduced by the regulations dated 6 October 2022, "operating and other service charges" may be deducted based on actual costs (the existing method) or based on a predefined flat rate, in both cases up to the maximum rate provided for in the prospectus.

With effect from 1 January 2025, HSBC Global Asset Management (France) has decided to deduct operating and other service charges based on a predefined flat rate.

The flat rate mentioned in the SICAV's prospectus will therefore be deducted even if the actual costs are lower than this rate. Conversely, if the actual costs are higher than the stated rate, the amount in excess of that flat rate will be borne by the management company.

Lastly, the wording of the following paragraphs of the prospectus will be updated:

- ✓ Restrictions on the issuance and redemption of units for US Persons
- ✓ Restrictions on the issuance and redemption of units for Canada residents
- ✓ Provisional measures prohibiting subscriptions to the fund from 12 April 2022.

Information relating to efficient portfolio management techniques and derivatives used by the subfund of the SICAV, pursuant to AMF position No. 2013-06

Efficient portfolio management techniques

As of the close of the fiscal year, the subfund of the SICAV did not use efficient portfolio management techniques.

Derivatives

As of the close of the fiscal year, the subfund of the SICAV did not use derivatives.

Aggregate exposure

The commitment method is used to calculate the aggregate exposure on financial futures.

Notes

A. General information

A1. Characteristics and activity of the open-ended UCI

A1a. Investment strategy and profile

The subfund's investment objective is to maximise performance over the recommended investment period of five years by investing in equities issued by European companies that provide the solutions necessary for the decarbonisation of players in the energy and ecological transition. Portfolio companies are selected for their best environmental, social, and governance practices and for their financial quality.

The UCI's prospectus provides a full and accurate description of these characteristics.

A1b. Characteristics of the UCI over the last 5 financial years

A2. Accounting policies

The annual financial statements are presented for the first time in the form prescribed by ANC regulation 2020-07, as amended by ANC regulation 2022-03.

1 Changes in accounting methods, including presentation, in connection with the application of the new accounting regulation relating to the annual financial statements of undertakings for collective investment with variable capital (ANC regulation 2020-07 as amended)

This new regulation imposes changes in accounting methods, including changes in the presentation of annual financial statements. Comparability with the financial statements for the previous financial year cannot therefore be achieved.

NB: the statements concerned are (in addition to the balance sheet and the income statement): B1. Change in equity and financing liabilities; D5a. Allocation of distributable amounts relating to net income and D5b. Allocation of distributable amounts relating to net realised gains and losses.

Thus, in accordance with the second paragraph of Article 3 of ANC Regulation 2020-07, the financial statements do not present data from the previous financial year; the previous year's financial statements are included in the notes to the financial statements.

These changes mainly concern:

- the balance sheet structure, which is now presented by types of eligible assets and liabilities, including loans and borrowings;
- the structure of the income statement, which is extensively modified; the income statement includes in particular: exchange rate differences on financial accounts, unrealised gains and losses, realised gains and losses, and transaction fees;
- the removal of the off-balance sheet table (part of the information on the items in this table is now included in the notes):
- the removal of the option to recognise costs included in the cost price (without retroactive effect for funds previously applying the included costs method);
- the distinction between convertible bonds and other bonds, as well as their respective accounting records;
- a new classification of target funds held in the portfolio according to the model: UCITS / AIF / Other;
- the recognition of forward foreign exchange commitments, which is no longer done on the balance sheet but off-balance sheet, with information on forward foreign exchange contracts covering a specific portion:
- the addition of information relating to direct and indirect exposures to the various markets;
- the presentation of the inventory, which now distinguishes eligible assets and liabilities from forward financial instruments;
- the adoption of a single presentation model for all types of UCI;
- the removal of account aggregation for funds with subfunds.

2 Accounting rules and methods applied during the financial year

General accounting principles apply (subject to the changes described above):

- true and fair view, comparability, going concern;
- accuracy, reliability;
- prudence;
- consistency of accounting methods from one period to the next.

The interest cash basis is used to recognise revenue from fixed-income securities.

Purchases and sales of securities are booked excluding expenses.

The euro is the reference currency for the portfolio's accounting.

The duration of the reporting period is 12 months.

Asset valuation rules

The asset valuation rules applied by the accounting manager are outlined below according to the instruments held by the subfund:

The subfund has adopted the euro as the reference currency.

The prices used for the valuation of securities traded on the stock exchange are the closing prices.

The prices applied for the valuation of bonds are an average contributor. Funds are valued at their last known price.

Negotiable debt securities with a residual life of more than three months are valued at the market rate, with the exception of variable-rate or adjustable-rate negotiable debt securities not presenting any particular market sensitivity.

A simplified method known as "linearisation" is applied for negotiable debt instruments whose residual lifespan is less than three months with no particular sensitivity to the market on the basis of the crystallised three-month rate.

Repurchase agreements are valued at the contract price.

Firm and optional forward transactions and swap transactions made on OTC markets and authorised under the applicable fund regulations are measured at their market value or at an estimated value using methods chosen by the management company. Interest rate and/or currency swaps are valued at their market value based on the price calculated by discounting future cash flows (principal and interest) at the prevailing market interest and/or exchange rates.

European and foreign futures are valued using their settlement prices.

Interest rate and foreign currency swaps are valued under market conditions.

The valuation of interest-rate swaps against share performance is carried out:

- under market conditions for the fixed income branch
- according to the underlying security rate for the equity branch.

The valuation of Credit Default Swaps (CDS) stems from a model used by the spreads market.

Off-balance-sheet commitments in the European and foreign futures markets are calculated as follows:

- FUTURES

(Qty x Nominal x Daily price x Contract currency)

OPTIONS

(Qty x delta) x (Nominal of underlying instrument x Daily price of underlying instrument x Contract currency).

For swaps, the off-balance-sheet commitment corresponds to the nominal value of the contract plus or minus the interest differential and the unrealised capital gain or loss on the closing date.

Transaction fees are recognised in specific accounts of each subfund and are not added to the price.

Financial instruments whose prices were not determined on the day of valuation or whose prices have been adjusted are valued at their probable trading price under the responsibility of the Management Company. These valuations and the associated justification are provided to the statutory auditor for auditing purposes.

Valuation of financial guarantees

Collateral is valued daily at the market price (mark to market).

Haircuts can be applied to collateral received in the form of securities according to the level of risk.

Margin calls occur daily unless otherwise indicated in the master agreement covering these transactions on in case of agreement between the Management Company and the counterparty on the application of a trigger threshold.

Management fees

Financial management fees and administrative fees external to the management company cover all fees charged directly to the subfund, with the exception of transaction fees. Transaction fees include intermediation fees (brokerage, stock exchange taxes, etc.) and activity fees, where applicable, which may be collected in particular by the depositary and the management company.

The following fees may be payable in addition to financial management fees and costs of administrative services external to the management company:

- performance fees. These commissions are paid to the management company when the subfund has exceeded its targets. They are therefore charged to the subfund;
- activity fees charged to the subfund;
- a share of the income from temporary purchases and sales of securities.

In the event of an increase in administrative fees external to the management company equal to or less than 0.10% including tax per year, the subfund's shareholders may be informed by any means.

In that case, the management company will not be required to notify the shareholders in any particular way or offer the option to redeem their shares free of charge.

	Face abanced to the				Scale	rate		
	Fees charged to the subfund	Base	AC and AD shares:	IC and ID shares:	SC shares:	K C-D shares:	ZC shares:	BC shares:

2	Operating and other service charges (**)	Daily net assets	Maximum 0.30% incl. tax					
3	Maximum indirect costs (charges and management fees)	Daily net assets	Immaterial(***)					
4	Transaction fees	Deducted from each transaction	None					
5	Outperformance fee	Daily net assets			Non	e		

^{*} A percentage of management fees may be passed on to third-party marketing agents in return for marketing the subfund.

I. Fund registration and listing fees:

- fees related to the subfund's registration in other Member States (including fees charged by advisors (lawyers, consultants, etc.) for carrying out marketing formalities with the local regulator on the asset management company's behalf):
- fees for listing the subfund and publishing net asset values to keep investors informed;
- distribution platform fees (excluding retrocessions), relating to agents in foreign countries that perform a distribution function

II. Costs for keeping clients and distributors informed

- the costs of drafting and distributing KIDs, prospectuses and regulatory reports;
- the costs of providing regulatory information to distributors;
- the costs of providing information to unitholders by all means;
- information specific to direct and indirect holders; 3: Letters to holders;
- website administration costs;
- translation costs specific to the subfund.

^{**} Operating and other service charges include:

III. Data costs

- costs of data used for redistribution to third parties;
- costs for auditing and promoting labels (e.g. SRI label, Greenfin label)

IV. Depositary, legal, audit, tax fees, etc.

- statutory audit fees;
- depositary fees;
- fees for delegation of administrative and accounting management;
- tax-related fees including those of lawyers and external consultants (recovery of withholding tax on behalf of the fund, local tax agent, etc.);
- legal fees specific to the subfund;
- Costs of creating a new subfund, amortisable over 5 years.
- V. Costs relating to compliance with regulatory obligations and regulatory reporting
- fees for submitting regulatory reports to the regulator specific to the subfund;
- fees for compulsory professional associations
- operating charges for deployment of voting policies at General Meetings

The following costs may be added to the above-listed fees charged to the subfund:

- contributions due for the management of the subfund pursuant to Article L. 621-5-3-II-4° of the French Monetary and Financial Code;
- exceptional and non-recurring taxes, levies and government duties (in relation to the subfund);
- exceptional and non-recurring costs for the recovery of receivables (e.g. Lehman) or proceedings to assert a right (e.g. class action).

Swing pricing

The management company has implemented a swing pricing mechanism to adjust the net asset value of each of the subfunds once a trigger threshold is reached in order to protect the interests of the unitholders present in each of the subfunds.

Under this mechanism, investors bear the portfolio adjustment costs — including transaction fees, bid/offer spreads and taxes or fees applicable to the UCI — relating to investments or disinvestments when there are significant numbers of subscriptions and redemptions.

When the net balance of investor subscription and redemption orders exceeds a predefined threshold, called the "trigger point", the NAV is adjusted.

The NAV is adjusted up or down if the balance of subscriptions—redemptions is respectively positive or negative, so as to take into account the readjustment costs attributable to the net subscription and/or redemption orders.

The trigger threshold is expressed as a percentage of the subfund's net assets.

^{***}The subfund invests less than 20% in UCIs

The parameters for the trigger point and the NAV adjustment factor are determined by the Management Company and periodically reviewed.

The adjusted ("swung") NAV is the subfund's only NAV and is therefore the only NAV published and communicated to unitholders.

By applying swing pricing with a trigger threshold, it is possible that the UCI's volatility will not come from only the volatility of the financial instruments in the portfolio.

In accordance with the regulatory provisions, the management company does not communicate the trigger points and ensures that internal communication channels are restricted so as to safeguard the confidential nature of the information.

Appropriation of distributable amounts

Definition of distributable amounts

Distributable amounts consist of the following:

Income:

Net revenue plus retained earnings and plus or minus the balance of the accrued income account.

Gains and losses:

Capital gains realised, net of costs, minus realised losses, net of costs, recognised during the fiscal year, plus net gains of the same type recognised in previous fiscal years that were not distributed or accumulated, plus or minus the balance of accrued gains.

The amounts referred to as "income" and "gains and losses" may be distributed, in whole or in part, independently of each other.

Distributable sums are paid within a maximum period of five months following the end of the financial year.

Where the UCI is authorised under Regulation (EU) No. 2017/1131 of the European Parliament and of the Council of 14 June 2017 on money market funds, by way of derogation from the provisions of I, distributable sums may also include unrealised gains.

NOTES TO THE ANNUAL FINANCIAL STATEMENTS

1. Accounting policies

The annual financial statements are presented in the form prescribed by ANC regulation no. 2014-01, as amended.

General accounting principles are applied:

- true and fair view, comparability, going concern;
- accuracy, reliability;
- prudence:
- consistency of accounting methods from one period to the next.

The interest cash basis is used to recognise revenue from fixed-income securities.

Purchases and sales of securities are booked excluding expenses.

The euro is the reference currency for the portfolio's accounting.

The duration of the reporting period is 12 months.

Asset valuation rules

The asset valuation rules applied by the accounting manager are outlined below according to the instruments held by the subfund:

The subfund has adopted the euro as the reference currency.

The prices used for the valuation of securities traded on the stock exchange are the closing prices.

The prices applied for the valuation of bonds are an average contributor. Funds are valued at their last known price.

Negotiable debt securities with a residual life of more than three months are valued at the market rate, with the exception of variable-rate or adjustable-rate negotiable debt securities not presenting any particular market sensitivity.

A simplified method known as "linearisation" is applied for negotiable debt instruments whose residual lifespan is less than three months with no particular sensitivity to the market on the basis of the crystallised three-month rate.

Repurchase agreements are valued at the contract price.

Firm and optional forward transactions and swap transactions made on OTC markets and authorised under the applicable fund regulations are measured at their market value or at an estimated value using methods chosen by the management company. Interest rate and/or currency swaps are valued at their market value based on the price calculated by discounting future cash flows (principal and interest) at the prevailing market interest and/or exchange rates

European and foreign futures are valued using their settlement prices.

Interest rate and foreign currency swaps are valued under market conditions.

The valuation of interest-rate swaps against share performance is carried out:

- under market conditions for the fixed income branch
- according to the underlying security rate for the equity branch.

The valuation of credit default swaps (CDS) stems from a model populated by market spreads.

Off-balance sheet commitments in European and foreign futures markets are calculated as follows:

- FUTURES

(Qty x Nominal x Daily price x Contract currency)

- OPTIONS

(Qty x delta) x (Nominal of underlying instrument x Daily price of underlying instrument x Contract currency).

For swaps, the off-balance-sheet commitment corresponds to the nominal value of the contract plus or minus the interest differential and the unrealised capital gain or loss on the closing date.

Transaction fees are recognised in specific accounts of each subfund and are not added to the price.

Financial instruments whose prices were not determined on the day of valuation or whose prices have been adjusted are valued at their probable trading price under the responsibility of the Management Company. These valuations and the associated justification are provided to the statutory auditor for auditing purposes.

Valuation of financial guarantees

Collateral is valued daily at the market price (mark to market).

Haircuts can be applied to collateral received in the form of securities according to the level of risk.

Margin calls occur daily unless otherwise indicated in the master agreement covering these transactions on in case of agreement between the management company and the counterparty on the application of a trigger point.

Management fees

Management fees and running costs cover all costs relating to the Fund for financial, administrative, and accounting management, custodianship, distribution, auditing, etc.

These fees are charged to the income statement of the UCI.

Management fees do not include transaction fees. For more information on the costs actually billed to the UCI, please see the prospectus.

They are recognised on a pro rata basis each time the net asset value is calculated.

The aggregate of these fees complies with the maximum fee rate as a percentage of the net assets given in the fund's prospectus or rules:

FR0013476181 - HSBC RESPONSIBLE INVESTMENT FUNDS - EUROPE EQUITY GREEN TRANSITION ZC share: Maximum fee rate of 0.75% including tax

FR0012114239 - HSBC RESPONSIBLE INVESTMENT FUNDS - EUROPE EQUITY GREEN TRANSITION K C-D share: Maximum fee rate of 0.325% including tax

FR0000982456 - HSBC RESPONSIBLE INVESTMENT FUNDS - EUROPE EQUITY GREEN TRANSITION AD share: Maximum fee rate of 1.50% including tax

FR0013287224 - HSBC RESPONSIBLE INVESTMENT FUNDS - EUROPE EQUITY GREEN TRANSITION BC share: Maximum fee rate of 0.75% including tax

FR0011235340 - HSBC RESPONSIBLE INVESTMENT FUNDS - EUROPE EQUITY GREEN TRANSITION IC share: Maximum fee rate of 0.75% including tax

 ${\tt FR0000982449-HSBC\ RESPONSIBLE\ INVESTMENT\ FUNDS-EUROPE\ EQUITY\ GREEN\ TRANSITION\ AC\ share:\ Maximum\ fee\ rate\ of\ 1.50\%\ including\ tax}$

The maximum rate of operating and other service charges is 0.30% and the maximum rate of indirect charges is not significant.

Swing pricing

The management company has implemented a swing pricing mechanism to adjust the net asset value of each of the subfunds once a trigger threshold is reached in order to protect the interests of the unitholders present in each of the subfunds.

Under this mechanism, investors bear the portfolio adjustment costs — including transaction fees, bid/offer spreads and taxes or fees applicable to the UCI — relating to investments or disinvestments when there are significant numbers of subscriptions and redemptions.

When the net balance of investor subscription and redemption orders exceeds a predefined threshold, called the "trigger point", the NAV is adjusted.

The NAV is adjusted up or down if the balance of subscriptions/redemptions is respectively positive or negative, so as to take into account the readjustment costs attributable to the net subscription and/or redemption orders.

The trigger threshold is expressed as a percentage of the subfund's net assets.

The parameters for the trigger point and the NAV adjustment factor are determined by the Management Company and periodically reviewed.

The adjusted ("swung") NAV is the only NAV of the subfund concerned and is therefore the only NAV published and communicated to unitholders.

By applying swing pricing with a trigger threshold, it is possible that the UCI's volatility will not come from only the volatility of the financial instruments in the portfolio.

In accordance with the regulatory provisions, the management company does not communicate the trigger points and ensures that internal communication channels are restricted so as to safeguard the confidential nature of the information.

Appropriation of distributable amounts

Definition of distributable amounts

Distributable amounts consist of the following:

Income:

Net income for the financial year is equal to the amount of interest, arrears, premiums and bonuses, dividends, directors' fees and any other income relating to the securities that constitute the portfolio, plus income from temporary cash holdings, less management fees and borrowing costs.

Retained earnings are added to income and the balance of accrued income is added or subtracted as appropriate.

Gains and losses:

Realised gains, net of costs, minus realised losses, net of costs, recognised during the financial year, plus net gains of the same type recognised during prior financial years that were not the subject of any distribution or accumulation, and minus or plus the balance of the accrued gains account.

Appropriation of distributable amounts:

Share(s)	Appropriation of net income	Appropriation of net realised gains or losses
HSBC RESPONSIBLE INVESTMENT FUNDS - EUROPE EQUITY GREEN TRANSITION AC share	Accumulated	Accumulated
HSBC RESPONSIBLE INVESTMENT FUNDS - EUROPE EQUITY GREEN TRANSITION AD share	Distributed	Accumulation and/or Distribution on the management company's decision each year

Periodic disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Sustainable investment

means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance

practices.

The **EU**

2020/852, establishing a list

Taxonomy is a classification system laid down in Regulation (EU)

environmentally sustainable economic activities. This regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective are not necessarily aligned with the Taxonomy.

Product name: HSBC RESPONSIBLE INVESTMENT FUNDS - EUROPE EQUITY GREEN TRANSITION

Legal entity identifier: 969500QU9FT2NQ5RSU22

Sustainable investment objective

Does this financial product have a sustainable investment objective?						
●● ✓ Yes	No					
It made sustainable investments with an environmental objective: 98.94% in economic activities that qualify as environmentally sustainable under the EU Taxonomy	It promoted Environmental and/or Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of _% sustainable investments					
in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy					
	with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy					
	with a social objective					
It made sustainable investments with a social objective: _%	It promoted E/S characteristics but did not make any sustainable investments.					

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Sustainability indicators

The subfund invests in shares issued by European companies that provide the solutions necessary for the decarbonisation of players in the green transition. Portfolio companies are selected for their best environmental, social, and governance practices and for their financial quality. Therefore, the fund contributes to the environmental objectives set out in Article 9 of the Taxonomy Regulation and, in particular, to the objectives of climate change mitigation and adaptation.

measure how the environmental or social characteristics promoted by the financial product are attained.

In addition, the subfund will:

- Exclude issuers that have one or more confirmed breaches or at least two presumed breaches of one of the ten principles of the United Nations Global Compact or of the OECD Guidelines for Multinational Enterprises.
- Exclude shares of companies involved in the production of controversial weapons or their components. Controversial weapons include, but are not limited to, anti-personnel mines, depleted uranium weapons and white phosphorus when used for military purposes. This exclusion is in addition to the exclusion policy on weapons prohibited by international treaties.
- Exclude shares of companies in the Defence sector.
- Exclude shares of companies primarily involved in the exploration, production, and exploitation of fossil fuels.
- Exclude shares of companies engaged in thermal coal activities. With regard to electricity generation, companies that derive more than 5% of their revenue from electricity generated using thermal coal are partially excluded. Mining companies are completely excluded.
- Exclude shares of companies in the nuclear sector.
- Exclude shares of companies involved in tobacco production.
- Carefully consider environmental issues through voting and engagement activities.

The subfund is actively managed and does not track a benchmark. The indicator used by the subfund to measure performance is the MSCI Europe GDP weighted. However, it has not been designated to determine whether the subfund attains the sustainable investment objective.

How did the sustainability indicators perform?

Indicator	Fund	Benchmark
Emissions avoided	-226.90	-54.52
3. GHG emissions intensity of beneficiary companies - tonnes of CO2 equivalent per million euros of revenue	91.45	96.89
4. Exposure to companies active in the fossil fuel sector	0.00%	9.75%
10. Violations of the principles of the United Nations Global Compact and the OECD Guidelines for Multinational Enterprises	0.00%	0.00%
14. Exposure to companies involved in the production of controversial weapons or their components (anti-personnel mines, depleted uranium weapons, white phosphorus when used for military purposes)	0.00%	0.33%

The data in this report are as of 31 December 2024, based on the average of the positions at the end of each of the four quarters of the financial year ended 31 December 2024.

Benchmark - MSCI Europe GDP

To what extent have sustainable investments do no significant harm to a sustainable investment objective?

The principle of "do no significant harm" to environmental or social objectives applies only to the underlying sustainable investments of the subfund. This principle is incorporated into the investment decision-making process, which includes consideration of principal adverse impacts.

How have the indicators for adverse impacts on sustainability factors been taken into account?

HSBC Asset Management's "do no significant harm" (DNSH) assessment of issuers as part of its sustainable investment process includes consideration of principal adverse impacts (PAI). It involves a holistic analysis of the company's multiple sustainability impacts rather than focusing on a single factor. When an issuer is identified as potentially controversial, it cannot be considered a sustainable investment. All relevant PAIs are thus examined and integrated into the investment process according to an approach that combines exclusions (sectoral, the most severe ESG controversies, norms-based exclusions, etc.) with voting and shareholder engagement activities to instil and maintain a positive change dynamic within companies. Furthermore, a company will not qualify as sustainable if it does not comply with the principles of the United Nations Global Compact and its associated international standards, conventions, and treaties or if it is involved in weapons banned by international conventions. With the exception of these last two PAIs, we use proxies. In our view, the setting of exclusion thresholds (e.g. GHG emissions) for each PAI is not always relevant and could compromise the fact that many sectors and companies are in a transition strategy. In addition, engagement is essential to ensure that companies with limited disclosure, particularly in emerging economies, are initially excluded from the definition of sustainable investment and allow us to be a catalyst for positive environmental or social change. For example, we use a 10% threshold on revenues from thermal coal mining (and coal-fired power generation) as an exclusion filter to indirectly address all PAIs related to greenhouse gas emissions. HSBC's sustainable investment methodology is available on the management company's website: www.assetmanagement.hsbc.fr/fr/retail-investors/about-us/responsible-investors/policies

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights and anticorruption and antibribery matters.

Were the fund's sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

HSBC is committed to applying and promoting international standards. The ten principles of the United Nations Global Compact are among the priorities of HSBC's Responsible Investment Policy. These principles include non-financial risks such as human rights, labour standards, the environment, and anti-corruption. HSBC is also a signatory to the United Nations Principles for Responsible Investment. They provide a framework for the identification and management of sustainability risks. In this subfund, companies with a proven violation of one of the 10 principles of the United Nations Global Compact or at least two alleged violations are systematically excluded. Companies are also assessed according to international standards such as the OECD Guidelines for Multinational Enterprises.

How did this financial product take into consideration principal adverse impacts on sustainability factors?

The principal adverse impacts of investments are considered in the management of the subfund as follows:

- For the selection of investments, the manager has chosen two environmental indicators: "Greenhouse Gas Intensity" and "Exposure to companies active in the fossil fuel sector". The subfund's consideration of these indicators stems from, in particular, the application of our coal phase-out policy as well as sectoral exclusions set out by the label guidelines. In addition, the manager favours, all other things being equal, companies that emit the least CO2 within their sector or are working to reduce their carbon intensity.
- Exclusion of issuers:
- Considered non-compliant with the principles of the United Nations Global Compact and the OECD Guidelines for Multinational Enterprises.
- Exposed to controversial weapons.
- Lastly, the subfund takes into consideration the principal adverse impacts in its engagement approach, which incorporates several levers for action including 1) direct dialogue with companies about their consideration of environmental and social issues to ensure that they are able to face the future and maintain long-term financial viability, 2) the exercising of voting rights by which we express our support for positive development initiatives or, conversely, our disagreement when directors do not meet our expectations, and 3) a gradual escalation procedure with companies when the ESG risks or controversies to which they are exposed are not managed. In practice, the Greenhouse Gas Intensity indicator is taken into consideration, in particular, through dialogue with companies to assess how their carbon neutrality transition plans take into account impacts on employees, supply chains, communities and consumers.

The list comprises the investments making up the largest proportion of the financial product's investments at: Average of the positions at the end of each of the four quarters of the reference period ended 31/12/2024

What were this financial product's largest investments?

Largest investments	Sector	% of assets	Country
Compagnie de Saint-Gobain SA	Industry	4.66%	France
Schneider Electric SE	Industry	4.30%	France
Prysmian S.p.A.	Industry	4.29%	Italy

Norsk Hydro ASA	Materials	2.72%	Norway
BELIMO Holding AG	Industry	2.63%	Switzerland
Veolia Environnement SA	Utilities	2.62%	France

Cash and derivatives are excluded

What was the proportion of sustainability-related investments?

The proportion of sustainable investments was 98.94%.

The management company's sustainable investment methodology is available in the section "SFDR" Appendix of Regulation (EU) 2019/2088 of the annual report.

Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

^{*} A company or issuer that is considered a sustainable investment can contribute to both an environmental and a social objective that may or may not be aligned with the EU taxonomy. The figures in the chart above take this into account, but a company or issuer can only be counted once in category #1A Sustainable.

In which economic sectors were the investments made?

Sector / Sub-Sector

% assets

Industry	44.05%
Materials	14.08%
Utilities	13.16%
Electricity	1.49%
Diversified businesses	6.25%
Information technology	11.27%
Consumer discretionary	6.32%
Financial	6.25%
Telecommunications services	3.17%
Cash and derivatives	1.06%
Consumer staples	0.66%
Total	100.00%

To comply with the EU Taxonomy, the criteria applicable to natural gas include emission limits and switching to entirely renewable sources of electricity or to low-carbon fuel by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

EU Taxonomyaligned activities are expressed as a percentage of:

- revenue to reflect the share of revenue generated by green activities of investee companies;

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The proportion of sustainable investments aligned with the EU taxonomy is shown in the asset allocation table above.

Has the financial product invested in natural gas and/or nuclear energy generation activities that are compliant with the EU Taxonomy?

¹ Natural gas and/or nuclear energy generation activities only qualify as EU Taxonomy-eligible if they help mitigate climate change ("mitigation of climate change") and cause no significant harm to any of the EU Taxonomy objectives (see the explanatory note in the sidebar on the left). The set of criteria for natural gas and nuclear energy generation activities that are compliant with the EU Taxonomy are set out in Commission Delegated Regulation (EU) 2022/1214.

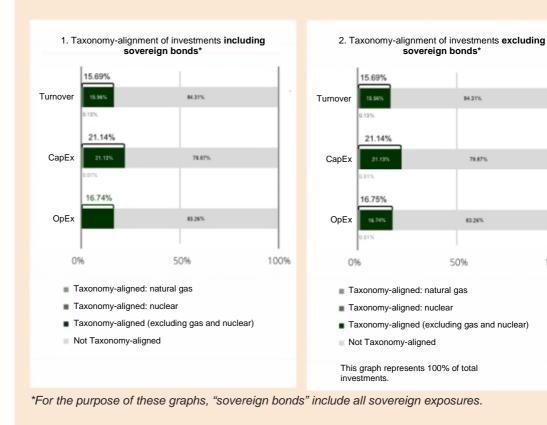

- capital expenditure (CapEx) to show the green investments made by investee companies, relevant for a transition to a green economy;

- operational expenses (OpEx) reflecting green operational activities of investee companies.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

The two graphs below show, in green, the percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

What was the share of investments made in transitional and enabling activities?

During the reporting period, the proportion of investments made in transitional activities was 1.66% and the proportion of investments made in enabling activities was 16.78%.

How did the percentage of EU Taxonomy-aligned investments compare with previous reference periods?

Indicator	2023-24	2022-23	2021-22
Revenue - Taxonomy aligned: fossil gas	N/A	N/A	0.00%
Turnover - Taxonomy-aligned: nuclear	0.13%	0.06%	0.00%
Revenue - Taxonomy aligned (excluding gas and nuclear)	15.56%	11.06%	0.00%
Revenue - Not Taxonomy-aligned	84.31%	88.89%	100.00%
CapEx - Taxonomy-aligned: natural gas	0.01%	N/A	0.00%
CapEx - Taxonomy-aligned: nuclear	N/A	N/A	0.00%
CapEx - Taxonomy-aligned (excluding gas and nuclear)	78.87%	85.16%	100.00%
CapEx - Not Taxonomy-aligned	21.13%	14.84%	0.00%
CapEx - Taxonomy-aligned: natural gas	N/A	N/A	0.00%
OpEx - Taxonomy-aligned: nuclear	N/A	N/A	0.00%
OpEx - Taxonomy-aligned (excluding gas and nuclear)	16.74%	11.68%	0.00%
OpEx - Not Taxonomy-aligned	83.26%	88.32%	100.00%

100%

do not take into account the criteria for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy was 47.25%.

What was the share of socially sustainable investments?

0.00%

What investments were included under "Non-sustainable", what was their purpose and were they covered by any minimum environmental or social safeguards?

The "non-sustainable" category is composed of cash.

What measures have been taken to achieve the sustainable investment objective during the reporting period?

The portfolio is composed in such a way that all the equities that make up the portfolio contribute to the sustainable objective of the strategy. The management measures have been taken in line with the sustainable investment objective.

How did this financial product perform compared to the sustainability benchmark?

The subfund is actively managed and does not track a benchmark. There is no benchmark representative of our management philosophy and therefore of our investment universe, nor has any index been designated to determine whether the subfund is aligned with the environmental or social characteristics that it promotes. The information requested in this section is therefore not applicable to this product.

How does the benchmark differ from a broad market index?

Not applicable

How did this financial product perform with regard to the sustainability indicators designed to determine the benchmark's alignment with the sustainable investment objective?

How did this financial product perform compared with the broad market index?

Not applicable

Reference benchmarks are indexes to measure whether the financial product attains the sustainable investment objective.

Subfund:

HSBC RESPONSIBLE INVESTMENT FUNDS SRI GLOBAL EQUITY

Activity report

Markets (total return performances in euros)

After reaching an all-time high in early December, the equity markets ended the year on a strong footing: the MSCI World Net Total Return in euros was up +26.6%.

In terms of geographical regions, the North American market outperformed (+32.3%) thanks to the excellent performance of the US market (+32.9%), with Canada gaining just +19.4%.

The Pacific region gained +14.2%, led by Singapore (+41.1%, although its contribution was low in the region), followed by Japan (+15.5%). Australia (+8.0%) and Hong Kong (+6.8%) underperformed.

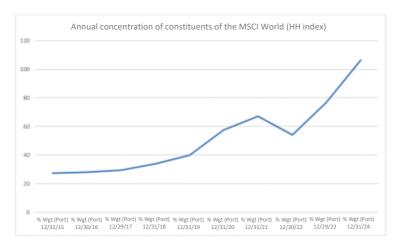

Lastly, Europe was behind the curve, with a rise of just 8.6% and significant disparities between countries: Germany +17.6%, the United Kingdom +14.7%, Switzerland +4.5% and France +1.0%. By sector, technology sectors outperformed (Communication Services +42.8%, Information Technology +41.7%). The Financials sector was also in on the action (+35.1%). The Consumer Discretionary sector also outperformed (+29.7%).

Some sectors underperformed significantly, particularly defensive Consumer Staples (+11.0%) and Healthcare (+9.6%), as well as Real Estate (+8.9%), Energy (+9.6%) and Materials (+0.8% only). Style performance was largely dependent on sector performance. Growth stocks outperformed (MSCI World Growth +34.3%), while value stocks underperformed significantly (MSCI World Value +18.9%).

Lastly, mid- and small-cap indices underperformed large caps: the MSCI World Small-Mid Index gained just +16.9% versus the Large Cap Index +28.1%.

Once again, the phenomenon of index concentration, particularly marked in the US, continued: the S&P 500 Equal Weight Total Return Index underperformed the Cap Weighted Index by -13.0%. As a result, the performance of the MSCI World was dependent on a limited number of players, particularly in the US technology segment (Apple, Nvidia, Amazon, Meta, Broadcom, Microsoft, Tesla and Alphabet in particular). These eight companies alone accounted for nearly 50% of the MSCI World's performance.

This concentration has risen sharply post-Covid with the Al boom:

Subfund performance

HSBC RIF SRI Global Equity underperformed the MSCI World in 2024: gross performance was +23.5% versus +26.6% for the MSCI World Net Total Return in euros (29/12/23-30/12/24), i.e. an underperformance of -3.1%.

December had a particularly strong impact on performance due to significant outperformance by several of the Magnificent 7, to which we had no exposure. Our SRI policy excluded Apple, Amazon, Alphabet and Meta, as well as Eli Lilly and JPMorgan.

In December alone, the fund underperformed by -2.0%.

Apple and Amazon outperformed by just over +5%, more for macro reasons (expected accommodative policy from the Fed, but ultimately less than expected after the meeting of 18/12), and systematic purchases (short sellers and funds managed with risk limits).

Alphabet outperformed by around +15% on the promising announcement of a new chip in the quantum domain. These shares are completely excluded by the current best-in-class approach, as they have poor ESG scores (sector best-in-class quartile 4). Part of the risk associated with these MAG7 stocks is partially offset by active bets on best-in-class stocks such as Nvidia, Trane Tech and LAM Research, as well as Microsoft and Tesla, which are not the best in ESG but whose impact we have neutralised.

Over the year as a whole, sector allocation had a negative impact (-1.0%).

The most significant negative sector contributions (GICS level 1) were in Communication Services (-0.6% for an average underexposure of -4%), Healthcare (-0.9%, overexposure of 5%) and Industrials (-0.4%, overexposure of 6%). These contributions were partially offset by favourable plays on Energy (+0.4%, underexposure of 2.5%), Information Technology (+0.4%, overexposure of 3%) and Materials (+0.3%, underexposure of 1.5%).

Stock-picking contributed -2.1%.

Our positioning on AI shares had a positive impact: Nvidia, average overexposure of 2.5%, contribution of +3.5%, and Trane Technologies, average overexposure of +2%, contribution of 0.6%. American Express, a recent addition to the portfolio, also made a positive contribution (+0.5%), as did SAP (+0.4%).

In terms of negative contributors, Broadcom had a negative impact, with the stock weighing -0.8% in relative performance with an average underexposure of just -1%. Broadcom published better-than-expected results. On 13/12 alone, it gained +25% following this announcement, driven by purchases on the AI theme. Broadcom was not particularly favoured in our approach, with an ESG score in line with the benchmark, so it was not in the portfolio and its weighting in the benchmark (1%) did not justify particular risk management, bearing in mind that the fund is already overexposed to semiconductors. Following the outperformance of Broadcom, we managed the associated tail risk. The fund was drifting towards an active position of -1.5%. We bought +50bp, taking advantage of a pullback in the share during the 18/12 session. The fund is now underexposed by -1% vs. -1.5% on 17/12, i.e. a more tolerable limit in the short term.

Neste, in the Energy sector, also had a significant impact (-0.7%). The fund was overexposed by an average of +0.5% to one of the few shares eligible in the sector under our SRI policy, the active share being a major player in biofuel with above-average ESG characteristics. This market compartment is not currently favoured by the market.

Lastly, the shares excluded by our SRI approach played a major role: Apple, Amazon, Alphabet, Meta, JPMorgan and Eli Lilly weighed on performance by nearly -300 bps over the full year.

From January 2025, the best-in-class approach of the HRIF SICAV is shifting towards an approach that improves its ESG rating, and should enable the fund to better manage its tail risk on shares with a significant weighting in the index and representing an excessive proportion of the tracking error: Apple currently accounts for 21% of the TE, Amazon 9% and Alphabet 8%. By converging these positions towards -1.5%/-2% in active weight, we could potentially halve their contributions to the TE.

Outlook

The direction of the markets will continue to be dictated by the macroeconomic environment and the disinflation cycle that structures monetary policies. The monetary easing cycle appears to be well under way in developed economies to stimulate growth. In Europe, recent economic data, coupled with political uncertainty, are increasing pressure on the European Central Bank to cut key rates more sharply.

In China, the situation is also beginning to develop favourably, with announcements of major measures to support activity through several channels. In Europe, there are growing calls among investors for a European investment plan or a German fiscal stimulus to improve Europe's competitiveness in a more uncertain world marked by the imminent return of US isolationism.

Despite the end of the US elections and a short-term decline in tensions in the Middle East, there are still many uncertainties. Political uncertainty has increased in Europe (new government in France, end of the coalition in Germany), and the global growth outlook also remains precarious. There is an increasingly pronounced divergence between US growth, which seems to be picking up, and the rest of the world.

The soft landing scenario remains the market's central scenario, and nothing seems to be hampering it as 2024 draws to a close. Nevertheless, the range of possibilities remains wide for 2025, with a still fragile global economic recovery and the dose of volatility that the new Trump administration could introduce on the international stage.

Lastly, the valuation of the US market is once again at all-time highs and many investors are starting to talk about the risk of a speculative bubble on this market.

Performance

At the close of the year, the subfund's performance was 21.71% for the AC share, 22.61% for the BC share, 22.65% for the IC share, 23.11% for the JC share and 23.57% for the ZC share. The IC (USD) share created on 31 July 2024 is inactive.

For the sake of comparison, the performance of the benchmark "for information" was 26.65%.

Past performance is not an indicator of the future results of the SICAV subfund.

Information on environmental, social, and governance (ESG) criteria

In accordance with Article L.533-22-1 of the French Monetary and Financial Code, the policy on considering environmental, social, and governance quality (ESG) criteria in the investment strategy is available on the management company's website at www.assetmanagement.hsbc.fr.

Further information on the inclusion of ESG criteria in the investment policy over the fiscal year

The transparency code for the subfund is available to the public online at www.assetmanagement.hsbc.fr and provides detailed information on the subfund's SRI approach.

"SFDR" Annex to Regulation (EU) 2019/2088 and its implementing technical standards

The subfund promotes environmental or social characteristics within under Article 8 of Regulation (EU) 2019/2088 of 27 November 2019 on sustainability-related disclosures in the financial services sector ("SFDR").

Information on environmental or social characteristics is available in the SFDR appendix of the annual report.

The management company's sustainable investment methodology is as follows:

Sustainable investment within the meaning of Article 2(17) of the European SFDR

The SFDR (EU Regulation 2019/2088 of the European Parliament and of the Council of 27 November 2019) on sustainability-related disclosures in the financial services sector comes into force in 2021, with the obligation for financial institutions to be transparent in their communication on sustainable investment strategies that incorporate environmental, social and governance (ESG) issues.

Under this regulation, as provided for in Article 2, point |17| of the SFDR, sustainable investment is defined as an investment that generates positive environmental and/or social outcomes. The challenge for asset managers has been to define and calculate the net positive contribution of companies to environmental and social issues, while ensuring that this positive contribution is not accompanied by negative impacts.

How is the sustainable contribution of issuers measured?

- We have developed a proprietary methodology to determine whether an instrument/issuer can be defined as a "sustainable investment" within the meaning of SFDR Article 2(17) and whether it can be taken into account in the calculation of the proportion of sustainable assets in portfolios.
- Since 2022, our methodology has evolved from seeking to align revenue with the United Nations Sustainable Development Goals (SDGs) to a broader approach that also incorporates the sustainable quality of issuers' business models, operations and sustainability strategies. This broadening of the scope of analysis better reflects the commitment and actions taken by companies to meet the challenges of sustainable development.
- Our assessment also includes a verification of the principle of Do No Significant Harm (DNSH) while taking good governance practices into account. This review takes into account the principle adverse impacts (PAI) in accordance with the SFDR. PAIs are a selection of environmental and social indicators to consider and report on, including greenhouse gas (GHG) emissions, carbon intensity and footprint, discharges and gender pay gaps.

Source: HSB Asset Management

Overview of the general investment process, which may differ depending on the product, the customer's mandate, or market conditions

Assessing the sustainable quality of an investment

Our methodology is based on the assessment of an investment's ability to contribute to the United Nations Sustainable Development Goals (SDGs) and has three dimensions¹:

An in-depth analysis is carried out on the basis of several external data sources, as well as internal analyses and research. These data sources include Sustainalytics, S&P Trucost and FTSE Green Revenue, as well as our proprietary databases on companies' green shares and their eligibility for the European taxonomy².

Based on sustainability thresholds defined for each of the analysed criteria (see details on page 3), issuers/instruments will be considered sustainable if they meet at least one of the three dimensions mentioned above.

Overview of the general investment process, which may differ depending on the product, the customer's mandate, or market conditions

128

2

⁽¹⁾ These three dimensions and their respective thresholds or indicators may be subject to change over time, without notice, depending on, for example, regulatory changes or clarifications, data availability, technological progress, etc. The parameters are as of the date indicated.

(2) The European taxonomy refers to the classification of economic activities with a positive impact on the environment. Its objective is to direct investments

towards sustainable - i.e. "green" - activities. https://finance.ec.europa.eu/sustainable-finance/tools-and-standards/eu-taxonomy-sustainable-activities en

The three dimensions of sustainability¹

3

To what extent does an investment contribute to one or more of the 17 SDGs?

Sustainable products and services

Current or expected sustainable net revenue in 3-5 years >=30%

Measure of the percentage of sustainable net revenue aligned with one or more of the 17 SDGs = measure of current or future revenue aligned with at least one of the SDGs (CAPEX², OPEX³ or EBITDA⁴), minus non-sustainable products and services, tobacco, thermal coal, prohibited weapons, the most severe environmental, social and governance (ESG) controversies, etc.

Quantitative score

Sustainable alignment of the strategy

Business models

Sustainable assessment of the business model: >=50% of the assessment questionnaire responses must obtain the highest score.

Assessing the sustainable quality of a company's business model integrates its operations and value chain, its sustainable development strategy and the management of the impacts of its activities on its environment and on communities. The positive contribution is identified based on alignment with the SDGs⁵.

Proven & verified (SMART⁵)

Sustainable theme

Thematic revenue of the company >=20%

or Assessment of the sustainable theme >=30%

These thresholds are tailored to emerging sustainable themes in industries that are still growing and/or fragmented, such as the circular economy.

Ambitions and practices

Progress made by the company in implementing its growth strategy verified on the basis of relevant indicators established by competent market bodies, for example credible carbon emission reduction targets approved by the Science Based Targets initiative (SBTi⁶).

Energy transition pathway

Assessment of activities that contribute to the energy transition based on the identification of the green share of the company's products and services (as a percentage of revenue) that makes it possible to finance the energy transition and the transition to renewable energies.

A company is considered a "sustainable transition asset" based on the intensity of its green share and criteria aligned with the Towards Sustainability label for the traditional energy (Oil & Gas) and power generation sectors.

Green, social and sustainability bonds

Use of bond issue proceeds in a sustainable business

For fixed income instruments, we view green, social and sustainability bonds as sustainable investments due to their clear and direct contribution to environmental and social goals. Green, social and sustainable bond instruments, as defined by the International Capital Market Association ("ICMA")⁸ and structures in accordance with its principles or guidelines, contribute, by their very design, to achieving environmental and/or social objectives aligned with the SDGs.

¹ These three dimensions and their respective thresholds or indicators may be subject to change over time, depending on, for example, regulatory changes or clarifications, data availability, technological progress, etc.

² Capital expenditure or CÁPEX, representing the capital invested for a company to acquire or modernise fixed, physical or non-consumable assets. Investment expenditures are primarily one-time investments in non-consumable assets used to maintain the existing operating levels within a company and to promote its future growth. Investment expenses server to buy or invest in tangible assets, such as real estate assets, raw materials, factories, buildings and equipment, which benefit the company beyond a single fiscal year. Intangible and non-physical assets, such as patents and licences, may also be considered as capital expenditure.

Operating expenses, or OPEX, include green costs, overheads and administrative costs, which are costs incurred as part of the main activities of the company, or overheads.
 EBITDA (earnings before interest, taxes, depreciation and amortisation) is another measure of a company's profitability other than net profit. By eliminating

* EBITDA (earnings before interest, taxes, depreciation and amortisation) is another measure of a company's profitability other than net profit. By eliminating non-cash depreciation charges, as well as taxes and debt costs dependent on the capital structure, EBITDA attempts to represent the cash profit generated by the company's activities.

⁵ Specific, measurable, achievable, realistic and time-bound

⁶ Science-based targets provide companies with a clear path to reduce their greenhouse gas emissions, thereby helping to prevent the worst effects of climate change and preparing businesses for future growth. The targets are considered "science-based" if they are aligned with what the latest climate science deems necessary to meet the goals of the Paris Agreement, namely limiting global warming to 1.5°C above pre-industrial levels.

129

Do no significant harm principle

4

Our methodology verifies the absence of significant harm (DNSH) while taking good governance practices into account.

Our sustainable investments meet the requirements of the DNSH principle as defined by the SFDR (article 2(17) to the extent that they apply our exclusion policy detailed below:

DNSH principle – exclusions

For corporate bonds:

- Controversial and banned weapons score ²
- Revenue from tobacco production > 0%³
- Revenue from coal mining > 10%³
- Revenue from energy production via thermal coal > 10%³
- Non-compliance with the United Nations Global Compact ^{3,4}
- Reporting of the most serious controversies³

For government bonds:

- Reporting a breach with regard to a social issue³
- Any country on the HSBC sanctions list

The DNSH principle is examined in the same way as the good governance of the companies held in the portfolio, which forms the basis of our fundamental analysis and investment process.

Assessment of governance practices

- Our reflection process goes beyond governance scores and ESG scores. The quality of governance is assessed
 on the basis of criteria specified in the investment process, including ethics, corporate culture and values,
 governance structure and corruption.
- We determine the materiality of governance through an analysis of the governance structure, controversies, compliance with the principles of the UN Global Compact and the OECD guidelines for multinational companies.
- At a minimum, we exclude the most severe controversies for our actively managed funds.

Overview of the general investment process, which may differ depending on the product, the customer's mandate, or market conditions

⁽¹⁾ At end-December 2022.

⁽²⁾ The data comes in particular from ISS-Ethix

⁽²⁾ The data comes in particular from Sustainalytics. Examples of controversies: activities related to child labour, major environmental damage, corruption, pollution, etc.

⁽³⁾ The United Nations Global Compact is a voluntary initiative based on the commitment of companies to implement universal principles of sustainable development and build partnerships to support the United Nations goal: https://unglobalcompact.org/.

Spotlight on the Sustainable Development Goals

5

The 2030 Sustainable Development Agenda, adopted by all member states of the United Nations, establishes a common plan for peace and prosperity for people and the planet, now and in the future.

At the heart of this agenda are the 17 SDGs, which call for action by all countries – both developed and developing – under a global partnership.

These goals were designed with the understanding that eradicating poverty and other deprivation must go hand in hand with strategies to improve health and education, reduce inequalities and stimulate economic growth, tackle climate change and work to preserve our oceans and forests.

For more information, please visit https://sdgs.un.org/goals.

Additional information relating to Shareholder Rights Directive II (SRD2)

Contribution to medium- and long-term performance

During the period under review, the investment strategy was implemented in a disciplined manner and yielded results in line with expectations, giving us confidence that we will achieve the performance and risk management objectives over the recommended investment period for this Subfund.

The investment strategy aims to identify companies that contribute to green growth and the decarbonisation of society. Within this investment sub-universe, we will invest in those with the highest ESG ratings in their sector and profitability and growth prospects that are not reflected in their valuations.

The integration of non-financial factors (environmental, social, and governance) into the analysis of investment cases allows us to better assess the soundness and sustainability of the business model(s) of the examined company and therefore to integrate into its valuation any elements of risk or opportunities that the mere analysis of its financial statements might not have identified.

• Main significant risks

The subfund incurs primary and secondary risks, which are listed in the subfund's prospectus.

Turnover rate

Portfolio turnover rate: 24.75%

The SEC method is used to calculate the turnover rate: Annual TO = Min (Purchase of securities; Sale of securities) / Average AUM

Management of conflicts of interest

During the past fiscal year, there were no conflicts of interest related to engagement activities.

During this period, the management company decided to use a voting advisor, Institutional Shareholder Services (ISS), for engagement activities.

Securities lending

The management company did not engage in securities lending during the past fiscal year.

Information about investment decisions

Investment decisions are based on fundamental analysis of the companies included in the investment universe. Markets are not always efficient and do not always reflect the intrinsic value of companies.

In this context, investment decisions are based on long-term fundamental analysis, thus enabling us to take advantage of these opportunities arising from the excessive volatility of financial

The management processes are based on exploiting the data from the fundamental analysis conducted by our independent research teams, whether in the short, medium, or long term.

Furthermore, regardless of the asset class, the consideration of Environmental, Social, and Governance risks and opportunities (E.S.G. integration) is an integral part of the security selection process of the manager of the subfunds concerned with the objective of long-term outperformance.

Incidents affecting the subfund during the fiscal year and forthcoming

> 4 June 2024

Update of regulatory documentation with the following changes:

- ✓ Update of recurring costs and performance scenarios in the Key Information Documents (KID)
- ✓ Standardisation of the drafting of KIDs (covered by Article 8 of the SFDR and AMF category 1 "central communication") following the recommendations issued by the French Financial Markets Authority (AMF) as part of its SPOT control relating to compliance with asset management companies' contractual non-financial commitments.
- ✓ Information on the HSBC Group's responsible investment policies (coal policy and energy policy) has been specified in the prospectus and the SFDR appendix.

> 12 July 2024

> 31 July 2024

Update of the prospectus with the following changes:

- ✓ Creation of the IC (USD) share (ISIN code: FR001400RAJ)
- ✓ Deletion of the IT share (ISIN code FR0013325867)

> 2 August 2024

Registration in Germany of the BC share (FR0013287265).

1 January 2025

Update of regulatory documentation resulting from changes made to the SRI label framework and other changes.

Following the entry into force on 1 March 2024 of the new SRI label framework applicable to French UCIs, the management of the subfunds that retain the label will change to adapt to the additional requirements of the SRI label set out below:

- 1- strengthen the requirements for selecting securities assets in the labelled subfund:
 - a) the market capitalisation weighted average ESG rating must be higher than the average ESG rating of the benchmark used for information purposes. In practice, the ESG rating that the subfund must outperform is calculated by removing the 30% worst stocks, based on exclusion criteria and the ESG rating. The "Best in class" approach has been abandoned in favour of the rating improvement approach.
 - b) the weighing assigned to each ESG pillar in the overall ESG rating is equal to at least 20% and varies according to the specific characteristics of the company's business sector.
 - c) a strict exclusion framework exists for each of the three ESG pillars, with the implementation of minimum exclusion criteria.
 - d) requirements in terms of monitoring controversies, shareholder engagement and voting policies have been strengthened.
- 2- a) ensure that application of the dual materiality requirement within the meaning of the European SFDR regulation is made systematic in management of the labelled subfund.
- 2- b) ensure consistency between the extra-financial performance of the labelled subfund, its ESG objectives and the associated performance monitoring indicators: the labelled subfund will undertake to outperform its benchmark indicator used for information purposes on two indicators most closely related to its ESG objective: the greenhouse gas (GHG) intensity indicator and the absence of human rights policy indicator.
- 3- incorporate a climate policy into the management of the labelled subfund: in order to limit its impact on the climate, the labelled subfund will no longer be able to invest in companies whose new projects are the exploration, exploitation and refining of fossil fuels, whether conventional or non-conventional.

In addition, in accordance with the changes to the French Financial Markets Authority (AMF) introduced by the regulations dated 6 October 2022, "operating and other service charges" may be deducted based on actual costs (the existing method) or based on a predefined flat rate, in both cases up to the maximum rate provided for in the prospectus.

With effect from 1 January 2025, HSBC Global Asset Management (France) has decided to deduct operating and other service charges based on a predefined flat rate.

The flat rate mentioned in the SICAV's prospectus will therefore be deducted even if the actual costs are lower than this rate. Conversely, if the actual costs are higher than the stated rate, the amount in excess of that flat rate will be borne by the management company.

Lastly, the wording of the following paragraphs of the prospectus will be updated:

- ✓ Restrictions on the issuance and redemption of units for US Persons
- ✓ Restrictions on the issuance and redemption of units for Canada residents
- ✓ Provisional measures prohibiting subscriptions to the fund from 12 April 2022.

Information relating to efficient portfolio management techniques and derivatives used by the subfund of the SICAV, pursuant to AMF position No. 2013-06

Efficient portfolio management techniques

As of the close of the fiscal year, the subfund of the SICAV did not use efficient portfolio management techniques.

Derivatives

As of the close of the fiscal year, the subfund of the SICAV did not use derivatives.

Policy on claims for the return of foreign withholding taxes

In the Santander ruling of 10 May 2012 (C-338/11 – Santander Asset Management SGIIC), the Court of Justice of the European Union held that "EU law precludes the French legislation which taxes at source nationally sourced dividends when received by UCITS resident in another State but exempts such dividends from tax when received by UCITS resident in France".

This ruling can be transposed in various EU countries where the taxation of dividends paid to resident investment funds and non-resident investment funds appears to be discriminatory with regard to the free movement of capital guaranteed by EU law.

In this context, as management company of the SICAV, HSBC Global Asset Management (France) followed all the steps described in the handbook of the French association of management companies (AFG) ("Refund of withholding taxes on foreign securities of French UCITSs" - version of 21 December 2012) to identify opportunities and then initiate requests for refund of withholding taxes levied in contradiction with EU law.

HSBC Global Asset Management (France) thus acts in the interests of the shareholders by making claims on behalf of the HRIF - SRI Global Equity subfund where the materiality threshold, the likelihood of recovery, and the costs would be favourable to the unitholders. This claim policy is subject to uncertainties in terms of timeframes and reimbursed amounts.

The amount of reimbursements actually received in respect of these claims is: None.

The situation has not changed since the previous close.

Notes

A. General information

A1. Characteristics and activity of the open-ended UCI

A1a. Investment strategy and profile

The investment objective of the subfund is to be exposed to international equity markets by picking corporate stocks selected for their good environmental, social, and governance practices and their financial quality.

With that in mind, the fund manager aims to seek the best performance through discretionary management on international equity markets over a recommended investment period of at least five years.

The UCI's prospectus fully describes and specifies these characteristics

A1b. Characteristics of the UCI over the last 5 financial years

A2. Accounting policies

The annual financial statements are presented for the first time in the form prescribed by ANC regulation 2020-07, as amended by ANC regulation 2022-03.

1 Changes in accounting methods, including presentation, in connection with the application of the new accounting regulation relating to the annual financial statements of undertakings for collective investment with variable capital (ANC regulation 2020-07 as amended)

This new regulation imposes changes in accounting methods, including changes in the presentation of annual financial statements. Comparability with the financial statements for the previous financial year cannot therefore be achieved.

NB: the statements concerned are (in addition to the balance sheet and the income statement): B1. Change in equity and financing liabilities; D5a. Allocation of distributable amounts relating to net income and D5b. Allocation of distributable amounts relating to net realised gains and losses.

Thus, in accordance with the second paragraph of Article 3 of ANC Regulation 2020-07, the financial statements do not present data from the previous financial year; the previous year's financial statements are included in the notes to the financial statements.

These changes mainly concern:

- the balance sheet structure, which is now presented by types of eligible assets and liabilities, including loans and borrowings;
- the structure of the income statement, which is extensively modified; the income statement includes in particular: exchange rate differences on financial accounts, unrealised gains and losses, realised gains and losses, and transaction fees;
- the removal of the off-balance sheet table (part of the information on the items in this table is now included in the notes);
- the removal of the option to recognise costs included in the cost price (without retroactive effect for funds previously applying the included costs method):
- the distinction between convertible bonds and other bonds, as well as their respective accounting records;
- a new classification of target funds held in the portfolio according to the model: UCITS / AIF / Other;
- the recognition of forward foreign exchange commitments, which is no longer done on the balance sheet but off-balance sheet, with information on forward foreign exchange contracts covering a specific portion:
- the addition of information relating to direct and indirect exposures to the various markets;
- the presentation of the inventory, which now distinguishes eligible assets and liabilities from forward financial instruments;
- the adoption of a single presentation model for all types of UCI;
- the removal of account aggregation for funds with subfunds.

2 Accounting rules and methods applied during the financial year

General accounting principles apply (subject to the changes described above):

- true and fair view, comparability, going concern;
- accuracy, reliability;
- prudence;
- consistency of accounting methods from one period to the next.

The accrued interest method is used to recognise revenue from fixed income securities.

Purchases and sales of securities are booked excluding expenses.

The euro is the reference currency for the portfolio's accounting.

The duration of the reporting period is 12 months.

Asset valuation rules

The asset valuation rules applied by the accounting manager are outlined below according to the instruments held by the subfund:

The subfund has adopted the euro as the reference currency.

The prices used for the valuation of securities traded on the stock exchange are the closing prices.

The prices applied for the valuation of bonds are an average contributor. Funds are valued at their last known price.

Negotiable debt securities with a residual life of more than three months are valued at the market rate, with the exception of variable-rate or adjustable-rate negotiable debt securities not presenting any particular market sensitivity.

A simplified method known as "linearisation" is applied for negotiable debt instruments whose residual lifespan is less than three months with no particular sensitivity to the market on the basis of the crystallised three-month rate.

Repurchase agreements are valued at the contract price.

Firm and optional forward transactions and swap transactions made on OTC markets and authorised under the applicable fund regulations are measured at their market value or at an estimated value using methods chosen by the management company. Interest rate and/or currency swaps are valued at their market value based on the price calculated by discounting future cash flows (principal and interest) at the prevailing market interest and/or exchange rates.

European and foreign futures are valued using their settlement prices.

Interest rate and foreign currency swaps are valued under market conditions.

The valuation of interest-rate swaps against share performance is carried out:

- under market conditions for the fixed income branch
- according to the underlying security rate for the equity branch.

The valuation of Credit Default Swaps (CDS) stems from a model used by the spreads market.

Off-balance-sheet commitments in the European and foreign futures markets are calculated as follows:

- FUTURES

(Qty x Nominal x Daily price x Contract currency)

OPTIONS

(Qty x delta) x (Nominal of underlying instrument x Daily price of underlying instrument x Contract currency).

For swaps, the off-balance-sheet commitment corresponds to the nominal value of the contract plus or minus the interest differential and the unrealised capital gain or loss on the closing date.

Transaction fees are recognised in specific accounts of each subfund and are not added to the price.

Financial instruments whose prices were not determined on the day of valuation or whose prices have been adjusted are valued at their probable trading price under the responsibility of the Management Company. These valuations and the associated justification are provided to the statutory auditor for auditing purposes.

Valuation of financial guarantees

Collateral is valued daily at the market price (mark to market).

Haircuts can be applied to collateral received in the form of securities according to the level of risk.

Margin calls occur daily unless otherwise indicated in the master agreement covering these transactions on in case of agreement between the Management Company and the counterparty on the application of a trigger threshold.

Financial management

Financial management fees and administrative fees external to the management company cover all fees charged directly to the subfund, with the exception of transaction fees. Transaction fees include intermediation fees (brokerage, stock exchange taxes, etc.) and activity fees, where applicable, which may be collected in particular by the depositary and the management company.

The following fees may be payable in addition to financial management fees and costs of administrative services external to the management company:

- performance fees. These commissions are paid to the management company when the subfund has exceeded its targets. They are therefore charged to the subfund;
- activity fees charged to the subfund;
- a share of the income from temporary purchases and sales of securities.

In the event of an increase in administrative fees external to the management company equal to or less than 0.10% including tax per year, the subfund's shareholders may be informed by any means.

In that case, the management company will not be required to notify the shareholders in any particular way or offer the option to redeem their shares free of charge.

			Scale rate				
	Charges to the subfund	Base	AC shares	IC, BC and IC shares (USD)	JC shares	ZC shares	
1	Financial management fees(*)	Daily net assets	Maximum 1.50% incl. tax	Maximum 0.75% incl. tax	Maximum 0.375% incl. tax	None	
2	Operating and other service charges (**)	Daily net assets	Maximum 0.10% incl. tax				
3	Maximum indirect charges (charges and management fees)	Daily net assets	Immaterial(***)				
4	Activity fees	Deducted from each transaction	None				
5	Performance commission	Daily net assets	None				

^{*} A percentage of management fees may be passed on to third-party marketing agents in return for marketing the subfund

I. Fund registration and listing fees:

- fees related to the subfund's registration in other Member States (including fees charged by advisors (lawyers, consultants, etc.) for carrying out marketing formalities with the local regulator on the asset management company's behalf);
- fees for listing the subfund and publication of net asset values for investor information purposes;
- fees for distribution platforms (excluding retrocessions); Agents in foreign countries interfacing with distribution

II. Costs for keeping clients and distributors informed

- the costs of drafting and distributing KIDs, prospectuses and regulatory reports;
- the costs of providing regulatory information to distributors;
- the costs of providing information to unitholders by all means:
- information specific to direct and indirect holders; 4: Letters to holders;
- website administration costs;
- translation costs specific to the subfund.

^{**}Operating and other service charges include:

III. Data costs

- costs of data used for redistribution to third parties;
- costs for auditing and promoting labels (e.g. SRI label, Greenfin label)
- IV. Depositary, legal, audit, tax fees, etc.
- statutory audit fees;
- depositary fees:
- fees for delegation of administrative and accounting management;
- tax-related fees including those of lawyers and external consultants (recovery of withholding tax on behalf of the fund, local tax agent, etc.);
- legal fees specific to the subfund;
- Costs of creating a new subfund, amortisable over 5 years.
- V. Costs relating to compliance with regulatory obligations and regulatory reporting
- fees for submitting regulatory reports to the regulator specific to the subfund;
- fees for compulsory professional associations
- operating charges for deployment of voting policies at General Meetings

The following costs may be added to the above-listed fees charged to the subfund:

- contributions due for the management of the subfund pursuant to 4° of Article L. 621-5-3-II-4° of the French Monetary and Financial Code;
- exceptional and non-recurring taxes, levies and government duties (in relation to the subfund);
- exceptional and non-recurring costs for the recovery of receivables (e.g. Lehman) or proceedings to assert a right (e.g. class action).

Swing pricing

The management company has implemented a swing pricing mechanism to adjust the net asset value of each of the subfunds once a trigger threshold is reached in order to protect the interests of the unitholders present in each of the subfunds.

Under this mechanism, investors bear the portfolio adjustment costs — including transaction fees, bid/offer spreads and taxes or fees applicable to the UCI — relating to investments or disinvestments when there are significant numbers of subscriptions and redemptions.

When the net balance of investor subscription and redemption orders exceeds a predefined threshold, called the "trigger point", the NAV is adjusted.

The NAV is adjusted up or down if the balance of subscriptions/redemptions is respectively positive or negative, so as to take into account the readjustment costs attributable to the net subscription and/or redemption orders.

The trigger threshold is expressed as a percentage of the subfund's net assets.

^{***}The subfund invests less than 20% in UCIs

The parameters for the trigger point and the NAV adjustment factor are determined by the Management Company and periodically reviewed.

The adjusted ("swung") NAV is the subfund's only NAV and is therefore the only NAV published and communicated to unitholders.

By applying swing pricing with a trigger threshold, it is possible that the UCI's volatility will not come from only the volatility of the financial instruments in the portfolio.

In accordance with the regulatory provisions, the management company does not communicate the trigger points and ensures that internal communication channels are restricted so as to safeguard the confidential nature of the information.

Appropriation of distributable amounts

Definition of distributable amounts

Distributable amounts consist of the following:

Income:

Net revenue plus retained earnings and plus or minus the balance of the accrued income account.

Gains and losses:

Capital gains realised, net of costs, minus realised losses, net of costs, recognised during the fiscal year, plus net gains of the same type recognised in previous fiscal years that were not distributed or accumulated, plus or minus the balance of accrued gains.

The amounts referred to as "income" and "gains and losses" may be distributed, in whole or in part, independently of each other.

Distributable sums are paid within a maximum period of five months following the end of the financial year.

Where the UCI is authorised under Regulation (EU) No. 2017/1131 of the European Parliament and of the Council of 14 June 2017 on money market funds, by way of derogation from the provisions of I, distributable sums may also include unrealised gains.

Appropriation of distributable amounts:

Share(s)	Allocation of net income	Appropriation of net realised gains or losses

NOTES TO THE ANNUAL FINANCIAL STATEMENTS

1. Accounting policies

The annual financial statements are presented in the form prescribed by ANC regulation no. 2014-01, as amended.

General accounting principles are applied:

- true and fair view, comparability, going concern;
- accuracy, reliability;
- prudence;
- consistency of accounting methods from one period to the next.

The accrued interest method is used to recognise revenue from fixed income securities.

Purchases and sales of securities are booked excluding expenses.

The euro is the reference currency for the portfolio's accounting.

The duration of the reporting period is 12 months.

Asset valuation rules

The asset valuation rules applied by the accounting manager are outlined below according to the instruments held by the subfund:

The subfund has adopted the euro as the reference currency.

The prices used for the valuation of securities traded on the stock exchange are the closing prices.

The prices applied for the valuation of bonds are an average contributor. Funds are valued at their last known price.

Negotiable debt securities with a residual life of more than three months are valued at the market rate, with the exception of variable-rate or adjustable-rate negotiable debt securities not presenting any particular market sensitivity.

A simplified method known as "linearisation" is applied for negotiable debt instruments whose residual lifespan is less than three months with no particular sensitivity to the market on the basis of the crystallised three-month rate.

Repurchase agreements are valued at the contract price.

Firm and optional forward transactions and swap transactions made on OTC markets and authorised under the applicable fund regulations are measured at their market value or at an estimated value using methods chosen by the management company. Interest rate and/or currency swaps are valued at their market value based on the price calculated by discounting future cash flows (principal and interest) at the prevailing market interest and/or exchange rates.

European and foreign futures are valued using their settlement prices.

Interest rate and foreign currency swaps are valued under market conditions.

The valuation of interest-rate swaps against share performance is carried out:

- under market conditions for the fixed income branch
- according to the underlying security rate for the equity branch.

The valuation of Credit Default Swaps (CDS) stems from a model used by the spreads market.

Off-balance sheet commitments in European and foreign futures markets are calculated as follows:

- FUTURES

(Qty x Nominal x Daily price x Contract currency)

- OPTIONS

(Qty x delta) x (Nominal of underlying instrument x Daily price of underlying instrument x Contract currency).

For swaps, the off-balance-sheet commitment corresponds to the nominal value of the contract plus or minus the interest differential and the unrealised capital gain or loss on the closing date.

Transaction fees are recognised in specific accounts of each subfund and are not added to the price.

Financial instruments whose prices were not determined on the day of valuation or whose prices have been adjusted are valued at their probable trading price under the responsibility of the Management Company. These valuations and the associated justification are provided to the statutory auditor for auditing purposes.

Valuation of financial guarantees

Collateral is valued daily at the market price (mark to market).

Haircuts can be applied to collateral received in the form of securities according to the level of risk.

Margin calls occur daily unless otherwise indicated in the master agreement covering these transactions on in case of agreement between the Management Company and the counterparty on the application of a trigger threshold.

Financial management

Management fees and running costs cover all costs relating to the Fund for financial, administrative, and accounting management, custodianship, distribution, auditing, etc.

These fees are charged to the Fund's income statement.

Management fees do not include transaction fees. For more information on the costs actually billed to the fund, please see the prospectus.

They are recognised on a pro rata basis each time the net asset value is calculated.

The aggregate of these fees complies with the maximum fee rate as a percentage of the net assets given in the fund's prospectus or rules:

FR0013356722 - HSBC RESPONSIBLE INVESTMENT FUNDS - SRI GLOBAL EQUITY JC share: Maximum fee rate of 0.375% including tax.

FR0013287265 - HSBC RESPONSIBLE INVESTMENT FUNDS - SRI GLOBAL EQUITY BC share: Maximum fee rate of 0.75% including tax.

FR0013076007 - HSBC RESPONSIBLE INVESTMENT FUNDS - SRI GLOBAL EQUITY ZC share: Maximum fee rate of 0.00% including tax.

FR0010761072 - HSBC RESPONSIBLE INVESTMENT FUNDS - SRI GLOBAL EQUITY IC share: Maximum fee rate of 0.75% including tax.

FR0000438905 - HSBC RESPONSIBLE INVESTMENT FUNDS - SRI GLOBAL EQUITY AC share; Maximum fee rate of 1.50% including tax.

Operating and other service charges are a maximum of 0.10% including tax for the AC, IC, BC, JC and ZC shares.

The maximum indirect management fee rate is: Not significant.

Swing pricing

The management company has implemented a swing pricing mechanism to adjust the net asset value of each of the subfunds once a trigger threshold is reached in order to protect the interests of the unitholders present in each of the subfunds.

Under this mechanism, investors bear the portfolio adjustment costs — including transaction fees, bid/offer spreads and taxes or fees applicable to the UCI — relating to investments or disinvestments when there are significant numbers of subscriptions and redemptions.

When the net balance of investor subscription and redemption orders exceeds a predefined threshold, called the "trigger point", the NAV is adjusted.

The NAV is adjusted up or down if the balance of subscriptions/redemptions is respectively positive or negative, so as to take into account the readjustment costs attributable to the net subscription and/or redemption orders.

The trigger threshold is expressed as a percentage of the subfund's net assets.

The parameters for the trigger point and the NAV adjustment factor are determined by the Management Company and periodically reviewed.

The adjusted ("swung") NAV is the only NAV of the subfund concerned and is therefore the only NAV published and communicated to unitholders.

By applying swing pricing with a trigger threshold, it is possible that the UCI's volatility will not come from only the volatility of the financial instruments in the portfolio.

In accordance with the regulatory provisions, the management company does not communicate the trigger points and ensures that internal communication channels are restricted so as to safeguard the confidential nature of the information.

Appropriation of distributable amounts

Definition of distributable amounts

Distributable amounts consist of the following:

Income:

Net income for the financial year is equal to the amount of interest, arrears, premiums and bonuses, dividends, directors' fees and any other income relating to the securities that constitute the portfolio, plus income from temporary cash holdings, less management fees and borrowing costs.

Retained earnings are added to income and the balance of accrued income is added or subtracted as appropriate.

Gains and losses:

Realised gains, net of costs, minus realised losses, net of costs, recognised during the financial year, plus net gains of the same type recognised during prior financial years that were not the subject of any distribution or accumulation, and minus or plus the balance of the accrued gains account.

Appropriation of distributable amounts:

Share(s)	Appropriation of net income	Appropriation of net realised gains or losses

Template for periodic disclosures for financial products covered by Article 8, paragraphs 1, 2 and 2a of Regulation (EU)) 2019/2088 and by Article 6(1) of Regulation (EU) 2020/852

Sustainable investment means

Product name: HSBC RESPONSIBLE INVESTMENT FUNDS - SRI GLOBAL EQUITY

an investment in

an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm either of these objectives and that the financial product's

investee

practices.

The EU
Taxonomy is a
classification
system laid down
in Regulation (EU)

2020/852, establishing a list

economic activities. Sustainable investments with an environmental objective are not necessarily aligned

with the Taxonomy.

environmentally sustainable economic activities. This regulation does not include a list of socially sustainable

companies follow good governance

Legal entity identifier 969500K13Y61OMS4TT49

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?				
Yes	● ✓ No			
It made sustainable investments with an environmental objective: _% in economic activities that qualify as environmentally sustainable under the EU Taxonomy	It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a minimum proportion of 49.02% sustainable investments			
in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	with an environmental objective and made in economic activities that qualify as environmentally sustainable under the EU Taxonomy			
	with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy			
	with a social objective			
It made sustainable investments with a social objective: _%	It promoted E/S characteristics but did not make any sustainable investments.			

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product

are attained.

The subfund promotes E, S, and G characteristics by investing in international equity markets by selecting corporate securities chosen for their financial qualities and their good environmental, social, and governance practices according to a best-in-class approach. This approach consists of selecting the best companies in each sector based on environmental, social, and governance criteria. For each ESG pillar, several criteria are used, including CO2 emissions for the E pillar, the remuneration and training policy for the S pillar, and the management and shareholder representation structure for the G pillar.

In addition, the subfund will:

- Exclude issuers in violation of one or more of the 10 principles of the United Nations Global Compact (or at least two alleged violations) and the OECD Guidelines for Multinational Enterprises.
- Exclude shares of companies involved in the production of controversial weapons or their components. Controversial weapons include, but are not limited to, anti-personnel mines, depleted uranium weapons and white phosphorus when used for military purposes. This exclusion is in addition to the exclusion policy on weapons prohibited by international treaties.
- Exclude shares of companies in the defence sector.
- Exclude shares of companies engaged in thermal coal activities. Companies that derive more than 10% of their revenue from electricity generated using thermal coal are partially excluded. Mining companies are completely excluded.
- Exclude shares of companies involved in the production of tobacco.
- Carefully consider environmental issues through voting and engagement activities. The subfund is actively managed and does not track a benchmark. The indicator used by the subfund to measure performance is the MSCI World. However, it has not been designated to determine whether the subfund is aligned with the environmental or social characteristics it promotes.

How did the sustainability indicators perform?

Indicator	Fund	Benchmark
ESG Score	6.69	5.76
E Pillar	7.53	6.67
S Pillar	6.26	5.17
G Pillar	6.50	5.73
3. GHG emissions intensity of beneficiary companies - tonnes of CO2 equivalent per million euros of revenue	24.51	101.87
10. Violations of the principles of the United Nations Global Compact and the OECD Guidelines for Multinational Enterprises	0.00%	0.39%
14. Exposure to companies involved in the production of controversial weapons or their components (anti-personnel mines, depleted uranium weapons, white phosphorus when used for military purposes)	0.00%	0.23%

The data in this report are as of 31 December 2024, based on the average of the positions at the end of each of the four quarters of the financial year ended 31 December 2024.

What were the objectives of the specific sustainable investments that the financial product intended to make and how did its sustainable investments help meet such objectives?

The subfund's sustainable investments are aligned with its environmental characteristics.

The identification and ESG analysis of companies are performed as part of the investment decision-making process to reduce sustainability risks and increase returns.

How did the specific sustainable investments that the financial product made not cause significant harm to any environmental or social sustainable investment objective?

The principle of "do no significant harm" to environmental or social objectives applies only to the underlying sustainable investments of the subfund. This principle is incorporated into the investment decision-making process, which includes consideration of principal adverse impacts.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Principal adverse impacts

Are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social, and employee matters, respect for human rights, anti-corruption, and anti-bribery matters.

HSBC Asset Management's "do no significant harm" (DNSH) assessment of issuers as part of its sustainable investment process includes consideration of principal adverse impacts (PAI). It involves a holistic analysis of the company's multiple sustainability impacts rather than focusing on a single factor. When an issuer is identified as potentially controversial, it cannot be considered a sustainable investment. All relevant PAIs are thus examined and integrated into the investment process according to an approach that combines exclusions (sectoral, the most severe ESG controversies, norms-based exclusions, etc.) with voting and shareholder engagement activities to instil and maintain a positive change dynamic within companies. Furthermore, a company will not qualify as sustainable if it does not comply with the principles of the United Nations Global Compact and its associated international standards, conventions, and treaties or if it is involved in weapons banned by international conventions. With the exception of these last two PAIs, we use proxies. In our view, the setting of exclusion thresholds (e.g. GHG emissions) for each PAI is not always relevant and could compromise the fact that many sectors and companies are in a transition strategy. In addition, engagement is essential to ensure that companies with limited disclosure, particularly in emerging economies, are initially excluded from the definition of sustainable investment and allow us to be a catalyst for positive environmental or social change. For example, we use a 10% threshold on revenues from thermal coal mining (and coal-fired power generation) as an exclusion filter to indirectly address all PAIs related to greenhouse gas emissions. HSBC's sustainable investment methodology is available on the management company's website: www.assetmanagement.hsbc.fr/fr/retail-investors/aboutus/responsible-investors/policies

Were the fund's sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

HSBC is committed to applying and promoting international standards. The ten principles of the United Nations Global Compact are among the priorities of HSBC's Responsible Investment Policy. These principles include non-financial risks such as human rights, labour standards, the environment, and anticorruption. HSBC is also a signatory to the United Nations Principles for Responsible Investment. They provide a framework for the identification and management of sustainability risks. In this subfund, companies that have been found to have violated any of the 10 principles of the United Nations Global Compact or have at least two alleged violations. Companies are also assessed according to international standards such as the OECD Guidelines for Multinational Enterprises.

The EU Taxonomy sets out a "do no significant harm" principle by which Taxonomyaligned investments should not significantly harm EU Taxonomy objectives, and is accompanied by criteria specific to the EU.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the European Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the European Union criteria for environmentally sustainable economic activities.

Any other sustainable investments must also do no significant harm to any environmental or social objectives.

How did this financial product take into consideration principal adverse impacts on sustainability factors?

The principal adverse impacts of investments are considered in the management of the subfund as follows:

- For the selection of investments, the manager has chosen an environmental indicator: "Greenhouse Gas Intensity". The subfund's consideration of this indicator stems from, in particular, the application of our coal phase-out policy. In addition, the manager favours companies with low CO2 emissions or companies working to reduce their carbon intensity.
- Exclusion of issuers:
- Considered non-compliant with the principles of the United Nations Global Compact and the OECD Guidelines for Multinational Enterprises;
- Exposed to controversial weapons.

Lastly, the subfund takes into consideration the principal adverse impacts in its engagement approach, which incorporates several levers for action including 1) direct dialogue with companies about their consideration of environmental and social issues to ensure that they are able to face the future and maintain long-term financial viability, 2) the exercising of voting rights by which we express our support for positive development initiatives or, conversely, our disagreement when directors do not meet our expectations, and 3) a gradual escalation procedure with companies when the ESG risks or controversies to which they are exposed are not managed. In practice, the Greenhouse Gas Intensity indicator is taken into consideration, in particular, through dialogue with companies to assess how their carbon neutrality transition plans take into account impacts on employees, supply chains, communities, and consumers.

The list comprises the investments making up the largest proportion of the financial product's investments at: Average of the positions at the end of each of the four quarters of the reference period ended 31/12/2024

What were this financial product's largest investments?

Largest investments	Sector	% of assets	Country
NVIDIA Corporation	Information Technology	6.76%	The United States

Cash and derivatives are excluded

The asset allocation

describes the proportion of investments in specific assets.

What was the proportion of sustainability-related investments?

The proportion of sustainable investments was 49.02%.

The management company's sustainable investment methodology is available in the section "SFDR" Appendix of Regulation (EU) 2019/2088 of the annual report.

What was the asset allocation?

The category **#1 Aligned** with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

The category **#2 Other** includes the remaining investments of the financial product that are neither aligned with the environmental or social characteristics nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

- the sub-category #1A Sustainable covering environmentally and socially sustainable investments;
- the sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments
- * A company or issuer that is considered a sustainable investment can contribute to both an environmental and a social objective that may or may not be aligned with the EU taxonomy. The figures in the chart above take this into account, but a company or issuer can only be counted once in category #1A Sustainable.

In which economic sectors were the investments made?

To comply with the EU Taxonomy, the criteria applicable to natural gas include emission limits and switching to entirely renewable sources of electricity or to low-carbon fuel by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The proportion of sustainable investments aligned with the EU taxonomy is shown in the asset allocation table above.

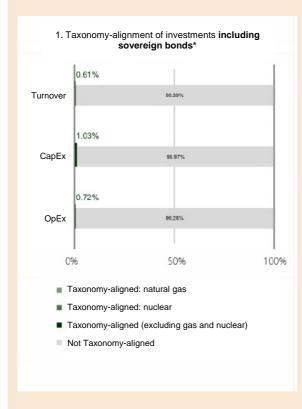

Has the financial product invested in natural gas and/or nuclear energy
generation activities that are compliant with the EU Taxonomy? 1
_

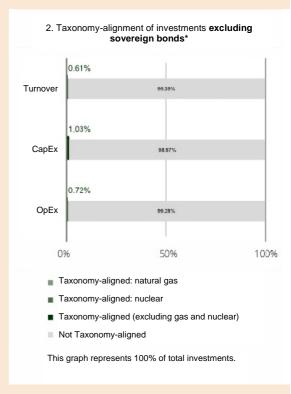

Yes:	
In natural gas	In nuclear energy
No	

EU Taxonomyaligned activities are expressed as a percentage of:

- revenue to reflect the current ecological nature of investee companies;
- capital
 expenditure
 (CapEx) to show
 the green
 investments made
 by investee
 companies,
 relevant for a
 transition to a
 green economy;
- operational expenses (OpEx) reflecting green operational activities of investee companies.

The two graphs below show, in green, the percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

^{*} For the purpose of these graphs, "sovereign bonds" include all sovereign exposures.

¹ Natural gas and/or nuclear energy generation activities only qualify as EU Taxonomy-eligible if they help mitigate climate change ("mitigation of climate change") and cause no significant harm to any of the EU Taxonomy objectives (see the explanatory note in the sidebar on the left). The set of criteria for natural gas and nuclear energy generation activities that are compliant with the EU Taxonomy are set out in Commission Delegated Regulation (EU) 2022/1214.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Enabling
activities directly
enable other
activities to make a
substantial
contribution to an
environmental
objective.

What was the share of investments made in transitional and enabling activities?

During the reporting period, the proportion of investments made in transitional activities was 0.00% and the proportion of investments made in enabling activities was 0.18%.

How did the percentage of EU Taxonomy-aligned investments compare with previous reference periods?

Indicator	2023-24	2022-23	2021-22
Revenue - Taxonomy aligned: fossil gas	N/A	N/A	0.00%
Turnover - Taxonomy-aligned: nuclear	N/A	N/A	0.00%
Revenue - Taxonomy aligned (excluding gas and nuclear)	0.61%	0.61%	0.00%
Revenue - Not Taxonomy-aligned	99.39%	99.39%	100.00%
CapEx - Taxonomy-aligned: natural gas	N/A	N/A	0.00%
CapEx - Taxonomy-aligned: nuclear	N/A	N/A	0.00%
CapEx - Not Taxonomy-aligned	1.03%	1.39%	0.00%
CapEx - Taxonomy-aligned (excluding gas and nuclear)	98.97%	98.61%	100.00%
CapEx - Taxonomy-aligned: natural gas	N/A	N/A	0.00%
OpEx - Taxonomy-aligned: nuclear	N/A	N/A	0.00%
OpEx - Taxonomy-aligned (excluding gas and nuclear)	0.72%	0.62%	0.00%
OpEx - Not Taxonomy-aligned	99.28%	99.38%	100.00%

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

Sustainable investments with an environmental objective not aligned with the EU taxonomy accounted for 48.18%. The fund has not committed to investments aligned with the EU taxonomy.

What was the share of socially sustainable investments?

The subfund does not commit to having a minimum share of socially sustainable investments. However, when assessing issuers, the subfund manager does look at their employment characteristics, respect for human rights and employee rights, management conduct, and corporate social responsibility.

What investments were included under "Other", what was their purpose and were they covered by any minimum environmental or social safeguards?

The subfund holds cash as well as investments for which no non-financial analysis could be performed due to the unavailability of ESG data.

What actions have been taken to attain the environmental and/or social characteristics during the reference period?

The fund promotes ESG characteristics by investing primarily in companies chosen for their best-in-class environmental, social and governance practices and their financial qualities.

This approach consists of selecting the best companies within each sector according to ESG criteria.

During 2024, we constantly adjusted the portfolio to meet our commitments. For example, we sold Toronto Dominion Bank, which was no longer compatible with our objectives.

How did this financial product perform compared with its benchmark?

The subfund is actively managed and does not track a benchmark. There is no benchmark representative of our management philosophy and therefore of our investment universe, nor has any index been designated to determine whether the subfund is aligned with the environmental or social characteristics that it promotes. The information requested in this section is therefore not applicable to this product.

Benchmarks are indexes used to gauge whether the financial product attains the environmental or social characteristics that it promotes.

- How does the benchmark differ from a broad market index?
 Not applicable
- How did this financial product perform with regard to the sustainability indicators designed to determine the benchmark's alignment with the environmental or social characteristics promoted?
 Not applicable

SICAV HSBC RESPONSIBLE INVESTMENT FUNDS - SRI GLOBAL EQUITY

Energy and Climate Act (LEC) report - Article 29

As the subfund has assets in excess of €500 million, the Article 29 report under the French Energy and Climate Act No. 2019-1147 of 8 November 2019 (LEC) is available on the management company's website www.assetmanagement.hsbc.fr. This document is published within 6 months of the subfund's accounting close.

Annual report as at 30/12/2024 214

Subfund:

HSBC RESPONSIBLE INVESTMENT FUNDS - SRI EUROLAND EQUITY

SICAV HSBC RESPONSIBLE INVESTMENT FUNDS -**SRI EUROLAND EQUITY**

Activity report

Equity markets posted positive returns in 2024, driven by hopes of a soft landing for the global economy. The moderate slowdown in economic growth in a context of disinflation allowed central banks to lower their interest rates. In addition, corporate earnings remained positive overall and the artificial intelligence (AI) theme continued to support some technology shares.

Against this backdrop, the software and technology equipment sector made strong progress, as did financial shares (banks and insurance). Capital goods and specialised retail also posted a significant increase. Consumer-related sectors were down (consumer staples, food/beverages, luxury goods) but some cyclical sectors such as automotive, basic products, semiconductors and transport are holding up. Energy posted one of the steepest declines.

French stocks posted performances close to zero, penalised by the political situation, and small caps continued to lag behind large caps this year.

Allocation of performance

Since the start of the year, the fund's performance has been close to that of the MSCI EMU index.

- The underperformance of ESG factors in the first quarter reversed in the second and third quarter. notably due to a decline in defence and oil, renewed interest in renewables and the outperformance of companies with good ESG ratings in the banking, capital goods and business services sectors.
- Sector allocation was positive, driven by overweight positions in banking, insurance and real estate and underweight positions in consumer durables, energy, semiconductors and consumer staples. Negative contributions came from an overweight position in transportation and utilities and an underweight position in pharmaceuticals and capital goods.
- Stock selection was negative due to our picks in semiconductors (STM vs ASML), consumer durables (Kering Q1 ESG), energy (Neste Q2 ESG), food & beverage (Heineken, Pernod Ricard), transportation (DHL) and capital goods (Bouygues, Kion, Metso). However, we benefited from positive contributions from Bawag and Erste in banking, Munich Re in insurance, Relx in business services, Inditex in speciality retail, CRH and DSM in commodities, Publicis in media and SAP in software.

Performance

At the close of the year, the subfund's performance was 7.82% for the AC share, 8.69% for the BC share, 8.68% for the IC share, 8.85% for the SC share and 9.50% for the ZC share.

For the sake of comparison, the performance of the benchmark "for information" was -9.49%.

Past performance is not an indicator of the future results of the SICAV subfund.

PEA

Pursuant to the provisions of Article 91 *quater* L of the French General Tax Code, Annex 2, at least 75% of the subfund is invested at all times in securities and interests referred to in Article L.221-31-I-1 a, b and c of the French Monetary and Financial Code. 221-31 of the French Monetary and Financial Code.

Proportion of actual investment during the year: 92.60%.

Information on environmental, social, and governance (ESG) criteria

In accordance with Article L.533-22-1 of the French Monetary and Financial Code, the policy on including environmental, social, and governance quality (ESG) criteria in the investment strategy is available on the management company's website at www.assetmanagement.hsbc.fr...

Further information on the inclusion of ESG criteria in the investment policy over the fiscal year

The transparency code for the HSBC Responsible Investment Funds - SRI Dynamic subfund is available to the public online at www.assetmanagement.hsbc.fr and provides detailed information on the subfund's SRI approach.

"SFDR" Annex to Regulation (EU) 2019/2088 and its implementing technical standards

The subfund promotes environmental or social characteristics within under Article 8 of Regulation (EU) 2019/2088 of 27 November 2019 on sustainability-related disclosures in the financial services sector ("SFDR").

Information on environmental or social characteristics is available in the SFDR appendix of the annual report.

The management company's sustainable investment methodology is as follows:

Sustainable investment within the meaning of Article 2(17) of the European SFDR

The SFDR (EU Regulation 2019/2088 of the European Parliament and of the Council of 27 November 2019) on sustainability-related disclosures in the financial services sector comes into force in 2021, with the obligation for financial institutions to be transparent in their communication on sustainable investment strategies that incorporate environmental, social and governance (ESG) issues.

Under this regulation, as provided for in Article 2, point |17| of the SFDR, sustainable investment is defined as an investment that generates positive environmental and/or social outcomes. The challenge for asset managers has been to define and calculate the net positive contribution of companies to environmental and social issues, while ensuring that this positive contribution is not accompanied by negative impacts.

How is the sustainable contribution of issuers measured?

- We have developed a proprietary methodology to determine whether an instrument/issuer can be defined as a "sustainable investment" within the meaning of SFDR Article 2(17) and whether it can be taken into account in the calculation of the proportion of sustainable assets in portfolios.
- Since 2022, our methodology has evolved from seeking to align revenue with the United Nations Sustainable Development Goals (SDGs) to a broader approach that also incorporates the sustainable quality of issuers' business models, operations and sustainability strategies. This broadening of the scope of analysis better reflects the commitment and actions taken by companies to meet the challenges of sustainable development.
- Our assessment also includes a verification of the principle of Do No Significant Harm (DNSH) while taking good governance practices into account. This review takes into account the principle adverse impacts (PAI) in accordance with the SFDR. PAIs are a selection of environmental and social indicators to consider and report on, including greenhouse gas (GHG) emissions, carbon intensity and footprint, discharges and gender pay gaps.

Overview of the general investment process, which may differ depending on the product, the customer's mandate, or market conditions

Assessing the sustainable quality of an investment

2

Our methodology is based on the assessment of an investment's ability to contribute to the United Nations Sustainable Development Goals (SDGs) and has three dimensions¹:

An in-depth analysis is carried out on the basis of several external data sources, as well as internal analyses and research. These data sources include Sustainalytics, S&P Trucost and FTSE Green Revenue, as well as our proprietary databases on companies' green shares and their eligibility for the European taxonomy².

Based on sustainability thresholds defined for each of the analysed criteria (see details on page 3, issuers/instruments will be considered sustainable if they meet at least one of the three dimensions mentioned above.

Source: HSB Asset Management

Overview of the general investment process, which may differ depending on the product, the customer's mandate, or market conditions

⁽¹⁾ These three dimensions and their respective thresholds or indicators may be subject to change over time, without notice, depending on, for example, regulatory changes or clarifications, data availability, technological progress, etc. The parameters are as of the date indicated.

⁽²⁾ The European taxonomy refers to the classification of economic activities with a positive impact on the environment. Its objective is to direct investments towards sustainable – i.e. "green" – activities. https://finance.ec.europa.eu/sustainable-finance/tools-and-standards/eu-taxonomy-sustainable-activities en

The three dimensions of sustainability¹

3

To what extent does an investment contribute to one or more of the 17 SDGs?

Sustainable products and services

Current or expected sustainable net revenue in 3-5 years >=30%

Measure of the percentage of sustainable net revenue aligned with one or more of the 17 SDGs = measure of current or future revenue aligned with at least one of the SDGs (CAPEX², OPEX³ or EBITDA⁴), minus non-sustainable products and services, tobacco, thermal coal, prohibited weapons, the most severe environmental, social and governance (ESG) controversies, etc.

Quantitative score

Sustainable alignment of the strategy

Business models

Sustainable assessment of the business model: >=50% of the assessment questionnaire responses must obtain the highest score.

Assessing the sustainable quality of a company's business model integrates its operations and value chain, its sustainable development strategy and the management of the impacts of its activities on its environment and on communities. The positive contribution is identified based on alignment with the SDGs⁵.

Proven & verified (SMART⁵)

Sustainable theme

Thematic revenue of the company >=20%

or Assessment of the sustainable theme >=30%

These thresholds are tailored to emerging sustainable themes in industries that are still growing and/or fragmented, such as the circular economy.

Ambitions and practices

Progress made by the company in implementing its growth strategy verified on the basis of relevant indicators established by competent market bodies, for example credible carbon emission reduction targets approved by the Science Based Targets initiative (SBTi⁶).

Energy transition pathway

Assessment of activities that contribute to the energy transition based on the identification of the green share of the company's products and services (as a percentage of revenue) that makes it possible to finance the energy transition and the transition to renewable energies.

A company is considered a "sustainable transition asset" based on the intensity of its green share and criteria aligned with the Towards Sustainability label⁷ for the traditional energy (Oil & Gas) and power generation sectors.

Green, social and sustainability bonds

Use of bond issue proceeds in a sustainable business

For fixed income instruments, we view green, social and sustainability bonds as sustainable investments due to their clear and direct contribution to environmental and social goals. Green, social and sustainable bond instruments, as defined by the International Capital Market Association ("ICMA")⁸ and structures in accordance with its principles or guidelines, contribute, by their very design, to achieving environmental and/or social objectives aligned with the SDGs.

¹ These three dimensions and their respective thresholds or indicators may be subject to change over time, depending on, for example, regulatory changes or clarifications, data availability, technological progress, etc.

² Capital expenditure or CÁPEX, representing the capital invested for a company to acquire or modernise fixed, physical or non-consumable assets. Investment expenditures are primarily one-time investments in non-consumable assets used to maintain the existing operating levels within a company and to promote its future growth. Investment expenses server to buy or invest in tangible assets, such as real estate assets, raw materials, factories, buildings and equipment, which benefit the company beyond a single fiscal year. Intangible and non-physical assets, such as patents and licences, may also be considered as capital expenditure.

Operating expenses, or OPEX, include green costs, overheads and administrative costs, which are costs incurred as part of the main activities of the company, or overheads.
 EBITDA (earnings before interest, taxes, depreciation and amortisation) is another measure of a company's profitability other than net profit. By eliminating

"EBITDA (earnings before interest, taxes, depreciation and amortisation) is another measure of a company's profitability other than net profit. By eliminating non-cash depreciation charges, as well as taxes and debt costs dependent on the capital structure, EBITDA attempts to represent the cash profit generated by the company's activities.

⁵ Specific, measurable, achievable, realistic and time-bound

⁶ Science-based targets provide companies with a clear path to reduce their greenhouse gas emissions, thereby helping to prevent the worst effects of climate change and preparing businesses for future growth. The targets are considered "science-based" if they are aligned with what the latest climate science deems necessary to meet the goals of the Paris Agreement, namely limiting global warming to 1.5°C above pre-industrial levels.

* www.icmagroup.org/assets/documents/Sustainable-finance/2022-updates/Mapping-SDGs-to-GSS-Bonds_June-2022-28062022.pdf

Source: HSB Asset Management

Overview of the general investment process, which may differ depending on the product, the customer's mandate, or market conditions

Do no significant harm principle

Our methodology verifies the absence of significant harm (DNSH) while taking good governance practices into account.

Our sustainable investments meet the requirements of the DNSH principle as defined by the SFDR (article 2(17) to the extent that they apply our exclusion policy detailed below:

DNSH principle – exclusions

For corporate bonds:

- Controversial and banned weapons score 2
- Revenue from tobacco production > 0%3
- Revenue from coal mining > 10%3
- Revenue from energy production via thermal coal > 10%3
- Non-compliance with the United Nations Global Compact 3,4
- Reporting of the most serious controversies³

For government bonds:

- Reporting a breach with regard to a social issue³
- Any country on the HSBC sanctions list

The DNSH principle is examined in the same way as the good governance of the companies held in the portfolio, which forms the basis of our fundamental analysis and investment process.

Assessment of governance practices

- Our reflection process goes beyond governance scores and ESG scores. The quality of governance is assessed on the basis of criteria specified in the investment process, including ethics, corporate culture and values, governance structure and corruption.
- We determine the materiality of governance through an analysis of the governance structure, controversies, compliance with the principles of the UN Global Compact and the OECD guidelines for multinational companies.
- At a minimum, we exclude the most severe controversies for our actively managed funds.

The data comes in particular from Sustainalytics. Examples of controversies: activities related to child labour, major environmental damage, corruption,

pollution, etc.
The United Nations Global Compact is a voluntary initiative based on the commitment of companies to implement universal principles of sustainable development and build partnerships to support the United Nations goal: https://unglobalcompact.org/

Spotlight on the Sustainable Development Goals

5

The 2030 Sustainable Development Agenda, adopted by all member states of the United Nations, establishes a common plan for peace and prosperity for people and the planet, now and in the future.

At the heart of this agenda are the 17 SDGs, which call for action by all countries – both developed and developing – under a global partnership.

These goals were designed with the understanding that eradicating poverty and other deprivation must go hand in hand with strategies to improve health and education, reduce inequalities and stimulate economic growth, tackle climate change and work to preserve our oceans and forests.

For more information, please visit https://sdgs.un.org/goals.

Additional information relating to Shareholder Rights Directive II (SRD2)

Contribution to medium- and long-term performance

During the period under review, the investment strategy was implemented in a disciplined manner and yielded results in line with expectations, giving us confidence that we will achieve the performance and risk management objectives over the recommended investment period for this Subfund.

The investment strategy is based on selecting companies with the best ESG ratings within their sector and with profitability and growth prospects that are not reflected in their valuations.

The integration of non-financial factors (environmental, social, and governance) into the analysis of investment cases allows us to better assess the soundness and sustainability of the business model(s) of the examined company and therefore to integrate into its valuation any elements of risk or opportunities that the mere analysis of its financial statements might not have identified.

Main significant risks

The subfund incurs primary and secondary risks, which are listed in the subfund's prospectus.

Turnover rate

Portfolio turnover rate: 26.77%

The SEC method is used to calculate the turnover rate: Annual TO = Min (Purchase of securities: Sale of securities) / Average AUM

Management of conflicts of interest

During the past fiscal year, there were no conflicts of interest related to engagement activities.

During this period, the management company decided to use a voting advisor, Institutional Shareholder Services (ISS), for engagement activities.

Securities lending

The management company did not engage in securities lending during the past fiscal year.

Information about investment decisions

Investment decisions are based on fundamental analysis of the companies included in the investment universe. Markets are not always efficient and do not always reflect the intrinsic value of companies.

In this context, investment decisions are based on long-term fundamental analysis, thus enabling us to take advantage of these opportunities arising from the excessive volatility of financial markets.

The management processes are based on the use of data from the fundamental analysis conducted by our independent research teams, whether in the short, medium or long term. Furthermore, and regardless of the asset class, the consideration of Environmental, Social and Governance risks and opportunities (ESG integration) is an integral part of the security selection process of the manager of the subfund in question with the objective of long-term outperformance.

Incidents affecting the subfund during the fiscal year and forthcoming

> 4 June 2024

Update of regulatory documentation with the following changes:

- Update of recurring costs and performance scenarios in the Key Information Documents (KID)
- Standardisation of the drafting of KIDs (covered by Article 8 of the SFDR and AMF category 1 "central communication") following the recommendations issued by the French Financial Markets Authority (AMF) as part of its SPOT control relating to compliance with asset management companies' contractual non-financial commitments.
- Information on the HSBC Group's responsible investment policies (coal policy and energy policy) has been specified in the prospectus and the SFDR appendix.

> 31 July 2024

Update of the prospectus with the following change:

✓ Removal of the IT share (ISIN code FR0013234960).

> 1 January 2025

Update of regulatory documentation resulting from changes made to label repositories and other changes.

Following the entry into force on 1 March 2024 of the new SRI label framework applicable to French UCIs, the management of the subfunds that retain the label will change to adapt to the additional requirements of the SRI label set out below:

- 1- strengthen the requirements for selecting securities assets in the labelled subfund:
 - a) the market capitalisation weighted average ESG rating must be higher than the average ESG rating of the benchmark used for information purposes. In practice, the ESG rating that the subfund must outperform is calculated by removing the 30% worst stocks, based on exclusion criteria and the ESG rating. The "Best in class" approach has been abandoned in favour of the rating improvement approach.
 - b) the weighing assigned to each ESG pillar in the overall ESG rating is equal to at least 20% and varies according to the specific characteristics of the company's business sector.

- c) a strict exclusion framework exists for each of the three ESG pillars, with the implementation of minimum exclusion criteria.
- d) requirements in terms of monitoring controversies, shareholder engagement and voting policies have been strengthened.
- 2- a) ensure that application of the dual materiality requirement within the meaning of the European SFDR regulation is made systematic in management of the labelled subfund.
- 2- b) ensure consistency between the extra-financial performance of the labelled subfund, its ESG objectives and the associated performance monitoring indicators: the labelled subfund will undertake to outperform its benchmark indicator used for information purposes on two indicators most closely related to its ESG objective: the greenhouse gas (GHG) intensity indicator and the absence of human rights policy indicator.
- 3- incorporate a climate policy into the management of the labelled subfund: in order to limit its impact on the climate, the labelled subfund will no longer be able to invest in companies whose new projects are the exploration, exploitation and refining of fossil fuels, whether conventional or non-conventional.

Furthermore, additional requirements for the subfund resulting from application of the "Toward Sustainability" label benchmark (leading to additional commitments in the consideration of the Greenhouse Gas Intensity indicator and the diversity indicator within the governance bodies, a commitment to outperform the ESG rating in relation to the benchmark indicator used for information purposes, as well as the application of exclusions).

In addition, in accordance with the changes to the French Financial Markets Authority (AMF) introduced by the regulations dated 6 October 2022, "operating and other service charges" may be deducted based on actual costs (the existing method) or based on a predefined flat rate, in both cases up to the maximum rate provided for in the prospectus.

With effect from 1 January 2025, HSBC Global Asset Management (France) has decided to deduct operating and other service charges based on a predefined flat rate.

The flat rate mentioned in the SICAV's prospectus will therefore be deducted even if the actual costs are lower than this rate. Conversely, if the actual costs are higher than the stated rate, the amount in excess of that flat rate will be borne by the management company.

Lastly, the wording of the following paragraphs of the prospectus will be updated:

- ✓ Restrictions on the issuance and redemption of units for US Persons
- ✓ Restrictions on the issuance and redemption of units for Canada residents
- ✓ Provisional measures prohibiting subscriptions to the fund from 12 April 2022.

Information relating to efficient portfolio management techniques and derivatives used by the subfund of the SICAV, pursuant to AMF position No. 2013-06

Efficient portfolio management techniques

As of the close of the fiscal year, the subfund of the SICAV did not use efficient portfolio management techniques.

Derivatives

As of the close of the fiscal year, the subfund of the SICAV did not use derivatives.

Policy on claims for the return of foreign withholding taxes

In the Santander ruling of 10 May 2012 (C-338/11 – Santander Asset Management SGIIC), the Court of Justice of the European Union held that "EU law precludes the French legislation which taxes at source nationally sourced dividends when received by UCITS resident in another State but exempts such dividends from tax when received by UCITS resident in France".

This ruling can be transposed in various EU countries where the taxation of dividends paid to resident investment funds and non-resident investment funds appears to be discriminatory with regard to the free movement of capital guaranteed by EU law.

In this context, as management company of the SICAV, HSBC Global Asset Management (France) followed all the steps described in the handbook of the French association of management companies (AFG) ("Refund of withholding taxes on foreign securities of French UCITSs" - version of 21 December 2012) to identify opportunities and then initiate requests for refund of withholding taxes levied in contradiction with EU law.

HSBC Global Asset Management (France) thus acts in the interests of the shareholders by making claims on behalf of the subfund where the materiality threshold, the likelihood of recovery, and the costs would be favourable to the unitholders. This claim policy is subject to uncertainties in terms of timeframes and reimbursed amounts.

The amount of reimbursements actually received in respect of these claims is: None.

The situation has not changed since the previous close.

Aggregate exposure

The commitment method is used to calculate the aggregate exposure on financial futures.

Main movements in the portfolio during the period

Securities	Movements ("Acco	ounting currency")

Notes

A. General information

A1. Characteristics and activity of the open-ended UCI

A1a. Investment strategy and profile

The objective of the HSBC Responsible Investment Funds - SRI Euroland Equity subfund is to maximise the subfund's performance over a recommended investment period of at least 5 years by investing in corporate stocks selected on the basis of their good environmental, social and governance practices and their financial quality.

The UCI's prospectus provides a full and accurate description of these characteristics.

A1b. Characteristics of the UCI over the last 5 financial years

A2. Accounting policies

Accounting policies

The annual financial statements are presented for the first time in the form prescribed by ANC regulation 2020-07, as amended by ANC regulation 2022-03.

1 Changes in accounting methods, including presentation, in connection with the application of the new accounting regulation relating to the annual financial statements of undertakings for collective investment with variable capital (ANC regulation 2020-07 as amended)

This new regulation imposes changes in accounting methods, including changes in the presentation of annual financial statements. Comparability with the financial statements for the previous financial vear cannot therefore be achieved.

NB: the statements concerned are (in addition to the balance sheet and the income statement): B1. Change in equity and financing liabilities; D5a. Allocation of distributable amounts relating to net income and D5b. Allocation of distributable amounts relating to net realised gains and losses.

Thus, in accordance with the second paragraph of Article 3 of ANC Regulation 2020-07, the financial statements do not present data from the previous financial year; the previous year's financial statements are included in the notes to the financial statements.

These changes mainly concern:

- the balance sheet structure, which is now presented by types of eligible assets and liabilities, including loans and borrowings:
- the structure of the income statement, which is extensively modified; the income statement includes in particular: exchange rate differences on financial accounts, unrealised gains and losses, realised gains and losses, and transaction fees;
- the removal of the off-balance sheet table (part of the information on the items in this table is now included in the notes);
- the removal of the option to recognise costs included in the cost price (without retroactive effect for funds previously applying the included costs method):
- the distinction between convertible bonds and other bonds, as well as their respective accounting records:
- a new classification of target funds held in the portfolio according to the model: UCITS / AIF / Other;
- the recognition of forward foreign exchange commitments, which is no longer done on the balance sheet but off-balance sheet,

with information on forward foreign exchange contracts covering a specific portion;

- the addition of information relating to direct and indirect exposures to the various markets;
- the presentation of the inventory, which now distinguishes eligible assets and liabilities from forward financial instruments:
- the adoption of a single presentation model for all types of UCI;
- the removal of account aggregation for funds with subfunds.

2 Accounting rules and methods applied during the financial year

General accounting principles apply (subject to the changes described above):

- true and fair view, comparability, going concern;
- accuracy, reliability;
- prudence:
- consistency of accounting methods from one period to the next.

The accrued interest method is used to recognise revenue from fixed income securities.

Purchases and sales of securities are booked excluding expenses.

The euro is the reference currency for the portfolio's accounting.

The duration of the reporting period is 12 months.

Asset valuation rules

The asset valuation rules applied by the accounting manager are outlined below according to the instruments held by the subfund:

The subfund has adopted the euro as the reference currency.

The prices used for the valuation of securities traded on the stock exchange are the closing prices. The prices applied for the valuation of bonds are an average contributor. Funds are valued at their last known price.

Negotiable debt securities with a residual life of more than three months are valued at the market rate, with the exception of variable-rate or adjustable-rate negotiable debt securities not presenting any particular market sensitivity.

A simplified method known as "linearisation" is applied for negotiable debt instruments whose residual lifespan is less than three months with no particular sensitivity to the market on the basis of the crystallised three-month rate.

Repurchase agreements are valued at the contract price.

Firm and optional forward transactions and swap transactions made on OTC markets and authorised under the applicable fund regulations are measured at their market value or at an estimated value using methods chosen by the management company. Interest rate and/or currency swaps are valued at their market value based on the price calculated by discounting future cash flows (principal and interest) at the prevailing market interest and/or exchange rates.

European and foreign futures are valued using their settlement prices.

Interest rate and foreign currency swaps are valued under market conditions.

The valuation of interest-rate swaps against share performance is carried out:

- under market conditions for the fixed income branch
- according to the underlying security rate for the equity branch.

The valuation of Credit Default Swaps (CDS) stems from a model used by the spreads market.

Off-balance sheet commitments in European and foreign futures markets are calculated as follows:

- FUTURES

(Qty x Nominal x Daily price x Contract currency)

- OPTIONS

(Qty x delta) x (Nominal of underlying instrument x Daily price of underlying instrument x Contract currency).

For swaps, the off-balance-sheet commitment corresponds to the nominal value of the contract plus or minus the interest differential and the unrealised capital gain or loss on the closing date.

Transaction fees are recognised in specific accounts of each subfund and are not added to the price.

Financial instruments whose prices were not determined on the day of valuation or whose prices have been adjusted are valued at their probable trading price under the responsibility of the Management Company.

These valuations and the associated justification are provided to the statutory auditor for auditing purposes.

Valuation of financial guarantees

Collateral is valued daily at the market price (mark to market).

Haircuts can be applied to collateral received in the form of securities according to the level of risk.

Margin calls occur daily unless otherwise indicated in the master agreement covering these transactions on in case of agreement between the Management Company and the counterparty on the application of a trigger threshold.

Management fees:

Financial management fees and administrative fees external to the management company cover all fees charged directly to the subfund, with the exception of transaction fees. Transaction fees include intermediation fees (brokerage, stock exchange taxes, etc.) and activity fees, where applicable, which may be collected in particular by the depositary and the management company.

The following fees may be payable in addition to financial management fees and costs of administrative services external to the management company:

- performance commissions. These commissions are paid to the management company when the subfund has exceeded its targets. They are therefore charged to the subfund;
- activity fees charged to the subfund;
- a share of the income from temporary purchases and sales of securities.

In the event of an increase in administrative fees external to the management company equal to or less than 0.10% including tax per year, the subfund's shareholders may be informed by any means.

In that case, the management company will not be required to notify the shareholders in any particular way or offer the option to redeem their shares free of charge.

	Fees charged to the subfund	Base	Scale rate			
			AC shares:	SC shares	ZC shares:	IC and BC shares
1	Financial management fees (*)	Daily net assets	Maximum 1.50% incl. tax	Maximum 0.60% incl. tax	None	Maximum 0.75% incl. tax
2	Operating and other service charges (**)	Daily net assets	Maximum 0.10% incl. tax			
3	Maximum indirect costs (Management commissions and fees)	Daily net assets	Immaterial(***)			
4	Transaction fees	Charged on each transaction	None			
5	Outperformance fee	Daily net assets	None			

^{*} A percentage of management fees may be passed on to third-party marketing agents in return for marketing the subfund.

- Fund registration and listing fees:
- fees related to the subfund's registration in other Member States (including fees charged by advisors (lawyers, consultants, etc.) for carrying out marketing formalities with the local regulator on the asset management company's behalf);
- fees for listing the subfund and publishing net asset values to keep investors informed;
- distribution platform fees (excluding retrocessions), relating to agents in foreign countries that perform a distribution function

Costs for keeping clients and distributors informed

- the costs of drafting and distributing KIDs, prospectuses and regulatory reports;
- the costs of providing regulatory information to distributors;
- the costs of providing information to unitholders by all means;
- information specific to direct and indirect holders; 3: Letters to holders;
- website administration costs;
- translation costs specific to the subfund.

Data costs

- costs of data used for redistribution to third parties
- costs for auditing and promoting labels (e.g. SRI label, Greenfin label)

^{**} Operating and other service charges include:

IV. Depositary, legal, audit, tax fees, etc.

- statutory audit fees;
- depositary fees;
- fees for delegation of administrative and accounting management;
- tax-related fees including those of lawyers and external consultants (recovery of withholding tax on behalf of the fund, local tax agent, etc.);
- legal fees specific to the subfund;
- Costs of creating a new subfund, amortisable over 5 years.

V. Costs relating to compliance with regulatory obligations and regulatory reporting

- fees for submitting regulatory reports to the regulator specific to the subfund;
- fees for compulsory professional associations
- operating charges for deployment of voting policies at General Meetings
- ***The subfund invests less than 20% in UCIs

The following costs may be added to the above-listed fees charged to the subfund:

- contributions due for the management of the subfund pursuant to 4° of Article L. 621-5-3-II-4° of the French Monetary and Financial Code;
- exceptional and non-recurring taxes, levies and government duties (in relation to the subfund);
- exceptional and non-recurring costs for the recovery of receivables (e.g. Lehman) or proceedings to assert a right (e.g. class action).

Swing pricing:

The management company has implemented a swing pricing mechanism to adjust the net asset value of each of the subfunds once a trigger threshold is reached in order to protect the interests of the unitholders present in each of the subfunds.

Under this mechanism, investors bear the portfolio adjustment costs — including transaction fees, bid/offer spreads and taxes or fees applicable to the UCI — relating to investments or disinvestments when there are significant numbers of subscriptions and redemptions.

When the net balance of investor subscription and redemption orders exceeds a predefined threshold, called the "trigger point", the NAV is adjusted.

The NAV is adjusted up or down if the balance of subscriptions—redemptions is respectively positive or negative, so as to take into account the readjustment costs attributable to the net subscription and/or redemption orders.

The trigger threshold is expressed as a percentage of the subfund's net assets.

The parameters for the trigger point and the NAV adjustment factor are determined by the Management Company and periodically reviewed.

The adjusted ("swung") NAV is the subfund's only NAV and is therefore the only NAV published and communicated to unitholders.

By applying swing pricing with a trigger threshold, it is possible that the UCI's volatility will not come from only the volatility of the financial instruments in the portfolio.

In accordance with the regulatory provisions, the management company does not communicate the trigger points and ensures that internal communication channels are restricted so as to safeguard the confidential nature of the information.

Appropriation of distributable amounts

Definition of distributable amounts

Distributable amounts consist of the following:

Income:

Net revenue plus retained earnings and plus or minus the balance of the accrued income account.

Gains and losses:

Capital gains realised, net of costs, minus realised losses, net of costs, recognised during the fiscal year, plus net gains of the same type recognised in previous fiscal years that were not distributed or accumulated, plus or minus the balance of accrued gains.

The amounts referred to as "income" and "gains and losses" may be distributed, in whole or in part, independently of each other.

Distributable sums are paid within a maximum period of five months following the end of the financial year.

Where the UCI is authorised under Regulation (EU) No. 2017/1131 of the European Parliament and of the Council of 14 June 2017 on money market funds, by way of derogation from the provisions of I, distributable sums may also include unrealised gains.

NOTES TO THE ANNUAL FINANCIAL STATEMENTS

1. Accounting policies

The annual financial statements are presented in the form prescribed by ANC regulation no. 2014-01, as amended.

General accounting principles are applied:

- true and fair view, comparability, going concern;
- accuracy, reliability;
- prudence;
- consistency of accounting methods from one period to the next.

The accrued interest method is used to recognise revenue from fixed income securities.

Purchases and sales of securities are booked excluding expenses.

The euro is the reference currency for the portfolio's accounting.

The duration of the reporting period is 12 months.

Asset valuation rules

The asset valuation rules applied by the accounting manager are outlined below according to the instruments held by the subfund:

The subfund has adopted the euro as the reference currency.

The prices used for the valuation of securities traded on the stock exchange are the closing prices. The prices applied for the valuation of bonds are an average contributor. Funds are valued at their last known price.

Negotiable debt securities with a residual life of more than three months are valued at the market rate, with the exception of variable-rate or adjustable-rate negotiable debt securities not presenting any particular market sensitivity.

A simplified method known as "linearisation" is applied for negotiable debt instruments whose residual lifespan is less than three months with no particular sensitivity to the market on the basis of the crystallised three-month rate.

Repurchase agreements are valued at the contract price.

Firm and optional forward transactions and swap transactions made on OTC markets and authorised under the applicable fund regulations are measured at their market value or at an estimated value using methods chosen by the management company. Interest rate and/or currency swaps are valued at their market value based on the price calculated by discounting future cash flows (principal and interest) at the prevailing market interest and/or exchange rates.

European and foreign futures are valued using their settlement prices.

Interest rate and foreign currency swaps are valued under market conditions.

The valuation of interest-rate swaps against share performance is carried out:

- under market conditions for the fixed income branch
- according to the underlying security rate for the equity branch.

The valuation of Credit Default Swaps (CDS) stems from a model used by the spreads market.

Off-balance sheet commitments in European and foreign futures markets are calculated as follows:

- FUTURES

(Qty x Nominal x Daily price x Contract currency)

- OPTIONS

(Qty x delta) x (Nominal of underlying instrument x Daily price of underlying instrument x Contract currency).

For swaps, the off-balance-sheet commitment corresponds to the nominal value of the contract plus or minus the interest differential and the unrealised capital gain or loss on the closing date.

Transaction fees are recognised in specific accounts of each subfund and are not added to the price.

Financial instruments whose prices were not determined on the day of valuation or whose prices have been adjusted are valued at their probable trading price under the responsibility of the Management Company. These valuations and the associated justification are provided to the statutory auditor for auditing purposes.

Valuation of financial guarantees

Collateral is valued daily at the market price (mark to market).

Haircuts can be applied to collateral received in the form of securities according to the level of risk.

Margin calls occur daily unless otherwise indicated in the master agreement covering these transactions on in case of agreement between the Management Company and the counterparty on the application of a trigger threshold.

Financial management

Management fees and running costs cover all costs relating to the Fund for financial, administrative, and accounting management, custodianship, distribution, auditing, etc.

These fees are charged to the Fund's income statement.

Management fees do not include transaction fees. For more information on the costs actually billed to the fund, please see the prospectus.

They are recognised on a pro rata basis each time the net asset value is calculated.

The aggregate of these fees complies with the maximum fee rate as a percentage of the net assets given in the fund's prospectus or rules:

FR0010250324 - HSBC RESPONSIBLE INVESTMENT FUNDS - SRI EUROLAND EQUITY ZC share: Maximum fee rate of 0%

FR0010250316 - HSBC RESPONSIBLE INVESTMENT FUNDS - SRI EUROLAND EQUITY IC share: Maximum fee rate of 0.75% including tax

FR0014003KN0 - HSBC RESPONSIBLE INVESTMENT FUNDS - SRI EUROLAND EQUITY SC share: Maximum fee rate of 0.60% including tax

FR0000437113 - HSBC RESPONSIBLE INVESTMENT FUNDS - SRI EUROLAND EQUITY AC share: Maximum fee rate of 1.50% including tax

FR0013287257 - HSBC RESPONSIBLE INVESTMENT FUNDS - SRI EUROLAND EQUITY BC share: Maximum fee rate of 0.75% including tax

Operating and other service charges are a maximum of 0.10% including tax for the AC, SC, ZC, IC and BC shares and a maximum of 0.20% including tax for the IT share.

Indirect charges have a non-significant maximum rate, as the subfund invests less than 20% in UCIs.

Swing pricing

The management company has implemented a swing pricing mechanism to adjust the net asset value of each of the subfunds once a trigger threshold is reached in order to protect the interests of the unitholders present in each of the subfunds.

Under this mechanism, investors bear the portfolio adjustment costs — including transaction fees, bid/offer spreads and taxes or fees applicable to the UCI — relating to investments or disinvestments when there are significant numbers of subscriptions and redemptions.

When the net balance of investor subscription and redemption orders exceeds a predefined threshold, called the "trigger point", the NAV is adjusted.

The NAV is adjusted up or down if the balance of subscriptions/redemptions is respectively positive or negative, so as to take into account the readjustment costs attributable to the net subscription and/or redemption orders.

The trigger threshold is expressed as a percentage of the subfund's net assets.

The parameters for the trigger point and the NAV adjustment factor are determined by the Management Company and periodically reviewed.

The adjusted ("swung") NAV is the subfund's only NAV and is therefore the only NAV published and communicated to unitholders.

By applying swing pricing with a trigger threshold, it is possible that the UCI's volatility will not come from only the volatility of the financial instruments in the portfolio.

In accordance with the regulatory provisions, the management company does not communicate the trigger thresholds and ensures that internal communication channels are restricted so as to safeguard the confidential nature of the information.

Appropriation of distributable amounts

Definition of distributable amounts

Distributable amounts consist of the following:

Income:

Net income for the financial year is equal to the amount of interest, arrears, premiums and bonuses, dividends, directors' fees and any other income relating to the securities that constitute the portfolio, plus income from temporary cash holdings, less management fees and borrowing costs.

Retained earnings are added to income and the balance of accrued income is added or subtracted as appropriate.

Gains and losses:

Capital gains realised, net of costs, minus realised losses, net of costs, recognised during the fiscal year, plus net gains of the same type recognised in previous fiscal years that were not distributed or accumulated, plus or minus the balance of accrued gains.

Appropriation of distributable amounts:

Share(s)	Appropriation of net income	Appropriation of net realised gains or losses
HSBC RESPONSIBLE INVESTMENT FUNDS - SRI EUROLAND EQUITY AC share	Accumulated	Accumulated
HSBC RESPONSIBLE INVESTMENT FUNDS - SRI EUROLAND EQUITY BC share	Accumulated	Accumulated
HSBC RESPONSIBLE INVESTMENT FUNDS - SRI EUROLAND EQUITY IC share	Accumulated	Accumulated

SFDR Annex

Periodic disclosures for financial products covered by Article 8, paragraphs 1, 2 and 2a of Regulation (EU)) 2019/2088 and by Article 6(1) of Regulation (EU) 2020/852

Sustainable investment

means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm either of these objectives and that the financial product's investee companies follow good governance practices.

The **EU Taxonomv** is a classification system laid down in Regulation (EU) 2020/852, establishing a list environmentally sustainable economic activities. This regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective are not necessarily aligned with the

Product name: HSBC RESPONSIBLE INVESTMENT FUNDS - SRI EUROLAND EQUITY

Legal entity identifier: 969500MDTK64JZ4B4F91

Environmental and/or social characteristics

Does this financial product have a sustai	nable investment objective?
●● □ Yes	● ✓ No
It made sustainable investments with an environmental objective: _% in economic activities that qualify as environmentally sustainable under the EU Taxonomy	It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a minimum proportion of 57.25% sustainable investments
in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	with an environmental objective and made in economic activities that qualify as environmentally sustainable under the EU Taxonomy
	with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	with a social objective
lt made sustainable investments with a social objective: _%	It promoted E/S characteristics but did not make any sustainable investments.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Sustainability indicators measure how the environmental or social characteristics promoted by the

Taxonomy.

The subfund promotes E, S, and G characteristics by investing in equities of eurozone countries through a selection of corporate securities chosen for their financial qualities and their good environmental, social, and governance practices according to a best-in-class approach. This approach consists of selecting the best companies in each sector based on environmental, social, and governance criteria. For each ESG pillar, several criteria are used, including CO2 emissions for the E pillar, the management of staff for the S pillar, and the level of independence of directors for the G pillar. In addition, the subfund will:

financial product are attained.

- Exclude issuers that have one or more confirmed breaches or at least two presumed breaches of one of the ten principles of the United Nations Global Compact or of the OECD Guidelines for Multinational Enterprises.
- Exclude shares of companies involved in the production of controversial weapons or their components. Controversial weapons include, but are not limited to, anti-personnel mines, depleted uranium weapons and white phosphorus when used for military purposes. This exclusion is in addition to the exclusion policy on weapons prohibited by international treaties.
- Exclude shares of companies in the Defence sector.
- Exclude shares of companies engaged in thermal coal activities. Companies that derive more than 10% of their revenue from electricity generated using thermal coal are partially excluded. Mining companies are completely excluded.
- Exclude shares of companies involved in tobacco production.
- Carefully consider environmental issues through voting and engagement activities.

The subfund is actively managed and does not track a benchmark. The indicator used by the subfund to measure performance is the MSCI EMU (NR). However, it has not been designated to determine whether the subfund is aligned with the environmental or social characteristics it promotes.

How did the sustainability indicators perform?

Indicator	Fund	Benchmark
ESG Score	6.84	6.31
E Pillar	7.58	7.07
S Pillar	6.03	5.45
G Pillar	6.84	6.40
GHG emissions intensity of beneficiary companies - tonnes of CO2 equivalent per million euros of revenue	78.86	97.87
4. Exposure to companies active in the fossil fuel sector	5.54%	8.45%
10. Violations of the principles of the United Nations Global Compact and the OECD Guidelines for Multinational Enterprises	0.00%	0.00%
14. Exposure to companies involved in the production of controversial weapons or their components (anti-personnel mines, depleted uranium weapons, white phosphorus when used for military purposes)	0.00%	0.00%

The data in this report are as of 31 December 2024, based on the average of the positions at the end of each of the four quarters of the financial year ended 31 December 2024.

What were the objectives of the specific sustainable investments that the financial product intended to make and how did its sustainable investments help meet such objectives?

The subfund's sustainable investments are aligned with its environmental characteristics.

The identification and ESG analysis of companies are performed as part of the investment decision-making process to reduce sustainability risks and increase returns.

How did the specific sustainable investments that the financial product made not cause significant harm to any environmental or social sustainable investment objective?

The principle of "do no significant harm" to environmental or social objectives applies only to the underlying sustainable investments of the subfund. This principle is incorporated into the investment decision-making process, which includes consideration of principal adverse impacts.

How have the indicators for adverse impacts on sustainability factors been taken into account?

HSBC Asset Management's "do no significant harm" (DNSH) assessment of issuers as part of its sustainable investment process includes consideration of principal adverse impacts (PAI). It involves a holistic analysis of the company's multiple sustainability impacts rather than focusing on a single factor. When an issuer is identified as potentially controversial, it cannot be considered a sustainable investment. Thus, all relevant PAI are reviewed and integrated into the investment process using an approach that combines exclusions (sector-specific, most severe ESG controversies, and normative exclusions, etc.} with voting and shareholder engagement activities to instil and support a positive change dynamic within companies. Furthermore, a company will be considered unsustainable when it is not compliant with the Principles of the United Nations Global Compact and its associated international standards, conventions and treaties, or if it is involved in weapons banned by international conventions. With the exception of these last two PAIs, we use proxies. In our view, the setting of exclusion thresholds (e.g. GHG emissions) for each PAI is not always relevant and could compromise the fact that many sectors and companies are in a transition strategy. In addition, engagement is essential to ensure that companies with limited disclosure, particularly in emerging economies, are initially excluded from the definition of sustainable investment and allow us to be a catalyst for positive environmental or social change. For example, we use a 10% threshold on

Principal adverse impacts

are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social, and employee matters, respect for human rights, anti-corruption, and anti-bribery matters.

revenues from thermal coal mining (and coal-fired power generation) as an exclusion filter to indirectly address all PAIs related to greenhouse gas emissions. HSBC's sustainable investment methodology is available on the management company's website: www.assetmanagement.hsbc.fr/fr/retail-investors/about-us/responsible-investors/policies

Were the fund's sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

HSBC is committed to applying and promoting international standards. The ten principles of the United Nations Global Compact are among the priorities of HSBC's Responsible Investment Policy. These principles include non-financial risks such as human rights, labour standards, the environment, and anti-corruption. HSBC is also a signatory to the United Nations Principles for Responsible Investment. They provide a framework for the identification and management of sustainability risks. In this subfund, companies with a proven violation of one of the 10 principles of the United Nations Global Compact or at least two alleged violations are systematically excluded. Companies are also assessed according to international standards such as the OECD Guidelines for Multinational Enterprises.

The EU Taxonomy sets out a "do no significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives, and is accompanied by criteria specific to the EU.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the European Union criteria for environmentally sustainable economic activities. Any other sustainable investments must also do no significant harm to any environmental or social objectives.

How did this financial product take into consideration principal adverse impacts on sustainability factors?

The principal adverse impacts of investments are considered in the management of the subfund as follows:

For the selection of investments, the manager has chosen two environmental indicators: "Greenhouse Gas Intensity" and "Exposure to companies active in the fossil fuel sector". The subfund's consideration of these indicators stems from, in particular, the application of our coal phase-out policy as well as sectoral exclusions set out by the label guidelines. In addition, the manager favours companies with low CO2 emissions or companies working to reduce their carbon intensity.

· Exclusion of issuers:

Considered non-compliant with the principles of the United Nations Global Compact and the OECD Guidelines for Multinational Enterprises;

- Exposed to controversial weapons.

Lastly, the subfund takes into consideration the principal adverse impacts in its engagement approach, which incorporates several levers for action including 1) direct dialogue with companies about their consideration of environmental and social issues to ensure that they are able to face the future and maintain long-term financial viability, 2) the exercising of voting rights by which we express our support for positive development initiatives or, conversely, our disagreement when directors do not meet our expectations, and 3) a gradual escalation procedure with companies when the ESG risks or controversies to which they are exposed are not managed. In practice, the Greenhouse Gas Intensity indicator is taken into consideration, in particular, through dialogue with companies to assess how their carbon neutrality transition plans take into account impacts on employees, supply chains, communities and consumers.

The list comprises the investments making up the largest proportion of the financial product's investments at: Average of the positions at the end of each of the four quarters of the reference period ended 31/12/2024

The asset allocation

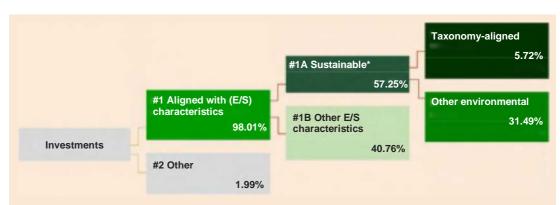

describes the proportion of investments in specific assets.

What was the proportion of sustainability-related investments?

The proportion of sustainable investments was 57.25%.

The management company's sustainable investment methodology is available in the section "SFDR" Appendix of Regulation (EU) 2019/2088 of the annual report.

What was the asset allocation?

The category **#1 Aligned** with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

The category **#2 Other** includes the remaining investments of the financial product that are neither aligned with the environmental or social characteristics nor are qualified as sustainable investments.

The category **#1 Aligned** with E/S characteristics covers:

- the sub-category #1A Sustainable covering environmentally and socially sustainable investments,
- the sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments
- * A company or issuer that is considered a sustainable investment can contribute to both an environmental and a social objective that may or may not be aligned with the EU taxonomy. The figures in the chart above take this into account, but a company or issuer can only be counted once in category #1A Sustainable.

0/ of

In which economic sectors were the investments made?

Sector / Sub-Sector	% of assets
Financial	23.54%
Industry	20.85%
Information Technology	11.11%
Consumer discretionary	9.99%
Telecommunications services	7.44%
Consumer staples	7.33%
Utilities	6.81%
Electricity	6.15%
Materials	5.04%
Health	3.67%
Cash and derivatives	1.99%
Real estate	1.70%
Energy	0.54%
Oil and Gas Refining and Marketing	0.54%
Total	100.00%

To comply with the EU Taxonomy, the criteria applicable to natural gas include emission limits and switching to entirely renewable sources of electricity or to low-carbon fuel by the end of 2035. For **nuclear** energy, the criteria include comprehensive safety and waste management rules.

VO

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

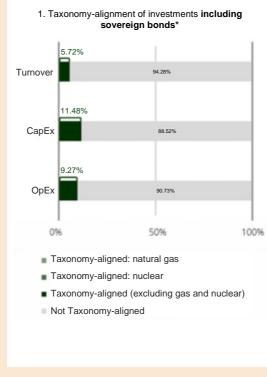

The proportion of sustainable investments aligned with the EU taxonomy is shown in the asset allocation table above.

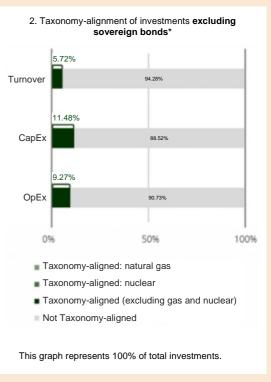

•	Has the financial product invested in natural gas and/or nuclear generation activities that are compliant with the EU Taxonomy?				
	☐ Yes:				
		☐ In natural gas	☐ In nuclear energy		

EU Taxonomyaligned activities are expressed as a percentage of:

- revenue to reflect the current ecological nature of investee companies;
- capital expenditure (CapEx) to show the green investments made by investee companies, relevant for a transition to a green economy;
- operational expenses (OpEx) reflecting green operational activities of investee companies.

The two graphs below show, in green, the percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

*For the purpose of these graphs, "sovereign bonds" include all sovereign exposures.

¹ Natural gas and/or nuclear energy generation activities only qualify as EU Taxonomy-eligible if they help mitigate climate change ("mitigation of climate change") and cause no significant harm to any of the EU Taxonomy objectives (see the explanatory note in the sidebar on the left). The set of criteria for natural gas and nuclear energy generation activities that are compliant with the EU Taxonomy are set out in Commission Delegated Regulation (EU) 2022/1214.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

What was the share of investments made in transitional and enabling activities?

During the reporting period, the proportion of investments made in transitional activities was 0.24% and the proportion of investments made in enabling activities was 6.62%.

How did the percentage of EU Taxonomy-aligned investments compare with previous reference periods?

Indicator	2023-24	2022-23	2021-22
Revenue - Taxonomy aligned: fossil gas	N/A	N/A	0.00%
Turnover - Taxonomy-aligned: nuclear	N/A	N/A	0.00%
Revenue - Taxonomy aligned (excluding gas and nuclear)	5.72%	5.71%	0.00%
Revenue - Not Taxonomy-aligned	94.28%	94.29%	100.00%
CapEx - Taxonomy-aligned: natural gas	N/A	N/A	0.00%
CapEx - Taxonomy-aligned: nuclear	N/A	N/A	0.00%
CapEx - Not Taxonomy-aligned	11.48%	12.18%	0.00%
CapEx - Taxonomy-aligned (excluding gas and nuclear)	88.52%	87.82%	100.00%
CapEx - Taxonomy-aligned: natural gas	N/A	N/A	0.00%
OpEx - Taxonomy-aligned: nuclear	N/A	N/A	0.00%
OpEx - Taxonomy-aligned (excluding gas and nuclear)	9.27%	9.21%	0.00%
OpEx - Not Taxonomy-aligned	90.73%	90.79%	100.00%

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

Sustainable investments with an environmental objective not aligned with the EU taxonomy accounted for 31.49%. The fund has not committed to investments aligned with the EU taxonomy.

What was the share of socially sustainable investments?

The subfund does not commit to having a minimum share of socially sustainable investments. However, when assessing issuers, the subfund manager does look at the social characteristics, respect for human rights and employee rights, management conduct, and corporate social responsibility of the companies.

What investments were included under "Other", what was their purpose and were they covered by any minimum environmental or social safeguards?

The subfund may hold cash as well as investments for which no non-financial analysis could be performed due to the unavailability of ESG data.

What actions have been taken to attain the environmental and/or social characteristics during the reference period?

The subfund promotes ESG characteristics by investing primarily in companies chosen for their good environmental, social and governance practices and their financial qualities. This approach consists of selecting the best companies within the investment universe according to ESG criteria. During 2024, we constantly adjusted the portfolio to meet our commitments. For example, we sold our shares in BNP Paribas, Commerz Bank and Bouygues, which were no longer compatible with our objectives.

How did this financial product perform compared with its benchmark?

The subfund is actively managed and does not track a benchmark. There is no benchmark representative of our management philosophy and therefore of our investment universe, nor has any index been designated to determine whether the subfund is aligned with the environmental or social characteristics that it promotes. The information requested in this section is therefore not applicable to this product.

Benchmarks are indexes used to gauge whether the financial product attains the environmental or social characteristics that it promotes.

- How does the benchmark differ from a broad market index?
 Not applicable
- How did this financial product perform with regard to the sustainability indicators designed to determine the benchmark's alignment with the environmental or social characteristics promoted?
 Not applicable
- How did this financial product perform compared with its benchmark?
 Not applicable
- How did this financial product perform compared with the broad market index?
 Not applicable

SICAV HSBC RESPONSIBLE INVESTMENT FUNDS -**SRI EUROLAND EQUITY**

Energy and Climate Act (LEC) report - Article 29

As the subfund has assets in excess of €500 million, the Article 29 report under the French Energy and Climate Act No. 2019-1147 of 8 November 2019 (LEC) is available on the management company's website www.assetmanagement.hsbc.fr. This document is published within 6 months of the subfund's accounting close.

Subfund:

HSBC Responsible Investment Funds - SRI Euro Bond

Activity report

This year, the main issue for investors has long been when the monetary policy easing cycle will finally start and what its trajectory will be. One last rate hike by the Fed was even mentioned, before being rejected by Jerome Powell at the May meeting. It was only in June, after reassuring inflation figures, a downturn in PMI leading indicators (after a 5-month increase), and thanks to the expected easing of the ECB's key rates, that investors took note of the change of course on monetary policies. In the first half of the year, government interest rates rose on the back of still high core inflation and better-than-expected growth rates. The start of the cycle of cuts in key rates then led to a drop in interest rates that lasted until the end of September, and a sharp steepening of the yield curve. The spread between German 10-year and 2-year yields thus fell from -40 bps to +30 bps over the year as inflation fears remained present, especially recently in the context of the return to office of Donald Trump in the United States. The uncertainty is even greater as markets face heterogeneous growth dynamics across different geographical regions.

Meanwhile, credit markets had a positive year with a compression in risk premiums, with the tightening even more pronounced for high yield bonds and subordinated debt. The real estate sector also outperformed again this year, as in 2023, offsetting the sharp depreciation of 2022. Note that the credit asset class benefited from subscription flows throughout the year, which favoured a good supply/demand balance.

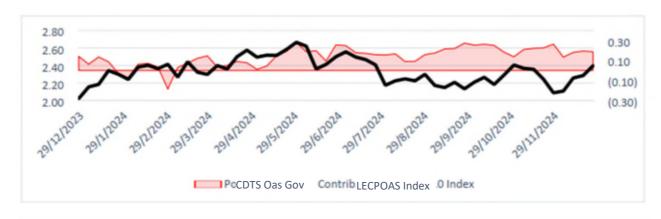

Political news was more turbulent. The European elections on 9 June confirmed the rise of right-wing and nationalist parties, but the subsequent announcement of the dissolution of the French National Assembly surprised the markets in particular, pushing up the spread between French and German government rates, especially as no majority emerged from the legislative elections and instability remained with the fall of the Barnier government in December. Germany is also experiencing political instability with the defeat of the government coalition and upcoming early elections.

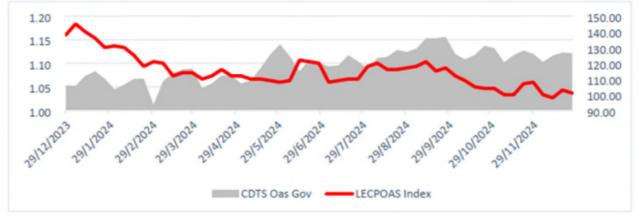

In terms of management, the portfolio's duration was increased slightly from May to above that of the benchmark index, in anticipation of future key rate cuts in a context of slowing inflation and sluggish growth. The positioning on peripheral government bonds remained broadly stable with a slight underweight position on Spain partially offset by an overweight position on Portugal. The weighting of Italy was increased very slightly to be very close to that of the index, while we maintained a clear underweight position on French government debt. In addition, the strategic overexposure to credit was maintained, encouraged by the good performance of the market and sustained investor demand, with good diversification of business sectors. In terms of positioning on the curve, the very long end was gradually reduced in favour of the 5-10 year segment.

Throughout the period, we actively participated in the primary market, subject to the issuers' ESG ratings and the premiums offered compared to the secondary market, receiving mostly a reduced allocation, such as Goodman 2030 (15%) and Legrand 2034 (16%). We also added to certain lines, depending on the opportunities, while selling issuers that are part of the 3rd quartile or no longer part of the eligible universe (4th quartile) due to their ESG rating (e.g. Hammerson, Microsoft, Tennet, etc.). At the end of the year, we made adjustments aimed at reducing the portfolio's carbon intensity by reducing investments in the chemical sector (Air Liquide, Linde, etc.).

The fund's relative performance was above that of the index, with a positive contribution from credit due to the tightening of risk premiums, supported by an attractive carry and active management. The financials and utilities sectors were the largest contributors to relative performance. The fund's duration exposure and underweighting of French government debt also contributed positively to relative performance.

At the end of December, the duration of the subfund was 6.53 and the current yield was 3.26%.

Performance

At the close of the fiscal year, the subfund posted performance of 2.27% for the AC share, 2.68% for the AC and AD shares (coupons reinvested), 2.68% for the BC and IC shares, and 3.09% for the ZC share.

For the sake of comparison, the performance of the benchmark "for information" was 2.61%.

Past performance is not an indicator of the future results of the SICAV subfund.

Information on distributed income eligible for the 40% tax allowance

In accordance with the provisions of Article 41 sexdecies H of the French General Tax Code, income from distributing unit classes is subject to a 40% tax allowance.

303

Information on environmental, social, and governance (ESG) criteria

In accordance with Article L.533-22-1 of the French Monetary and Financial Code, the policy on considering environmental, social, and governance quality (ESG) criteria in the investment strategy is available on the management company's website at www.assetmanagement.hsbc.fr.

Further information on the inclusion of ESG criteria in the investment policy over the financial year.

The transparency code for the subfund is available to the public online at www.assetmanagement.hsbc.fr and provides detailed information on the subfund's SRI approach.

"SFDR" Annex to Regulation (EU) 2019/2088 and its implementing technical standards

The subfund promotes environmental or social characteristics within under Article 8 of Regulation (EU) 2019/2088 of 27 November 2019 on sustainability-related disclosures in the financial services sector ("SFDR").

Information on environmental or social characteristics is available in the SFDR appendix of the annual report.

The management company's sustainable investment methodology is as follows:

304

Sustainable investment within the meaning of Article 2(17) of the European SFDR

The SFDR (EU Regulation 2019/2088 of the European Parliament and of the Council of 27 November 2019) on sustainability-related disclosures in the financial services sector comes into force in 2021, with the obligation for financial institutions to be transparent in their communication on sustainable investment strategies that incorporate environmental, social and governance (ESG) issues.

Under this regulation, as provided for in Article 2, point |17| of the SFDR, sustainable investment is defined as an investment that generates positive environmental and/or social outcomes. The challenge for asset managers has been to define and calculate the net positive contribution of companies to environmental and social issues, while ensuring that this positive contribution is not accompanied by negative impacts.

How is the sustainable contribution of issuers measured?

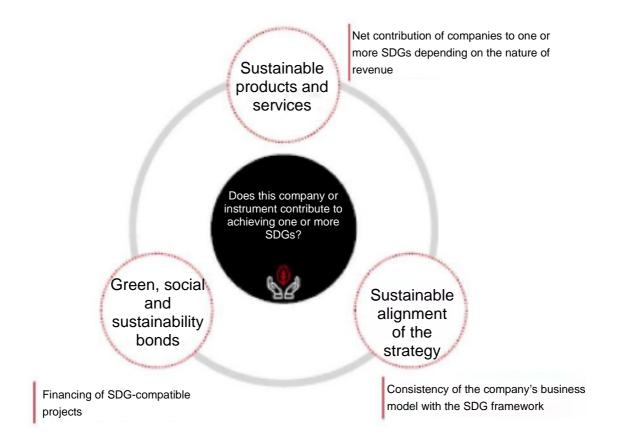

- We have developed a proprietary methodology to determine whether an instrument/issuer can be defined as a "sustainable investment" within the meaning of SFDR Article 2(17) and whether it can be taken into account in the calculation of the proportion of sustainable assets in portfolios.
- Since 2022, our methodology has evolved from seeking to align revenue with the United Nations Sustainable Development Goals (SDGs) to a broader approach that also incorporates the sustainable quality of issuers' business models, operations and sustainability strategies. This broadening of the scope of analysis better reflects the commitment and actions taken by companies to meet the challenges of sustainable development.
- Our assessment also includes a verification of the principle of Do No Significant Harm (DNSH) while taking good governance practices into account. This review takes into account the principle adverse impacts (PAI) in accordance with the SFDR. PAIs are a selection of environmental and social indicators to consider and report on, including greenhouse gas (GHG) emissions, carbon intensity and footprint, discharges and gender pay gaps.

Source: HSB Asset Management

Overview of the general investment process, which may differ depending on the product, the customer's mandate, or market conditions

Assessing the sustainable quality of an investment

Our methodology is based on the assessment of an investment's ability to contribute to the United Nations Sustainable Development Goals (SDGs) and has three dimensions¹:

An in-depth analysis is carried out on the basis of several external data sources, as well as internal analyses and research. These data sources include Sustainalytics, S&P Trucost and FTSE Green Revenue, as well as our proprietary databases on companies' green shares and their eligibility for the European taxonomy².

Based on sustainability thresholds defined for each of the analysed criteria (see details on page 3), issuers/instruments will be considered sustainable if they meet at least one of the three dimensions mentioned above.

Overview of the general investment process, which may differ depending on the product, the customer's mandate, or market conditions

306

2

⁽¹⁾ These three dimensions and their respective thresholds or indicators may be subject to change over time, without notice, depending on, for example, regulatory changes or clarifications, data availability, technological progress, etc. The parameters are as of the date indicated.

⁽²⁾ The European taxonomy refers to the classification of economic activities with a positive impact on the environment. Its objective is to direct investments towards sustainable – i.e. "green" – activities. https://finance.ec.europa.eu/sustainable-finance/tools-and-standards/eu-taxonomy-sustainable-activities en

The three dimensions of sustainability¹

3

To what extent does an investment contribute to one or more of the 17 SDGs?

Sustainable products and services

Current or expected sustainable net revenue in 3-5 years >=30%

Measure of the percentage of sustainable net revenue aligned with one or more of the 17 SDGs = measure of current or future revenue aligned with at least one of the SDGs (CAPEX², OPEX³ or EBITDA⁴), minus non-sustainable products and services, tobacco, thermal coal, prohibited weapons, the most severe environmental, social and governance (ESG) controversies, etc.

Quantitative score

Sustainable alignment of the strategy

Business models

Sustainable assessment of the business model: >=50% of the assessment questionnaire responses must obtain the highest score.

Assessing the sustainable quality of a company's business model integrates its operations and value chain, its sustainable development strategy and the management of the impacts of its activities on its environment and on communities. The positive contribution is identified based on alignment with the SDGs⁵.

Proven & verified (SMART⁵)

Sustainable theme

Thematic revenue of the company >=20%

or Assessment of the sustainable theme >=30%

These thresholds are tailored to emerging sustainable themes in industries that are still growing and/or fragmented, such as the circular economy.

Ambitions and practices

Progress made by the company in implementing its growth strategy verified on the basis of relevant indicators established by competent market bodies, for example credible carbon emission reduction targets approved by the Science Based Targets initiative (SBTi⁶).

Energy transition pathway

Assessment of activities that contribute to the energy transition based on the identification of the green share of the company's products and services (as a percentage of revenue) that makes it possible to finance the energy transition and the transition to renewable energies.

A company is considered a "sustainable transition asset" based on the intensity of its green share and criteria aligned with the Towards Sustainability label⁷ for the traditional energy (Oil & Gas) and power generation sectors.

Green, social and sustainability bonds

Use of bond issue proceeds in a sustainable business

For fixed income instruments, we view green, social and sustainability bonds as sustainable investments due to their clear and direct contribution to environmental and social goals. Green, social and sustainable bond instruments, as defined by the International Capital Market Association ("ICMA")⁸ and structures in accordance with its principles or guidelines, contribute, by their very design, to achieving environmental and/or social objectives aligned with the SDGs.

Source: HSB Asset Management

Overview of the general investment process, which may differ depending on the product, the customer's mandate, or market conditions

¹ These three dimensions and their respective thresholds or indicators may be subject to change over time, depending on, for example, regulatory changes or clarifications, data availability, technological progress, etc.

² Capital expenditure or CÁPEX, representing the capital invested for a company to acquire or modernise fixed, physical or non-consumable assets. Investment expenditures are primarily one-time investments in non-consumable assets used to maintain the existing operating levels within a company and to promote its future growth. Investment expenses server to buy or invest in tangible assets, such as real estate assets, raw materials, factories, buildings and equipment, which benefit the company beyond a single fiscal year. Intangible and non-physical assets, such as patents and licences, may also be considered as capital expenditure.

Operating expenses, or OPEX, include green costs, overheads and administrative costs, which are costs incurred as part of the main activities of the company, or overheads.
 EBITDA (earnings before interest, taxes, depreciation and amortisation) is another measure of a company's profitability other than net profit. By eliminating

[&]quot;EBITDA (earnings before interest, taxes, depreciation and amortisation) is another measure of a company's profitability other than net profit. By eliminating non-cash depreciation charges, as well as taxes and debt costs dependent on the capital structure, EBITDA attempts to represent the cash profit generated by the company's activities.

⁵ Specific, measurable, achievable, realistic and time-bound

⁶ Science-based targets provide companies with a clear path to reduce their greenhouse gas emissions, thereby helping to prevent the worst effects of climate change and preparing businesses for future growth. The targets are considered "science-based" if they are aligned with what the latest climate science deems necessary to meet the goals of the Paris Agreement, namely limiting global warming to 1.5°C above pre-industrial levels.

^{*} mww.icmagroup.org/assets/documents/Sustainable-finance/2022-updates/Mapping-SDGs-to-GSS-Bonds_June-2022-28062022.pdf

Do no significant harm principle

4

Our methodology verifies the absence of significant harm (DNSH) while taking good governance practices into account.

Our sustainable investments meet the requirements of the DNSH principle as defined by the SFDR (article 2(17) to the extent that they apply our exclusion policy detailed below:

DNSH principle – exclusions

For corporate bonds:

- Controversial and banned weapons score ²
- Revenue from tobacco production > 0%³
- Revenue from coal mining > 10%³
- Revenue from energy production via thermal coal > 10%³
- Non-compliance with the United Nations Global Compact ^{3,4}
- Reporting of the most serious controversies³

For government bonds:

- Reporting a breach with regard to a social issue³
- Any country on the HSBC sanctions list

The DNSH principle is examined in the same way as the good governance of the companies held in the portfolio, which forms the basis of our fundamental analysis and investment process.

Assessment of governance practices

- Our reflection process goes beyond governance scores and ESG scores. The quality of governance is assessed
 on the basis of criteria specified in the investment process, including ethics, corporate culture and values,
 governance structure and corruption.
- We determine the materiality of governance through an analysis of the governance structure, controversies, compliance with the principles of the UN Global Compact and the OECD guidelines for multinational companies.
- At a minimum, we exclude the most severe controversies for our actively managed funds.

Overview of the general investment process, which may differ depending on the product, the customer's mandate, or market conditions

⁽¹⁾ At end-December 2022.

⁽²⁾ The data comes in particular from ISS-Ethix

⁽²⁾ The data comes in particular from Sustainalytics. Examples of controversies: activities related to child labour, major environmental damage, corruption, pollution, etc.

⁽³⁾ The United Nations Global Compact is a voluntary initiative based on the commitment of companies to implement universal principles of sustainable development and build partnerships to support the United Nations goal: https://unglobalcompact.org/.

Spotlight on the Sustainable Development Goals

5

The 2030 Sustainable Development Agenda, adopted by all member states of the United Nations, establishes a common plan for peace and prosperity for people and the planet, now and in the future.

At the heart of this agenda are the 17 SDGs, which call for action by all countries – both developed and developing – under a global partnership.

These goals were designed with the understanding that eradicating poverty and other deprivation must go hand in hand with strategies to improve health and education, reduce inequalities and stimulate economic growth, tackle climate change and work to preserve our oceans and forests.

For more information, please visit https://sdgs.un.org/goals.

Incidents affecting the subfund during the fiscal year and forthcoming

> 7 March 2024

Registration in Malta of the following shares:

Shares	ISIN code
AC (EUR)	FR0010061283
AD (EUR)	FR0011332733

> 4 June 2024

Update of regulatory documentation with the following changes:

- ✓ Update of recurring costs and performance scenarios in the Key Information Documents
- ✓ Update of the risk scale from 2 to 3 in the Key Information Documents (KID)
- ✓ Standardisation of the drafting of KIDs (covered by Article 8 of the SFDR and AMF category 1 "central communication") following the recommendations issued by the French Financial Markets Authority (AMF) as part of its SPOT control relating to compliance with asset management companies' contractual non-financial commitments.
- Information on the HSBC Group's responsible investment policies (coal policy and energy policy) has been specified in the prospectus and the SFDR appendix.

> 31 July 2024

Update of the prospectus with the following change:

✓ Removal of the IT share (ISIN code FR0013234937)

> 1 January 2025

Update of regulatory documentation resulting from changes made to label repositories and other changes.

Following the entry into force on 1 March 2024 of the new SRI label framework applicable to French UCIs, the management of the subfunds that retain the label will change to adapt to the additional requirements of the SRI label set out below:

- 1- strengthen the requirements for selecting securities assets in the labelled subfund:
 - a) the market capitalisation weighted average ESG rating must be higher than the average ESG rating of the benchmark used for information purposes. In practice, the ESG rating that the subfund must outperform is calculated by removing the 30% worst stocks, based on exclusion criteria and the ESG rating. The "Best in class" approach has been abandoned in favour of the rating improvement approach.
 - b) the weighing assigned to each ESG pillar in the overall ESG rating is equal to at least 20% and varies according to the specific characteristics of the company's business sector.

- c) a strict exclusion framework exists for each of the three ESG pillars, with the implementation of minimum exclusion criteria.
- d) requirements in terms of monitoring controversies, shareholder engagement and voting policies have been strengthened.
- 2- a) ensure that application of the dual materiality requirement within the meaning of the European SFDR regulation is made systematic in management of the labelled subfund.
- 2- b) ensure consistency between the extra-financial performance of the labelled subfund, its ESG objectives and the associated performance monitoring indicators: the labelled subfund will undertake to outperform its benchmark indicator used for information purposes on two indicators most closely related to its ESG objective: the greenhouse gas (GHG) intensity indicator and the absence of human rights policy indicator.
- 3- incorporate a climate policy into the management of the labelled subfund: in order to limit its impact on the climate, the labelled subfund will no longer be able to invest in companies whose new projects are the exploration, exploitation and refining of fossil fuels, whether conventional or non-conventional.

In addition, in accordance with the changes to the French Financial Markets Authority (AMF) introduced by the regulations dated 6 October 2022, "operating and other service charges" may be deducted based on actual costs (the existing method) or based on a predefined flat rate, in both cases up to the maximum rate provided for in the prospectus.

With effect from 1 January 2025, HSBC Global Asset Management (France) has decided to deduct operating and other service charges based on a predefined flat rate.

The flat rate mentioned in the SICAV's prospectus will therefore be deducted even if the actual costs are lower than this rate. Conversely, if the actual costs are higher than the stated rate, the amount in excess of that flat rate will be borne by the management company.

Lastly, the wording of the following paragraphs of the prospectus will be updated:

- ✓ Restrictions on the issuance and redemption of units for US Persons
- ✓ Restrictions on the issuance and redemption of units for Canada residents
- ✓ Provisional measures prohibiting subscriptions to the fund from 12 April 2022.

Information relating to efficient portfolio management techniques and derivatives used by the subfund of the SICAV, pursuant to AMF position No. 2013-06

Efficient portfolio management techniques

As of the close of the fiscal year, the subfund of the SICAV did not use efficient portfolio management techniques.

Derivatives

As of the close of the fiscal year, the subfund of the SICAV did not use derivatives.

Aggregate exposure

The commitment method is used to calculate the aggregate exposure on financial futures.

Notes

A. General information

A1. Characteristics and activity of the open-ended UCI

A1a. Investment strategy and profile

The management objective is to increase the long-term capital invested by selecting bonds issued by companies or countries in a universe of issues that meet socially responsible economic, environmental, social and governance criteria.

The UCI's prospectus provides a full and accurate description of these characteristics.

A1b. Characteristics of the UCI over the last 5 financial years

A2. Accounting policies

The annual financial statements are presented for the first time in the form prescribed by ANC regulation 2020-07, as amended by ANC regulation 2022-03.

1 Changes in accounting methods, including presentation, in connection with the application of the new accounting regulation relating to the annual financial statements of undertakings for collective investment with variable capital (ANC regulation 2020-07 as amended)

This new regulation imposes changes in accounting methods, including changes in the presentation of annual financial statements. Comparability with the financial statements for the previous financial year cannot therefore be achieved.

NB: the statements concerned are (in addition to the balance sheet and the income statement): B1. Change in equity and financing liabilities; D5a. Allocation of distributable amounts relating to net income and D5b. Allocation of distributable amounts relating to net realised gains and losses.

Thus, in accordance with the second paragraph of Article 3 of ANC Regulation 2020-07, the financial statements do not present data from the previous financial year; the previous year's financial statements are included in the notes to the financial statements.

These changes mainly concern:

- the balance sheet structure, which is now presented by types of eligible assets and liabilities, including loans and borrowings:
- the structure of the income statement, which is extensively modified; the income statement includes in particular: exchange rate differences on financial accounts, unrealised gains and losses, realised gains and losses, and transaction fees;
- the removal of the off-balance sheet table (part of the information on the items in this table is now included in the notes);
- the removal of the option to recognise costs included in the cost price (without retroactive effect for funds previously applying the included costs method):
- the distinction between convertible bonds and other bonds, as well as their respective accounting records:
- a new classification of target funds held in the portfolio according to the model: UCITS / AIF / Other;
- the recognition of forward foreign exchange commitments, which is no longer done on the balance sheet but off-balance sheet, with information on forward foreign exchange contracts covering a specific portion;
- the addition of information relating to direct and indirect exposures to the various markets;
- the presentation of the inventory, which now distinguishes eligible assets and liabilities from forward financial instruments:
- the adoption of a single presentation model for all types of UCI;
- the removal of account aggregation for funds with subfunds.

2 Accounting rules and methods applied during the financial year

General accounting principles apply (subject to the changes described above):

- true and fair view, comparability, going concern;
- accuracy, reliability;
- prudence:
- consistency of accounting methods from one period to the next.

The accrued interest method is used to recognise revenue from fixed income securities.

Purchases and sales of securities are booked excluding expenses.

The euro is the reference currency for the portfolio's accounting.

The duration of the reporting period is 12 months.

Asset valuation rules

The asset valuation rules applied by the accounting manager are outlined below according to the instruments held by the subfund:

The subfund has adopted the euro as the reference currency.

The prices used for the valuation of securities traded on the stock exchange are the closing prices.

The prices applied for the valuation of bonds are an average contributor.

Funds are valued at their last known price.

Negotiable debt securities with a residual life of more than three months are valued at the market rate, with the exception of variable-rate or adjustable-rate negotiable debt securities not presenting any particular market sensitivity.

A simplified method known as "linearisation" is applied for negotiable debt instruments whose residual lifespan is less than three months with no particular sensitivity to the market on the basis of the crystallised three-month rate.

Repurchase agreements are valued at the contract price.

Firm and optional forward transactions and swap transactions made on OTC markets and authorised under the applicable fund regulations are measured at their market value or at an estimated value using methods chosen by the management company.

Interest rate and/or currency swaps are valued at their market value based on the price calculated by discounting future cash flows (principal and interest) at the prevailing market interest and/or exchange rates.

European and foreign futures are valued using their settlement prices.

Interest rate and foreign currency swaps are valued under market conditions.

The valuation of interest-rate swaps against share performance is carried out:

- under market conditions for the fixed income branch
- according to the underlying security rate for the equity branch.

The valuation of Credit Default Swaps (CDS) stems from a model used by the spreads market.

Off-balance sheet commitments in European and foreign futures markets are calculated as follows:

- FUTURES

(Qty x Nominal x Daily price x Contract currency)

- OPTIONS

(Qty x delta) x (Nominal of underlying instrument x Daily price of underlying instrument x Contract currency).

For swaps, the off-balance-sheet commitment corresponds to the nominal value of the contract plus or minus the interest differential and the unrealised capital gain or loss on the closing date.

Transaction fees are recognised in specific accounts of each subfund and are not added to the price.

Financial instruments whose prices were not determined on the day of valuation or whose prices have been adjusted are valued at their probable trading price under the responsibility of the Management Company. These valuations and the associated justification are provided to the statutory auditor for auditing purposes.

Valuation of financial guarantees

Collateral is valued daily at the market price (mark to market).

Haircuts can be applied to collateral received in the form of securities according to the level of risk.

Margin calls occur daily unless otherwise indicated in the master agreement covering these transactions on in case of agreement between the Management Company and the counterparty on the application of a trigger threshold.

Direct exposure to credit markets: principles and rules used to break down the components of the UCI's portfolio (table C1f.):

All elements of the UCI's portfolio exposed directly to the credit markets are shown in this table.

For each item, the various ratings are retrieved: issue and/or issuer rating, long-term and/or short-term rating.

These ratings are retrieved from three rating agencies.

The rules for determining the rating used are then:

1st level: if there is a rating for the issue, it is used to the detriment of the issuer's rating

2nd level: the lowest long-term rating is selected from among those available from the three rating agencies

If there is no long-term rating, the lowest short-term rating is used among those available from the three rating agencies

If no rating is available, the item will be considered as "Unrated".

Lastly, according to the rating selected, the item is categorised according to market standards defining the concepts of "Investment Grade" and "Non-Investment Grade".

Financial management

Financial management fees and administrative fees external to the management company cover all fees charged directly to the subfund, with the exception of transaction fees. Transaction fees include intermediation fees (brokerage, stock exchange taxes, etc.) and activity fees, where applicable, which may be collected in particular by the depositary and the management company.

The following fees may be payable in addition to financial management fees and costs of administrative services external to the management company:

- performance commissions. These commissions are paid to the management company when the subfund has exceeded its targets. They are therefore charged to the subfund;
- activity fees charged to the subfund;
- a share of the income from temporary purchases and sales of securities.

In the event of an increase in administrative fees external to the management company equal to or less than 0.10% including tax per year, the subfund's shareholders may be informed by any means. In that case, the management company will not be required to notify the shareholders in any particular way or offer the option to redeem their shares free of charge.

	Fees charged to the	Descri		Scale	rate	
	subfund	Base	IC and BC shares	IC, BC shares	ZC shares	
1	Financial management fees(*)	Daily net assets	Maximum 0.80% incl. tax	Maximum 0.40% incl. tax	None	
2	Operating and other service charges(**)	Daily net assets	Maximum 0.20% incl. tax.			
3	Maximum indirect costs (Management commissions and fees)	Daily net assets	Immaterial(***)			
4	Transaction fees	Deducted from each transaction	None			
5	Outperformance fee	Daily net assets	None			

^{*} A percentage of management fees may be passed on to third-party marketing agents in return for marketing the subfund

I. Fund registration and listing fees:

- fees related to the subfund's registration in other Member States (including fees charged by advisors (lawyers, consultants, etc.) for carrying out marketing formalities with the local regulator on the asset management company's behalf);
- fees for listing the subfund and publishing net asset values to keep investors informed;
- distribution platform fees (excluding retrocessions), relating to agents in foreign countries that perform a distribution function.

255 Papert on et 21/4/2/2024

^{**} Operating and other service charges include:

III. Costs for keeping clients and distributors informed

- the costs of drafting and distributing KIDs, prospectuses and regulatory reports;
- the costs of providing regulatory information to distributors:
- the costs of providing information to unitholders by all means;
- information specific to direct and indirect holders: 6: Letters to holders:
- website administration costs:
- translation costs specific to the subfund.

IV. Data costs

- costs of data used for redistribution to third parties;
- costs for auditing and promoting labels (e.g. SRI label, Greenfin label)

V. Depositary, legal, audit, tax fees, etc.

- statutory audit fees;
- depositary fees:
- fees for delegation of administrative and accounting management;
- tax-related fees including those of lawyers and external consultants (recovery of withholding tax on behalf of the fund, local tax agent, etc.);
- legal fees specific to the subfund;
- Costs of creating a new subfund, amortisable over 5 years.

VI. Costs relating to compliance with regulatory obligations and regulatory reporting

- fees for submitting regulatory reports to the regulator specific to the subfund;
- fees for compulsory professional associations

The following costs may be added to the above-listed fees charged to the subfund:

- contributions due for the management of the subfund pursuant to 4° of Article L. 621-5-3-II-4° of the French Monetary and Financial Code;
- exceptional and non-recurring taxes, levies and government duties (in relation to the subfund);
- exceptional and non-recurring costs for the recovery of receivables (e.g. Lehman) or proceedings to assert a right (e.g. class action).

Swing pricing

The management company has implemented a swing pricing mechanism to adjust the net asset value of each of the subfunds once a trigger threshold is reached in order to protect the interests of the unitholders present in each of the subfunds.

Under this mechanism, investors bear the portfolio adjustment costs — including transaction fees, bid/offer spreads and taxes or fees applicable to the UCI — relating to investments or disinvestments when there are significant numbers of subscriptions and redemptions.

When the net balance of investor subscription and redemption orders exceeds a predefined threshold, called the "trigger point", the NAV is adjusted.

The NAV is adjusted up or down if the balance of subscriptions- redemptions is respectively positive or negative, so as to take into account the readjustment costs attributable to the net subscription and/or redemption orders.

^{***}The subfund invests less than 20% in UCIs

The trigger threshold is expressed as a percentage of the subfund's net assets.

The parameters for the trigger point and the NAV adjustment factor are determined by the Management Company and periodically reviewed.

The adjusted ("swung") NAV is the subfund's only NAV and is therefore the only NAV published and communicated to unitholders.

By applying swing pricing with a trigger threshold, it is possible that the UCI's volatility will not come from only the volatility of the financial instruments in the portfolio.

In accordance with the regulatory provisions, the management company does not communicate the trigger points and ensures that internal communication channels are restricted so as to safeguard the confidential nature of the information.

Appropriation of distributable amounts

Definition of distributable amounts

Distributable amounts consist of the following:

Income:

Net revenue plus retained earnings and plus or minus the balance of the accrued income account.

Gains and losses:

Capital gains realised, net of costs, minus realised losses, net of costs, recognised during the fiscal year, plus net gains of the same type recognised in previous fiscal years that were not distributed or accumulated, plus or minus the balance of accrued gains.

The amounts referred to as "income" and "gains and losses" may be distributed, in whole or in part, independently of each other.

Distributable sums are paid within a maximum period of five months following the end of the financial vear.

Where the UCI is authorised under Regulation (EU) No. 2017/1131 of the European Parliament and of the Council of 14 June 2017 on money market funds, by way of derogation from the provisions of I, distributable sums may also include unrealised gains.

nnual Report as at 31/13/2024

C1g. Exposure of transactions involving a counterparty

Counterparties (amounts in thousands of EUR)	Present value constituting a receivable	Present value constituting a debt
Transactions on the assets side of the balance sheet		
Deposits		
Unsettled forward financial instruments		
Receivables representing financial instruments received under repurchase agreements		
Receivables representing securities given as collateral		
Receivables representing lent financial securities		
Borrowed financial securities		
Securities received as collateral		
Financial securities sold under repurchase agreements		
Receivables		
Cash collateral		
Cash security deposit paid		
Transactions on the liabilities side of the balance sheet		
Payables representing securities in repurchase and reverse agreements		
Unsettled forward financial instruments		
Payables		
Cash collateral		

C2. Indirect exposures for multi-management UCIs

The fund under review is not concerned by this section.

C3. Exposure to private equity portfolios

For the UCI under review, the presentation of this section is not required by the accounting regulations.

C4. Exposure on loans for Specialised Financing Institutions

For the UCI under review, the presentation of this section is not required by the accounting regulations.

NOTES TO THE ANNUAL FINANCIAL STATEMENTS

1. Accounting policies

The annual financial statements are presented in the form prescribed by ANC regulation no. 2014-01, as amended.

General accounting principles are applied:

- true and fair view, comparability, going concern;
- accuracy, reliability;
- prudence;
- consistency of accounting methods from one period to the next.

The accrued interest method is used to recognise revenue from fixed income securities.

Purchases and sales of securities are booked excluding expenses.

The euro is the reference currency for the portfolio's accounting.

The duration of the reporting period is 12 months.

Asset valuation rules

The asset valuation rules applied by the accounting manager are outlined below according to the instruments held by the subfund:

The subfund has adopted the euro as the reference currency.

The prices used for the valuation of securities traded on the stock exchange are the closing prices. The prices applied for the valuation of bonds are an average contributor. Funds are valued at their last known price.

Negotiable debt securities with a residual life of more than three months are valued at the market rate, with the exception of variable-rate or adjustable-rate negotiable debt securities not presenting any particular market sensitivity.

A simplified method known as "linearisation" is applied for negotiable debt instruments whose residual lifespan is less than three months with no particular sensitivity to the market on the basis of the crystallised three-month rate.

Repurchase agreements are valued at the contract price.

Firm and optional forward transactions and swap transactions made on OTC markets and authorised under the applicable fund regulations are measured at their market value or at an estimated value using methods chosen by the management company. Interest rate and/or currency swaps are valued at their market value based on the price calculated by discounting future cash flows (principal and interest) at the prevailing market interest and/or exchange rates.

European and foreign futures are valued using their settlement prices.

Interest rate and foreign currency swaps are valued under market conditions.

The valuation of interest-rate swaps against share performance is carried out:

- under market conditions for the fixed income branch
- according to the underlying security rate for the equity branch.

The valuation of credit default swaps (CDS) stems from a model populated by market spreads.

Off-balance sheet commitments in European and foreign futures markets are calculated as follows:

- FUTURES

(Qty x Nominal x Daily price x Contract currency)

- OPTIONS

(Qty x delta) x (Nominal of underlying instrument x Daily price of underlying instrument x Contract currency).

For swaps, the off-balance-sheet commitment corresponds to the nominal value of the contract plus or minus the interest differential and the unrealised capital gain or loss on the closing date.

Transaction fees are recognised in specific accounts of each subfund and are not added to the price.

Financial instruments whose prices were not determined on the day of valuation or whose prices have been adjusted are valued at their probable trading price under the responsibility of the Management Company. These valuations and the associated justification are provided to the statutory auditor for auditing purposes.

Valuation of financial guarantees

Collateral is valued daily at the market price (mark to market).

Haircuts can be applied to collateral received in the form of securities according to the level of risk.

Margin calls occur daily unless otherwise indicated in the master agreement covering these transactions on in case of agreement between the management company and the counterparty on the application of a trigger point.

Financial management

Management fees and running costs cover all costs relating to the Fund for financial, administrative, and accounting management, custodianship, distribution, auditing, etc.

These fees are charged to the Fund's income statement.

Management fees do not include transaction fees. For more information on the costs actually billed to the fund, please see the prospectus.

They are recognised on a pro rata basis each time the net asset value is calculated.

The aggregate of these fees complies with the maximum fee rate as a percentage of the net assets given in the fund's prospectus or rules:

FR0011332733 - HSBC RESPONSIBLE INVESTMENT FUNDS - SRI EURO BOND AD share: Maximum fee rate of 0.80% including tax

FR0013287232 - HSBC RESPONSIBLE INVESTMENT FUNDS - SRI EURO BOND BC share: Maximum fee rate of 0.40% including tax

FR0013234937 - HSBC RESPONSIBLE INVESTMENT FUNDS - SRI EURO BOND IT share: Maximum fee rate of 0.40% including tax

FR0010489567 - HSBC RESPONSIBLE INVESTMENT FUNDS - SRI EURO BOND IC share: Maximum fee rate of 0.40% including tax

FR0010061283 - HSBC RESPONSIBLE INVESTMENT FUNDS - SRI EURO BOND AC share: Maximum fee rate of 0.80% including tax

Operating and other service charges are a maximum of 0.30% including tax for the IT share and a maximum of 0.20% including tax for the AC, AD, IC, BC and ZC shares.

Swing pricing

The management company has implemented a swing pricing mechanism to adjust the net asset value of each of the subfunds once a trigger threshold is reached in order to protect the interests of the unitholders present in each of the subfunds.

Under this mechanism, investors bear the portfolio adjustment costs — including transaction fees, bid/offer spreads and taxes or fees applicable to the UCI — relating to investments or disinvestments when there are significant numbers of subscriptions and redemptions.

When the net balance of investor subscription and redemption orders exceeds a predefined threshold, called the "trigger point", the NAV is adjusted.

The NAV is adjusted up or down if the balance of subscriptions/redemptions is respectively positive or negative, so as to take into account the readjustment costs attributable to the net subscription and/or redemption orders.

The trigger threshold is expressed as a percentage of the subfund's net assets.

The parameters for the trigger point and the NAV adjustment factor are determined by the Management Company and periodically reviewed.

The adjusted ("swung") NAV is the subfund's only NAV and is therefore the only NAV published and communicated to unitholders.

By applying swing pricing with a trigger threshold, it is possible that the UCI's volatility will not come from only the volatility of the financial instruments in the portfolio.

In accordance with the regulatory provisions, the management company does not communicate the trigger points and ensures that internal communication channels are restricted so as to safeguard the confidential nature of the information.

Appropriation of distributable amounts

Definition of distributable amounts

Distributable amounts consist of the following:

Income:

Net income for the financial year is equal to the amount of interest, arrears, premiums and bonuses, dividends, directors' fees and any other income relating to the securities that constitute the portfolio, plus income from temporary cash holdings, less management fees and borrowing costs.

Retained earnings are added to income and the balance of accrued income is added or subtracted as appropriate.

Gains and losses:

Capital gains realised, net of costs, minus realised losses, net of costs, recognised during the fiscal year, plus net gains of the same type recognised in previous fiscal years that were not distributed or accumulated, plus or minus the balance of accrued gains.

Appropriation of distributable amounts:

Share(s)	Appropriation of net income	Appropriation of net realised gains or losses
HSBC Responsible Investment Funds SRI Euro Bond AC share	Accumulated	Accumulated
HSBC Responsible Investment Funds SRI Euro Bond AD share	Distributed	Accumulation and/or distribution on the Management Company's decision each year
HSBC Responsible Investment Funds SRI Euro Bond BC share	Accumulated	Accumulated
HSBC Responsible Investment Funds SRI Euro Bond IC share	Accumulated	Accumulated
HSBC Responsible Investment Funds SRI Euro Bond ZC share	Accumulated	Accumulated

Periodic disclosures for financial products covered by Article 8, paragraphs 1, 2 and 2a of Regulation (EU)) 2019/2088 and by Article 6(1) of Regulation (EU) 2020/852

Sustainable investment

means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm either of these objectives and that the financial product's investee companies follow good governance practices.

The **EU** Taxonomy is a classification system laid down in Regulation (EU) 2020/852, establishing a list environmentally sustainable economic activities. This regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective are not necessarily aligned with the

Product name: HSBC RESPONSIBLE INVESTMENT FUNDS - SRI EURO BOND

Legal entity identifier: 9695002FAVK2RMMSQE25

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?			
●● □ Yes	● ✓ No		
It made sustainable investments with an environmental objective: _% in economic activities that qualify as environmentally sustainable under the EU Taxonomy	It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a minimum proportion of 30.66% sustainable investments		
in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	with an environmental objective and made in economic activities that qualify as environmentally sustainable under the EU Taxonomy		
	with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy		
	with a social objective		
It made sustainable investments with a social objective: _%	It promoted E/S characteristics but did not make any sustainable investments.		

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Sustainability indicators

Taxonomy.

measure how the environmental or social characteristics promoted by the financial product are attained.

The subfund promotes E, S and G characteristics by investing in euro-denominated bonds and debt securities across a universe of issues that meets socially responsible economic, environmental, social, and governance criteria.

For public or private listed corporate issues: the manager uses a best-in-class approach to select within each sector the companies that have the best ESG practices compared with their peers within each sector of the economy. For each ESG pillar, several criteria are used, including CO2 emissions for the E pillar, management of staff for the S pillar, and level of independence of directors for the G pillar.

For government issues (bonds): euro-denominated issuing countries are classified according to

their overall "ESG" rating, which is based 50% on the Environmental pillar (E) and 50% on the Social/Governance pillar (S/G). The Social and Governance pillar includes the analysis of the political and governance system, human rights and fundamental freedoms, and social conditions. The Environmental pillar includes the analysis of natural resources, climate change and energy, production, and sustainable consumption.

The manager uses an ESG Selection approach to select the countries with a minimum ESG rating according to the non-financial rating agency ISS-Oekom from among euro-denominated issuing countries.

In addition, the subfund will:

- Exclude issuers that have one or more confirmed breaches or at least two presumed breaches of one of the ten principles of the United Nations Global Compact or of the OECD Guidelines for Multinational Enterprises.
- Exclude securities of companies involved in the production of controversial weapons or their components. Controversial weapons include, but are not limited to, anti-personnel mines, depleted uranium weapons and white phosphorus when used for military purposes. This exclusion is in addition to the exclusion policy on weapons prohibited by international treaties.
- Exclude securities of companies in the Defence sector.
- Exclude securities of companies engaged in thermal coal activities. Companies that derive more than 10% of their revenue from electricity generated using thermal coal are partially excluded. Mining companies are completely excluded.
- Exclude securities of companies involved in tobacco production.
- Carefully consider environmental issues through engagement activities.

The subfund is actively managed and does not track a benchmark. The indicator used by the subfund to measure performance is the Bloomberg Capital Euro Aggregate 500MM. However, it has not been designated to determine whether the subfund is aligned with the environmental or social characteristics it promotes.

How did the sustainability indicators perform?

Indicator	Fund	Benchmark
ESG Score	6.86	6.67
E Pillar	7.20	6.43
S Pillar	6.56	6.72
G Pillar	6.80	6.89
3. GHG emissions intensity of beneficiary companies - tonnes of CO2 equivalent per million euros of revenue	90.10	76.80
10. Violations of the principles of the United Nations Global Compact and the OECD Guidelines for Multinational Enterprises	0.00%	0.00%
14. Exposure to companies involved in the production of controversial weapons or their components (anti-personnel mines, depleted uranium weapons, white phosphorus when used for military purposes)	0.00%	0.00%

The data in this report are as of 31 December 2024, based on the average of the positions at the end of each of the four quarters of the financial year ended 31 December 2024.

What were the objectives of the specific sustainable investments that the financial product intended to make and how did its sustainable investments help meet such objectives?

The subfund's sustainable investments are aligned with its environmental characteristics.

The identification and ESG analysis of companies are performed as part of the investment decision-making process to reduce sustainability risks and increase returns.

How did the specific sustainable investments that the financial product made not cause significant harm to any environmental or social sustainable investment objective?

The principle of "do no significant harm" to environmental or social objectives applies only to the underlying sustainable investments of the subfund. This principle is incorporated into the investment decision-making process, which includes consideration of principal adverse impacts.

How have the indicators for adverse impacts on sustainability factors been taken into account?

HSBC Asset Management's "do no significant harm" (DNSH) assessment of issuers as part of its sustainable investment process includes consideration of principal adverse impacts (PAI). It involves a holistic analysis of the company's multiple sustainability impacts rather than focusing on a single factor. When an issuer is identified as potentially controversial, it cannot be considered a sustainable investment. Thus, all relevant PAI are reviewed and integrated into the investment process using an approach that combines exclusions (sector-specific, most severe ESG controversies, and normative exclusions, etc.) with voting and shareholder engagement activities to instil and support a positive change dynamic within companies. Furthermore, a company will be considered unsustainable when it is not compliant with the Principles of the United Nations Global Compact and its associated international standards, conventions and treaties, or if it is involved in weapons banned by international conventions. With the exception of these last two PAIs, we use proxies. In our view, the setting of exclusion thresholds (e.g. GHG emissions) for each PAI is not always relevant and could compromise the fact that many sectors and companies are in a transition strategy. In addition, engagement is essential to ensure that companies with limited disclosure, particularly in emerging economies, are initially excluded from the definition of sustainable investment and allow us to be a catalyst for positive environmental or social change. For example, we use a 10% threshold on revenues from thermal coal mining (and coal-fired power generation) as an exclusion filter to indirectly address all PAIs related to greenhouse gas emissions. HSBC's sustainable investment methodology is available on the management company's website: www.assetmanagement.hsbc.fr/fr/retail-investors/about-us/responsible-investors/policies

Were the fund's sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

HSBC is committed to applying and promoting international standards. The ten principles of the United Nations Global Compact are among the priorities of HSBC's Responsible Investment Policy. These principles include non-financial risks such as human rights, labour standards, the environment, and anti-corruption. HSBC is also a signatory to the United Nations Principles for Responsible Investment. They provide a framework for the identification and management of sustainability risks. In this subfund, companies with a proven violation of one of the 10 principles of the United Nations Global Compact or at least two alleged violations are systematically excluded. Companies are also assessed according to international standards such as the OECD Guidelines for Multinational Enterprises.

Principal adverse impacts

are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social, and employee matters, respect for human rights, anti-corruption, and anti-bribery matters.

The EU Taxonomy sets out a "do no significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives, and is accompanied by criteria specific to the EU.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the European Union criteria for environmentally sustainable economic activities.

Any other sustainable investments must also do no significant harm to any environmental or social objectives.

How did this financial product take into consideration principal adverse impacts on sustainability factors?

The principal adverse impacts of investments are considered in the management of the subfund as follows:

- For the selection of investments, the manager has chosen an environmental indicator:
- "Greenhouse Gas Intensity". The subfund's consideration of this indicator stems from, in particular, the application of our coal phase-out policy. In addition, the manager favours companies with low CO2 emissions or companies working to reduce their carbon intensity.
- Exclusion of issuers:

Considered non-compliant with the principles of the United Nations Global Compact and the OECD Guidelines for Multinational Enterprises;

- Exposed to controversial weapons.
- Lastly, the subfund takes into consideration the principal adverse impacts in its engagement approach, which incorporates several levers for action including 1) direct dialogue with companies about their consideration of environmental and social issues to ensure that they are able to face the future and maintain long-term financial viability, 2) a gradual escalation procedure with companies when the ESG risks or controversies to which they are exposed are not managed. In practice, the Greenhouse Gas Intensity indicator is taken into consideration, in particular, through dialogue with companies to assess how their carbon neutrality transition plans take into account impacts on employees, supply chains, communities and consumers.

The list comprises the investments making up the largest proportion of the financial product's investments at: Average of the positions at the end of each of the four quarters of the reference period ended 31/12/2024

What were this financial product's largest investments?

Largest investments	Sector	% of assets Country

What was the proportion of sustainability-related investments?

The proportion of sustainable investments was 30.66%.

The management company's sustainable investment methodology is available in the section "SFDR" Appendix of Regulation (EU) 2019/2088 of the annual report.

What was the asset allocation?

The category **#1 Aligned** with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

The category **#2 Other** includes the remaining investments of the financial product that are neither aligned with the environmental or social characteristics nor are qualified as sustainable investments.

The asset allocation

describes the proportion of investments in specific assets.

The category #1 Aligned with E/S characteristics covers:

- the sub-category #1A Sustainable covering environmentally and socially sustainable investments,
- the sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments
- * A company or issuer that is considered a sustainable investment can contribute to both an environmental and a social objective that may or may not be aligned with the EU taxonomy. The figures in the chart above take this into account, but a company or issuer can only be counted once in category #1A Sustainable.

In which economic sectors were the investments made?

Sector / Sub-Sector	% of assets
Sovereign	41.61%
Financial	22.94%
Utilities	8.52%
Electricity	5.77%
Gas	1.28%
Diversified businesses	1.17%
Industry	7.09%
Telecommunications services	4.66%
Materials	2.91%
Real estate	2.91%
Consumer staples	2.10%
Consumer discretionary	2.05%
Health	1.60%
Other	1.43%
Energy	1.28%
Integrated Gas and Oil	0.90%
Oil and Gas Related Equipment and Services	0.38%
Information Technology	0.83%
Cash and derivatives	0.07%
Total	100.00%

To comply with the EU Taxonomy, the criteria applicable to natural gas include emission limits and switching to entirely renewable sources of electricity or to low-carbon fuel by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The proportion of sustainable investments aligned with the EU taxonomy is shown in the asset allocation table above.

•	Has the financial product invested in natural gas and/or nuclear energy generation activities that are compliant with the EU Taxonomy? 1
	☐ Yes:

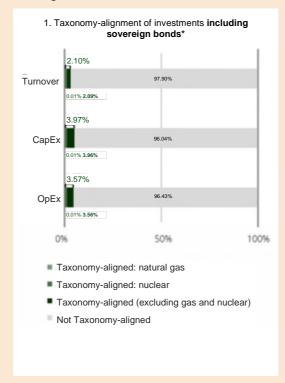

☐ Yes:		
	☐ In natural gas	☐ In nuclear energy
✓ No		

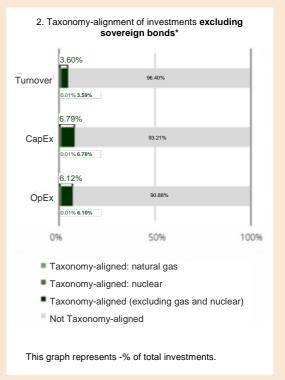

¹ Natural gas and/or nuclear energy generation activities only qualify as EU Taxonomy-eligible if they help mitigate climate change ("mitigation of climate change") and cause no significant harm to any of the EU Taxonomy objectives (see the explanatory note in the sidebar on the left). The set of criteria for natural gas and nuclear energy generation activities that are compliant with the EU Taxonomy are set out in Commission Delegated Regulation (EU) 2022/1214.

EU Taxonomyaligned activities are expressed as a percentage of:

- revenue to reflect the current ecological nature of investee companies;
- capital expenditure (CapEx) to show the green investments made by investee companies, relevant for a transition to a green economy;
- operational expenses (OpEx) reflecting green operational activities of investee companies.

The two graphs below show, in green, the percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

*For the purpose of these graphs, "sovereign bonds" include all sovereign exposures.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

This symbol denotes sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU's Taxonomy Regulation 2020/852.

What was the share of investments made in transitional and enabling activities?

During the reporting period, the proportion of investments made in transitional activities was 0.00% and the proportion of investments made in enabling activities was 2.44%.

How did the percentage of EU Taxonomy-aligned investments compare with previous reference periods?

Indicator	2023-24	2022-23	2021-22
Revenue - Taxonomy aligned: fossil gas	N/A	N/A	0.00%
Turnover - Taxonomy-aligned: nuclear	0.01%	N/A	0.00%

CapEx - Taxonomy-aligned (excluding gas and nuclear)	96.04%	96.72%	100.00%
CapEx - Taxonomy-aligned: natural gas	N/A	N/A	0.00%
OpEx - Taxonomy-aligned: nuclear	0.01%	N/A	0.00%
OpEx - Taxonomy-aligned (excluding gas and nuclear)	3.56%	2.92%	0.00%
OpEx - Not Taxonomy-aligned	96.43%	97.08%	100.00%

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

Sustainable investments with an environmental objective not aligned with the EU taxonomy accounted for 26.50%. The fund has not committed to investments aligned with the EU taxonomy.

What was the share of socially sustainable investments?

The subfund does not commit to having a minimum share of socially sustainable investments. However, when assessing issuers, the subfund manager does look at the social characteristics, respect for human rights and employee rights, management conduct, and corporate social responsibility of the companies.

What investments were included under "Other", what was their purpose and were they covered by any minimum environmental or social safeguards?

The subfund holds cash, derivatives, as well as investments for which no non-financial analysis could be performed due to the unavailability of ESG data. Derivatives are used for portfolio risk adjustment (exposure, hedging, arbitrage).

What actions have been taken to attain the environmental and/or social characteristics during the reference period?

Changes in the MSCI ratings of issuers in the eligible universe are systematically analysed, with the aim of improving the overall ESG score through portfolio rebalancing. Those whose rating has declined and who have moved into the fourth quartile of their sector are sold in favour of higher-rated issuers, while the number of issuers in the third quartile must remain limited to eight. The inclusion of non-financial factors such as the percentage of women in leadership positions or independent board members was added to the list of criteria in order to improve the S and G pillars.

How did this financial product perform compared with its benchmark?

The subfund is actively managed and does not track a benchmark. There is no benchmark representative of our management philosophy and therefore of our investment universe, nor has any index been designated to determine whether the subfund is aligned with the environmental or social characteristics that it promotes. The information requested in this section is therefore not applicable to this product.

Benchmarks are indexes used to gauge whether the financial product attains the environmental or social characteristics that it promotes.

- How does the benchmark differ from a broad market index? Not applicable
- How did this financial product perform with regard to the sustainability indicators designed to determine the benchmark's alignment with the environmental or social characteristics promoted?
 Not applicable
- How did this financial product perform compared with its benchmark?
 Not applicable
- How did this financial product perform compared with the broad market index?
 Not applicable

Subfund:

HSBC RESPONSIBLE INVESTMENT FUNDS - SRI MODERATE

Activity report

Equity market allocation:

Equity markets made significant progress in 2024 with a clear outperformance of US indices. This good performance can be explained by accommodative monetary policies, with a 1% cut in key rates by the Fed and 1.35% by the ECB and a further outperformance of US growth linked to AI, such as the seven main US technology and communication companies, which gained 67% in 2024 compared with 17% for the global index in local currencies.

We remained slightly underexposed at the beginning of the year in anticipation of a slowdown in activity, but we judiciously increased our exposure following more robust economic performance.

As of 31 December 2024, the equity exposure of HRIF - SRI Moderate was 30.1% of assets, slightly higher than that of its investment universe (30%).

Exposure on equity markets:

The equity segment consists mainly of physical securities and UCITS. This combination exposes the segment to various themes. In order to adjust the directional allocation, derivatives are used.

The management of the eurozone equity allocation follows our best-in-class SRI selection process, which aims to prioritise stocks for their good ESG practices. Added to this is an active fundamental approach based on an examination of the profitability/valuation profile, which favours stocks with an attractive valuation and profitability likely to improve significantly.

Over the period, sector allocation contributed positively to the subfund's relative performance. The positive contributions came from the overexposure to insurance and banking and the underweighting of consumer durables, energy and consumer staples. Negative contributions came from an overexposure to transport and utilities and an underweight position in capital goods.

Stock-picking contributed negatively to the fund's relative performance, notably our picks in semiconductors (STM), energy (Neste Q2 ESG), automotive (BMW) and capital goods (Kion, Siemens, Metso). Notable positive contributions came from Bawag and Erste in banking, Relx in business services, CRH and DSM in commodities and Iberdrola in utilities.

Overall, the eurozone equity allocation made a positive contribution in absolute terms and in line with its benchmark index.

International diversification is achieved by investing in the HRIF - SRI Global Equity subfund. This positioning was positive in terms of absolute performance but negative in terms of relative contribution due to the subfund's underperformance relative to its benchmark index.

As at 31 December 2024, we hold approximately 25.5% in direct securities and 5.6% in the HRIF -SRI Global Equity subfund.

We use futures on the Euro Stoxx 50 index to adjust the equity exposure. We have a short position of approximately -1% as at 31 December 2024.

Fixed income allocation:

In 2024, the interest rate markets went through three main phases up to the end of May, followed by a period of easing until the end of September and a phase of volatility marked by spikes in bond market tensions in the final quarter. We started the year with a lower sensitivity to government bonds than the benchmark index. We judiciously reduced this underexposure in early June. The normalisation of inflation and the accommodative bias of monetary policy in the eurozone are supporting factors in the medium term.

Exposure on bond markets:

SRI investment outside the eurozone is based on a systematic approach with a desire to maximise the ESG score under the constraint of Tracking Error. In practice, the selected securities belong to the first quartile of each sector. Geographical deviations are very modest.

Credit risk premiums tightened overall during the year and private credit outperformed government bonds. Our preference for private debt was beneficial to performance.

As of 31 December 2024, the bond allocation of the HRIF - SRI Moderate subfund was close to 66.8% compared with 70% for the investment universe.

Investments on the money market:

We use money market instruments tactically to hedge against rising volatility in equity and fixed income markets.

The allocation uses the following fund:

HSBC SRI Money

As of 31 December 2024, we held approximately 1.4%.

Performance

At the close of the year, the subfund posted performance of 4.18% for the AC share and 4.78% for the RC share. The IC share is inactive.

Past performance is not an indicator of the future results of the SICAV subfund.

Information on environmental, social, and governance (ESG) criteria

In accordance with Article L.533-22-1 of the French Monetary and Financial Code, the policy on considering environmental, social, and governance quality (ESG) criteria in the investment strategy is available on the management company's website at www.assetmanagement.hsbc.fr.

Further information on the inclusion of ESG criteria in the investment policy over the fiscal year

The transparency code for the subfund is available to the public www.assetmanagement.hsbc.fr and provides detailed information on the subfund's SRI approach.

"SFDR" Annex to Regulation (EU) 2019/2088 and its implementing technical standards

The subfund promotes environmental or social characteristics within under Article 8 of Regulation (EU) 2019/2088 of 27 November 2019 on sustainability-related disclosures in the financial services sector ("SFDR").

Information on environmental or social characteristics is available in the SFDR appendix of the annual report.

The management company's sustainable investment methodology is as follows:

Sustainable investment within the meaning of Article 2(17) of the European SFDR

The SFDR (EU Regulation 2019/2088 of the European Parliament and of the Council of 27 November 2019) on sustainability-related disclosures in the financial services sector comes into force in 2021, with the obligation for financial institutions to be transparent in their communication on sustainable investment strategies that incorporate environmental, social and governance (ESG) issues.

Under this regulation, as provided for in Article 2, point |17| of the SFDR, sustainable investment is defined as an investment that generates positive environmental and/or social outcomes. The challenge for asset managers has been to define and calculate the net positive contribution of companies to environmental and social issues, while ensuring that this positive contribution is not accompanied by negative impacts.

How is the sustainable contribution of issuers measured?

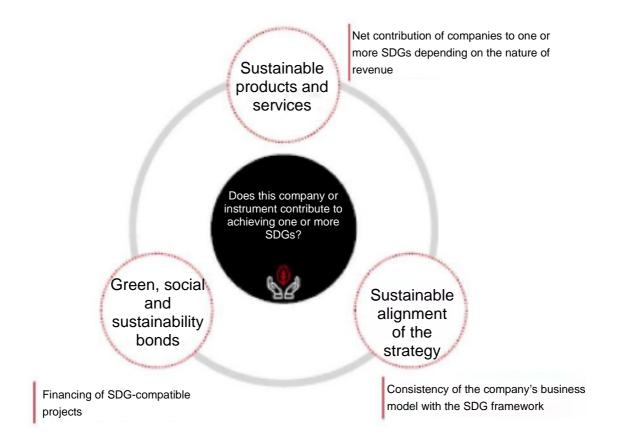

- We have developed a proprietary methodology to determine whether an instrument/issuer can be defined as a "sustainable investment" within the meaning of SFDR Article 2(17) and whether it can be taken into account in the calculation of the proportion of sustainable assets in portfolios.
- Since 2022, our methodology has evolved from seeking to align revenue with the United Nations Sustainable Development Goals (SDGs) to a broader approach that also incorporates the sustainable quality of issuers' business models, operations and sustainability strategies. This broadening of the scope of analysis better reflects the commitment and actions taken by companies to meet the challenges of sustainable development.
- Our assessment also includes a verification of the principle of Do No Significant Harm (DNSH) while taking good governance practices into account. This review takes into account the principle adverse impacts (PAI) in accordance with the SFDR. PAIs are a selection of environmental and social indicators to consider and report on, including greenhouse gas (GHG) emissions, carbon intensity and footprint, discharges and gender pay gaps.

Overview of the general investment process, which may differ depending on the product, the customer's mandate, or market conditions

Assessing the sustainable quality of an investment

Our methodology is based on the assessment of an investment's ability to contribute to the United Nations Sustainable Development Goals (SDGs) and has three dimensions¹:

An in-depth analysis is carried out on the basis of several external data sources, as well as internal analyses and research. These data sources include Sustainalytics, S&P Trucost and FTSE Green Revenue, as well as our proprietary databases on companies' green shares and their eligibility for the European taxonomy².

Based on sustainability thresholds defined for each of the analysed criteria (see details on page 3), issuers/instruments will be considered sustainable if they meet at least one of the three dimensions mentioned above.

Source: HSB Asset Management

Overview of the general investment process, which may differ depending on the product, the customer's mandate, or market conditions

405

⁽¹⁾ These three dimensions and their respective thresholds or indicators may be subject to change over time, without notice, depending on, for example, regulatory changes or clarifications, data availability, technological progress, etc. The parameters are as of the date indicated.

⁽²⁾ The European taxonomy refers to the classification of economic activities with a positive impact on the environment. Its objective is to direct investments towards sustainable – i.e. "green" – activities. https://finance.ec.europa.eu/sustainable-finance/tools-and-standards/eu-taxonomy-sustainable-activities en

The three dimensions of sustainability¹

3

To what extent does an investment contribute to one or more of the 17 SDGs?

Sustainable products and services

Current or expected sustainable net revenue in 3-5 years >=30%

Measure of the percentage of sustainable net revenue aligned with one or more of the 17 SDGs = measure of current or future revenue aligned with at least one of the SDGs (CAPEX², OPEX³ or EBITDA⁴), minus non-sustainable products and services, tobacco, thermal coal, prohibited weapons, the most severe environmental, social and governance (ESG) controversies, etc.

Quantitative score

Sustainable alignment of the strategy

Business models

Sustainable assessment of the business model: >=50% of the assessment questionnaire responses must obtain the highest score.

Assessing the sustainable quality of a company's business model integrates its operations and value chain, its sustainable development strategy and the management of the impacts of its activities on its environment and on communities. The positive contribution is identified based on alignment with the SDGs⁵.

Proven & verified (SMART⁵)

Sustainable theme

Thematic revenue of the company >=20%

or Assessment of the sustainable theme >=30%

These thresholds are tailored to emerging sustainable themes in industries that are still growing and/or fragmented, such as the circular economy.

Ambitions and practices

Progress made by the company in implementing its growth strategy verified on the basis of relevant indicators established by competent market bodies, for example credible carbon emission reduction targets approved by the Science Based Targets initiative (SBTi⁶).

Energy transition pathway

Assessment of activities that contribute to the energy transition based on the identification of the green share of the company's products and services (as a percentage of revenue) that makes it possible to finance the energy transition and the transition to renewable energies.

A company is considered a "sustainable transition asset" based on the intensity of its green share and criteria aligned with the Towards Sustainability label⁷ for the traditional energy (Oil & Gas) and power generation sectors.

Green, social and sustainability bonds

Use of bond issue proceeds in a sustainable business

For fixed income instruments, we view green, social and sustainability bonds as sustainable investments due to their clear and direct contribution to environmental and social goals. Green, social and sustainable bond instruments, as defined by the International Capital Market Association ("ICMA")⁸ and structures in accordance with its principles or guidelines, contribute, by their very design, to achieving environmental and/or social objectives aligned with the SDGs.

Source: HSB Asset Management

Overview of the general investment process, which may differ depending on the product, the customer's mandate, or market conditions

¹ These three dimensions and their respective thresholds or indicators may be subject to change over time, depending on, for example, regulatory changes or clarifications, data availability, technological progress, etc.

² Capital expenditure or CÁPEX, representing the capital invested for a company to acquire or modernise fixed, physical or non-consumable assets. Investment expenditures are primarily one-time investments in non-consumable assets used to maintain the existing operating levels within a company and to promote its future growth. Investment expenses server to buy or invest in tangible assets, such as real estate assets, raw materials, factories, buildings and equipment, which benefit the company beyond a single fiscal year. Intangible and non-physical assets, such as patents and licences, may also be considered as capital expenditure.

Operating expenses, or OPEX, include green costs, overheads and administrative costs, which are costs incurred as part of the main activities of the company, or overheads.
 EBITDA (earnings before interest, taxes, depreciation and amortisation) is another measure of a company's profitability other than net profit. By eliminating

[&]quot;EBITDA (earnings before interest, taxes, depreciation and amortisation) is another measure of a company's profitability other than net profit. By eliminating non-cash depreciation charges, as well as taxes and debt costs dependent on the capital structure, EBITDA attempts to represent the cash profit generated by the company's activities.

⁵ Specific, measurable, achievable, realistic and time-bound

⁶ Science-based targets provide companies with a clear path to reduce their greenhouse gas emissions, thereby helping to prevent the worst effects of climate change and preparing businesses for future growth. The targets are considered "science-based" if they are aligned with what the latest climate science deems necessary to meet the goals of the Paris Agreement, namely limiting global warming to 1.5°C above pre-industrial levels.

^{*} mww.icmagroup.org/assets/documents/Sustainable-finance/2022-updates/Mapping-SDGs-to-GSS-Bonds_June-2022-28062022.pdf

Do no significant harm principle

4

Our methodology verifies the absence of significant harm (DNSH) while taking good governance practices into account.

Our sustainable investments meet the requirements of the DNSH principle as defined by the SFDR (article 2(17) to the extent that they apply our exclusion policy detailed below:

DNSH principle – exclusions

For corporate bonds:

- Controversial and banned weapons score ²
- Revenue from tobacco production > 0%³
- Revenue from coal mining > 10%³
- Revenue from energy production via thermal coal > 10%³
- Non-compliance with the United Nations Global Compact ^{3,4}
- Reporting of the most serious controversies³

For government bonds:

- Reporting a breach with regard to a social issue³
- Any country on the HSBC sanctions list

The DNSH principle is examined in the same way as the good governance of the companies held in the portfolio, which forms the basis of our fundamental analysis and investment process.

Assessment of governance practices

- Our reflection process goes beyond governance scores and ESG scores. The quality of governance is assessed
 on the basis of criteria specified in the investment process, including ethics, corporate culture and values,
 governance structure and corruption.
- We determine the materiality of governance through an analysis of the governance structure, controversies, compliance with the principles of the UN Global Compact and the OECD guidelines for multinational companies.
- At a minimum, we exclude the most severe controversies for our actively managed funds.

Overview of the general investment process, which may differ depending on the product, the customer's mandate, or market conditions

⁽¹⁾ At end-December 2022.

⁽²⁾ The data comes in particular from ISS-Ethix

⁽²⁾ The data comes in particular from Sustainalytics. Examples of controversies: activities related to child labour, major environmental damage, corruption, pollution, etc.

⁽³⁾ The United Nations Global Compact is a voluntary initiative based on the commitment of companies to implement universal principles of sustainable development and build partnerships to support the United Nations goal: https://unglobalcompact.org/.

Spotlight on the Sustainable Development Goals

5

The 2030 Sustainable Development Agenda, adopted by all member states of the United Nations, establishes a common plan for peace and prosperity for people and the planet, now and in the future.

At the heart of this agenda are the 17 SDGs, which call for action by all countries – both developed and developing – under a global partnership.

These goals were designed with the understanding that eradicating poverty and other deprivation must go hand in hand with strategies to improve health and education, reduce inequalities and stimulate economic growth, tackle climate change and work to preserve our oceans and forests.

For more information, please visit https://sdgs.un.org/goals.

Additional information relating to Shareholder Rights Directive II (SRD2)

Contribution to medium- and long-term performance

The deployed management strategy is active and disciplined. As a Multi-Asset manager, we focus on allocation decisions based on the HSBC Group's expertise for decisions in selecting securities. Decisions concerning shares in particular will attach importance to the financial criteria of valuation and profitability but also to non-financial criteria (environmental, social, and governance).

For allocation decisions, we assess investment opportunities within and between asset classes according to a multi-factor approach. In particular, the criteria of valuation, carry, and price dynamics are taken into account and evaluated in the light of the economic environment. Other criteria may also be incorporated on specific asset classes. The various sources of performance thus detected are combined to obtain a well-balanced distribution of active risk in the portfolio. These elements are likely to achieve the long-term objectives of outperforming the subfund's benchmark.

• Main significant risks

The subfund incurs primary and secondary risks, which are listed in the subfund's prospectus.

Turnover rate

Portfolio turnover rate: 16.00%

The SEC method is used to calculate the turnover rate: Annual TO = Min (Purchase of securities; Sale of securities) / Average AUM

Management of conflicts of interest

During the past fiscal year, there were no conflicts of interest related to engagement activities.

During this period, the management company decided to use a voting advisor, Institutional Shareholder Services (ISS), for engagement activities.

Securities lending

The management company did not engage in securities lending during the past fiscal year.

Information about investment decisions

Investment decisions are based on fundamental analysis of the companies included in the investment universe. Markets are not always efficient and do not always reflect the intrinsic value of companies.

In this context, investment decisions are based on long-term fundamental analysis, thus enabling us to take advantage of these opportunities arising from the excessive volatility of financial markets.

The management processes are based on exploiting the data from the fundamental analysis conducted by our independent research teams, whether in the short, medium, or long term. Furthermore, regardless of the asset class, the consideration of Environmental, Social, and Governance risks and opportunities (E.S.G. integration) is an integral part of the security selection process of the manager of the subfunds concerned with the objective of long-term outperformance.

Incidents affecting the subfund during the fiscal year and forthcoming

4 June 2024

Update of regulatory documentation with the following changes:

- ✓ Update of recurring costs and performance scenarios in the Key Information Documents (KID)
- Standardisation of the drafting of KIDs (covered by Article 8 of the SFDR and AMF category 1 "central communication") following the recommendations issued by the French Financial Markets Authority (AMF) as part of its SPOT control relating to compliance with asset management companies' contractual non-financial commitments.
- ✓ Information on the HSBC Group's responsible investment policies (coal policy and energy policy) has been specified in the prospectus and the SFDR appendix.

> 1 January 2025

Update of regulatory documentation resulting from changes made to the SRI label framework and other changes.

Following the entry into force on 1 March 2024 of the new SRI Label reference framework applicable to French UCIs, the management of the subfunds that retain the label will change to adapt to the additional requirements of the SRI label set out below:

- 1- strengthen the requirements for selecting securities assets in the labelled subfund:
 - a) the market capitalisation weighted average ESG rating must be higher than the average ESG rating of the benchmark used for information purposes. In practice, the ESG rating that the subfund must outperform is calculated by removing the 30% worst stocks, based on exclusion criteria and the ESG rating. The "Best in class" approach has been abandoned in favour of the rating improvement approach.
 - b) the weighing assigned to each ESG pillar in the overall ESG rating is equal to at least 20% and varies according to the specific characteristics of the company's business sector.
 - c) a strict exclusion framework exists for each of the three ESG pillars, with the implementation of minimum exclusion criteria.
 - d) requirements in terms of monitoring controversies, shareholder engagement and voting policies have been strengthened.

- 2- a) ensure that application of the dual materiality requirement within the meaning of the European SFDR regulation is made systematic in management of the labelled subfund.
- 2- b) ensure consistency between the extra-financial performance of the labelled subfund, its ESG objectives and the associated performance monitoring indicators: the labelled subfund will undertake to outperform its benchmark indicator used for information purposes on two indicators most closely related to its ESG objective: the greenhouse gas (GHG) intensity indicator and the absence of human rights policy indicator.
- 3- incorporate a climate policy into the management of the labelled subfund: in order to limit its impact on the climate, the labelled subfund will no longer be able to invest in companies whose new projects are the exploration, exploitation and refining of fossil fuels, whether conventional or non-conventional.

In addition, in accordance with the changes to the French Financial Markets Authority (AMF) introduced by the regulations dated 6 October 2022, "operating and other service charges" may be deducted based on actual costs (the existing method) or based on a predefined flat rate, in both cases up to the maximum rate provided for in the prospectus.

With effect from 1 January 2025, HSBC Global Asset Management (France) has decided to deduct operating and other service charges based on a predefined flat rate.

The flat rate mentioned in the SICAV's prospectus will therefore be deducted even if the actual costs are lower than this rate. Conversely, if the actual costs are higher than the stated rate, the amount in excess of that flat rate will be borne by the management company.

Lastly, the wording of the following paragraphs of the prospectus will be updated:

- ✓ Restrictions on the issuance and redemption of units for US Persons
- ✓ Restrictions on the issuance and redemption of units for Canada residents
- ✓ Provisional measures prohibiting subscriptions to the fund from 12 April 2022.

Information relating to efficient portfolio management techniques and derivatives used by the subfund of the SICAV, pursuant to AMF position No. 2013-06

Efficient portfolio management techniques

As of the close of the fiscal year, the subfund of the SICAV did not use efficient portfolio management techniques.

Derivatives

As of the close of the fiscal year, the subfund of the SICAV did not use derivatives.

Aggregate exposure

The commitment method is used to calculate the aggregate exposure on financial futures.

A1. Characteristics and activity of the open-ended UCI

A1a. Investment strategy and profile

The investment objective of the HSBC Responsible Investment Funds – SRI Moderate subfund is to maximise a performance corresponding to an investment with a moderate exposure to equity market risk over a recommended investment period of at least 3 years. This investment is made by selecting securities of companies or countries selected for their good environmental, social, and governance (ESG) practices and their financial quality. The long-term strategic allocation is composed of 30% equities and 70% international bonds with a euro bias.

The UCI's prospectus provides a full and accurate description of these characteristics.

A1b. Characteristics of the UCI over the last 5 financial years

	31/12/2020	31/12/2021	30/12/2022	29/12/2023	31/12/2024

Accumulation per unit on revenue	13.16	12.38	11.91	13.78	16.68

A2. Accounting policies

The annual financial statements are presented for the first time in the form prescribed by ANC regulation 2020-07, as amended by ANC regulation 2022-03.

1 Changes in accounting methods, including presentation, in connection with the application of the new accounting regulation relating to the annual financial statements of undertakings for collective investment with variable capital (ANC regulation 2020-07 as amended)

This new regulation imposes changes in accounting methods, including changes in the presentation of annual financial statements. Comparability with the financial statements for the previous financial vear cannot therefore be achieved.

NB: the statements concerned are (in addition to the balance sheet and the income statement): B1. Change in equity and financing liabilities; D5a. Allocation of distributable amounts relating to net income and D5b. Allocation of distributable amounts relating to net realised gains and losses.

Thus, in accordance with the second paragraph of Article 3 of ANC Regulation 2020-07, the financial statements do not present data from the previous financial year; the previous year's financial statements are included in the notes to the financial statements.

These changes mainly concern:

- the balance sheet structure, which is now presented by types of eligible assets and liabilities, including loans and borrowings;
- the structure of the income statement, which is extensively modified; the income statement includes in particular: exchange rate differences on financial accounts, unrealised gains and losses, realised gains and losses, and transaction fees;
- the removal of the off-balance sheet table (part of the information on the items in this table is now included in the notes);
- the removal of the option to recognise costs included in the cost price (without retroactive effect for funds previously applying the included costs method);
- the distinction between convertible bonds and other bonds, as well as their respective accounting records;
- a new classification of target funds held in the portfolio according to the model: UCITS / AIF / Other;
- the recognition of forward foreign exchange commitments, which is no longer done on the balance sheet but off-balance sheet, with information on forward foreign exchange contracts covering a specific portion;
- the addition of information relating to direct and indirect exposures to the various markets;
- the presentation of the inventory, which now distinguishes eligible assets and liabilities from forward financial instruments;
- the adoption of a single presentation model for all types of UCI;
- the removal of account aggregation for funds with subfunds.

2 Accounting rules and methods applied during the financial year

General accounting principles apply (subject to the changes described above):

- true and fair view, comparability, going concern;
- accuracy, reliability:
- prudence;
- consistency of accounting methods from one period to the next.

The interest cash basis is used to recognise revenue from fixed-income securities.

Purchases and sales of securities are booked excluding expenses.

The euro is the reference currency for the portfolio's accounting.

The duration of the reporting period is 12 months.

Asset valuation rules

The asset valuation rules applied by the accounting manager are outlined below according to the instruments held by the subfund:

The subfund has adopted the euro as the reference currency.

The prices used for the valuation of securities traded on the stock exchange are the closing prices.

The prices applied for the valuation of bonds are an average contributor.

Funds are valued at their last known price.

Negotiable debt securities with a residual life of more than three months are valued at the market rate, with the exception of variable-rate or adjustable-rate negotiable debt securities not presenting any particular market sensitivity.

A simplified method known as "linearisation" is applied for negotiable debt instruments whose residual lifespan is less than three months with no particular sensitivity to the market on the basis of the crystallised three-month rate.

Repurchase agreements are valued at the contract price.

Firm and optional forward transactions and swap transactions made on OTC markets and authorised under the applicable fund regulations are measured at their market value or at an estimated value using methods chosen by the management company. Interest rate and/or currency swaps are valued at their market value based on the price calculated by discounting future cash flows (principal and interest) at the prevailing market interest and/or exchange rates.

European and foreign futures are valued using their settlement prices. Interest rate and foreign currency swaps are valued under market conditions.

The valuation of interest-rate swaps against share performance is carried out:

- under market conditions for the fixed income branch
- according to the underlying security rate for the equity branch.

The valuation of Credit Default Swaps (CDS) stems from a model used by the spreads market.

Off-balance sheet commitments in European and foreign futures markets are calculated as follows:

- FUTURES

(Qty x Nominal x Daily price x Contract currency)

- OPTIONS

(Qty x delta) x (Nominal of underlying instrument x Daily price of underlying instrument x Contract currency).

For swaps, the off-balance-sheet commitment corresponds to the nominal value of the contract plus or minus the interest differential and the unrealised capital gain or loss on the closing date.

Transaction fees are recognised in specific accounts of each subfund and are not added to the price.

Financial instruments whose prices were not determined on the day of valuation or whose prices have been adjusted are valued at their probable trading price under the responsibility of the Management Company. These valuations and the associated justification are provided to the statutory auditor for auditing purposes.

Valuation of financial guarantees

Collateral is valued daily at the market price (mark to market).

Haircuts can be applied to collateral received in the form of securities according to the level of risk.

Margin calls occur daily unless otherwise indicated in the master agreement covering these transactions on in case of agreement between the Management Company and the counterparty on the application of a trigger threshold.

Direct exposure to credit markets: principles and rules used to break down the components of the UCI's portfolio (table C1f.):

All elements of the UCI's portfolio exposed directly to the credit markets are shown in this table. For each item, the various ratings are retrieved: issue and/or issuer rating, long-term and/or short-term rating.

These ratings are retrieved from three rating agencies.

The rules for determining the rating used are then:

1st level: if there is a rating for the issue, it is used to the detriment of the issuer's rating

2nd level: the lowest long-term rating is selected from among those available from the three rating agencies

If there is no long-term rating, the lowest short-term rating is used among those available from the three rating agencies

If no rating is available, the item will be considered as "Unrated".

Lastly, according to the rating selected, the item is categorised according to market standards defining the concepts of "Investment Grade" and "Non-Investment Grade".

Financial management

Financial management fees and administrative fees external to the management company cover all fees charged directly to the subfund, with the exception of transaction fees. Transaction fees include intermediation fees (brokerage, stock exchange taxes, etc.) and activity fees, where applicable, which may be collected in particular by the depositary and the management company.

The following fees may be payable in addition to financial management fees and costs of administrative services external to the management company:

- performance commissions. These commissions are paid to the management company when the subfund has exceeded its targets. They are therefore charged to the subfund;
- activity fees charged to the subfund;
- a share of the income from temporary purchases and sales of securities.

In the event of an increase in administrative fees external to the management company equal to or less than 0.10% including tax per year, the subfund's shareholders may be informed by any means. In that case, the management company will not be required to notify the shareholders in any particular way or offer the option to redeem their shares free of charge.

	Fees charged to the subfund	Base	AC shares	IC shares	RC shares:
1	Financial management fees (*)	Daily net assets	Maximum 1.00% incl. tax	Maximum 0.50% incl. tax	Maximum 0.50% incl. tax
2	Operating and other and other services(**)	Daily net assets	Maximum 0.20% incl. tax.		tax.
3	Maximum indirect costs (Management commissions and fees)	Daily net assets	Immaterial(***)		
4	Transaction fees	Deducted from each transaction	None		
5	Outperformance fee	Daily net assets	None		

^{*} A percentage of management fees may be passed on to third-party marketing agents in return for marketing the subfund

I. Fund registration and listing fees:

- fees related to the subfund's registration in other Member States (including fees charged by advisors (lawyers, consultants, etc.) for carrying out marketing formalities with the local regulator on the asset management company's behalf);
- fees for listing the subfund and publishing net asset values to keep investors informed:
- distribution platform fees (excluding retrocessions), relating to agents in foreign countries that perform a distribution function

II. Costs for keeping clients and distributors informed

- the costs of drafting and distributing KIDs, prospectuses and regulatory reports;
- the costs of providing regulatory information to distributors;
- the costs of providing information to unitholders by all means;
- information specific to direct and indirect holders; 9: Letters to holders;
- website administration costs;
- translation costs specific to the subfund.

^{**} Operating and other service charges include:

III. Data costs

- costs of data used for redistribution to third parties;
- -- costs for auditing and promoting labels (e.g. SRI label, Greenfin label)
- IV. Depositary, legal, audit, tax fees, etc.
- statutory audit fees;
- depositary fees;
- fees for delegation of administrative and accounting management;
- tax-related fees including those of lawyers and external consultants (recovery of withholding tax on behalf of the fund, local tax agent, etc.);
- legal fees specific to the subfund;
- Costs of creating a new subfund, amortisable over 5 years.
- V. Costs relating to compliance with regulatory obligations and regulatory reporting
- costs for submitting regulatory reports to the regulator specific to the subfund;
- fees for compulsory professional associations
- operating charges for deployment of voting policies at General Meetings

The following costs may be added to the above-listed fees charged to the subfund:

- contributions due for the management of the subfund pursuant to Article L. 621-5-3-II-4°of the French Monetary and Financial Code;
- exceptional and non-recurring taxes, levies and government duties (in relation to the subfund);
- exceptional and non-recurring costs for the recovery of receivables (e.g. Lehman) or proceedings to assert a right (e.g. class action).

Swing pricing

The management company has implemented a swing pricing mechanism to adjust the net asset value of each of the subfunds once a trigger threshold is reached in order to protect the interests of the unitholders present in each of the subfunds.

Under this mechanism, investors bear the portfolio adjustment costs — including transaction fees, bid/offer spreads and taxes or fees applicable to the UCI — relating to investments or disinvestments when there are significant numbers of subscriptions and redemptions.

When the net balance of investor subscription and redemption orders exceeds a predefined threshold, called the "trigger point", the NAV is adjusted.

The NAV is adjusted up or down if the balance of subscriptions/redemptions is respectively positive or negative, so as to take into account the readjustment costs attributable to the net subscription and/or redemption orders.

The trigger threshold is expressed as a percentage of the subfund's net assets.

The parameters for the trigger point and the NAV adjustment factor are determined by the Management Company and periodically reviewed.

The adjusted ("swung") NAV is the subfund's only NAV and is therefore the only NAV published and communicated to unitholders.

By applying swing pricing with a trigger threshold, it is possible that the UCI's volatility will not come from only the volatility of the financial instruments in the portfolio.

^{***}The subfund invests less than 20% in UCIs

In accordance with the regulatory provisions, the management company does not communicate the trigger points and ensures that internal communication channels are restricted so as to safeguard the confidential nature of the information.

Appropriation of distributable amounts

Definition of distributable amounts

Distributable amounts consist of the following:

Income:

Net revenue plus retained earnings and plus or minus the balance of the accrued income account.

Gains and losses:

Capital gains realised, net of costs, minus realised losses, net of costs, recognised during the fiscal year, plus net gains of the same type recognised in previous fiscal years that were not distributed or accumulated, plus or minus the balance of accrued gains.

The amounts referred to as "income" and "gains and losses" may be distributed, in whole or in part. independently of each other.

Distributable sums are paid within a maximum period of five months following the end of the financial year.

Where the UCI is authorised under Regulation (EU) No. 2017/1131 of the European Parliament and of the Council of 14 June 2017 on money market funds, by way of derogation from the provisions of I, distributable sums may also include unrealised gains.

Appropriation of distributable amounts:

NOTES TO THE ANNUAL FINANCIAL STATEMENTS

1. Accounting policies

The annual financial statements are presented in the form prescribed by ANC regulation no. 2014-01, as amended.

General accounting principles are applied:

- true and fair view, comparability, going concern;
- accuracy, reliability;
- prudence;
- consistency of accounting methods from one period to the next.

The interest cash basis is used to recognise revenue from fixed-income securities.

Purchases and sales of securities are booked excluding expenses.

The euro is the reference currency for the portfolio's accounting.

The duration of the reporting period is 12 months.

Asset valuation rules

The asset valuation rules applied by the accounting manager are outlined below according to the instruments held by the subfund:

The subfund has adopted the euro as the reference currency.

The prices used for the valuation of securities traded on the stock exchange are the closing prices.

The prices applied for the valuation of bonds are an average contributor. Funds are valued at their last known price.

Negotiable debt securities with a residual life of more than three months are valued at the market rate, with the exception of variable-rate or adjustable-rate negotiable debt securities not presenting any particular market sensitivity.

A simplified method known as "linearisation" is applied for negotiable debt instruments whose residual lifespan is less than three months with no particular sensitivity to the market on the basis of the crystallised three-month rate.

Repurchase agreements are valued at the contract price.

Firm and optional forward transactions and swap transactions made on OTC markets and authorised under the applicable fund regulations are measured at their market value or at an estimated value using methods chosen by the management company. Interest rate and/or currency swaps are valued at their market value based on the price calculated by discounting future cash flows (principal and interest) at the prevailing market interest and/or exchange rates.

European and foreign futures are valued using their settlement prices.

Interest rate and foreign currency swaps are valued under market conditions.

The valuation of interest-rate swaps against share performance is carried out:

- under market conditions for the fixed income branch
- according to the underlying security rate for the equity branch.

The valuation of credit default swaps (CDS) stems from a model populated by market spreads.

Off-balance sheet commitments in European and foreign futures markets are calculated as follows:

- FUTURES

(Qty x Nominal x Daily price x Contract currency)

- OPTIONS

(Qty x delta) x (Nominal of underlying instrument x Daily price of underlying instrument x Contract currency).

For swaps, the off-balance-sheet commitment corresponds to the nominal value of the contract plus or minus the interest differential and the unrealised capital gain or loss on the closing date.

Transaction fees are recognised in specific accounts of each subfund and are not added to the price.

Financial instruments whose prices were not determined on the day of valuation or whose prices have been adjusted are valued at their probable trading price under the responsibility of the Management Company. These valuations and the associated justification are provided to the statutory auditor for auditing purposes.

Valuation of financial guarantees

Collateral is valued daily at the market price (mark to market).

Haircuts can be applied to collateral received in the form of securities according to the level of risk.

Margin calls occur daily unless otherwise indicated in the master agreement covering these transactions on in case of agreement between the Management Company and the counterparty on the application of a trigger threshold.

Financial management

Management fees and running costs cover all costs relating to the Fund for financial, administrative, and accounting management, custodianship, distribution, auditing, etc.

These fees are charged to the Fund's income statement.

Management fees do not include transaction fees. For more information on the costs actually billed to the fund, please see the prospectus.

They are recognised on a pro rata basis each time the net asset value is calculated.

The aggregate of these fees complies with the maximum fee rate as a percentage of the net assets given in the fund's prospectus or rules:

FR0013443157 - HSBC RESPONSIBLE INVESTMENT FUNDS - SRI MODERATE RC share: Maximum fee rate of 0.50% including tax

FR0013443132 - HSBC RESPONSIBLE INVESTMENT FUNDS - SRI MODERATE AC share: Maximum fee rate of 1% including tax

Operating charges and other services are a maximum of 0.20% including tax for all shares.

The maximum indirect charges (commissions and management fees) are not significant.

Swing pricing

The management company has implemented a swing pricing mechanism to adjust the net asset value of each of the subfunds once a trigger threshold is reached in order to protect the interests of the unitholders present in each of the subfunds.

Under this mechanism, investors bear the portfolio adjustment costs — including transaction fees, bid/offer spreads and taxes or fees applicable to the UCI — relating to investments or disinvestments when there are significant numbers of subscriptions and redemptions.

When the net balance of investor subscription and redemption orders exceeds a predefined threshold, called the "trigger point", the NAV is adjusted.

The NAV is adjusted up or down if the balance of subscriptions/redemptions is respectively positive or negative, so as to take into account the readjustment costs attributable to the net subscription and/or redemption orders.

The trigger threshold is expressed as a percentage of the subfund's net assets.

The parameters for the trigger point and the NAV adjustment factor are determined by the Management Company and periodically reviewed.

The adjusted ("swung") NAV is the subfund's only NAV and is therefore the only NAV published and communicated to unitholders.

By applying swing pricing with a trigger threshold, it is possible that the UCI's volatility will not come from only the volatility of the financial instruments in the portfolio.

In accordance with the regulatory provisions, the management company does not communicate the trigger points and ensures that internal communication channels are restricted so as to safeguard the confidential nature of the information.

Appropriation of distributable amounts

Definition of distributable amounts

Distributable amounts consist of the following:

Income:

Net income for the financial year is equal to the amount of interest, arrears, premiums and bonuses, dividends, directors' fees and any other income relating to the securities that constitute the portfolio, plus income from temporary cash holdings, less management fees and borrowing costs.

Retained earnings are added to income and the balance of accrued income is added or subtracted as appropriate.

Gains and losses:

Capital gains realised, net of costs, minus realised losses, net of costs, recognised during the fiscal year, plus net gains of the same type recognised in previous fiscal years that were not distributed or accumulated, plus or minus the balance of accrued gains.

Appropriation of distributable amounts:

Share(s)	Appropriation of net income	Appropriation of net realised gains or losses
HSBC RESPONSIBLE INVESTMENT FUNDS - SRI MODERATE AC share	Accumulated	Accumulated
HSBC RESPONSIBLE INVESTMENT FUNDS - SRI MODERATE RC share	Accumulated	Accumulated

Sustainable investment

means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm either of these objectives and that the financial product's investee companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852, establishing a list environmentally sustainable economic activities. This regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective are not

necessarily aligned with the Taxonomy.

Product name: HSBC RESPONSIBLE INVESTMENT FUNDS - SRI MODERATE

Legal entity identifier: 969500Q7HGCE44XGR189

Environmental and/or social characteristics

		ade sustainable investments a social objective: _%		d	id n	omoted E/S characteristics but not make any sustainable stments.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Sustainability indicators measure how the environmental or social characteristics

The subfund promotes E, S and G characteristics by investing in international equity and fixed-income markets with a euro bias by selecting securities issued by companies or countries in a universe of issues that meet Environmental, Social and Governance (ESG) criteria. The subfund is invested, at its manager's discretion, either in securities of companies or countries or in UCIs managed by the HSBC Group.

promoted by the financial product are attained.

For public or private listed corporate issues: the manager uses a best-in-class approach to select within each sector the companies that have the best ESG practices compared with their peers within each sector of the economy. For each ESG pillar, several criteria are used, including CO2 emissions for the E pillar, management of staff for the S pillar, and level of independence of directors for the G pillar.

For government issues (bonds): euro-denominated issuing countries are classified according to their overall "ESG" rating, which is based 50% on the Environmental pillar (E) and 50% on the Social/Governance pillar (S/G). The Social and Governance pillar includes the analysis of the political and governance system, human rights and fundamental freedoms, and social conditions. The Environmental pillar includes the analysis of natural resources, climate change and energy, production, and sustainable consumption.

The manager uses an ESG Selection approach to select the countries with a minimum ESG rating according to the non-financial rating agency ISS-Oekom from among euro-denominated issuing countries.

In addition, the subfund will:

- Exclude issuers in violation of one or more of the 10 principles of the United Nations Global Compact (or at least two alleged violations) and the OECD Guidelines for Multinational Enterprises.
- Exclude securities of companies involved in the production of controversial weapons or their components. Controversial weapons include, but are not limited to, anti-personnel mines, depleted uranium weapons and white phosphorus when used for military purposes. This exclusion is in addition to the exclusion policy on weapons prohibited by international treaties.
- Exclude securities of companies in the defence sector.
- Exclude securities of companies engaged in thermal coal activities. Companies that derive more than 10% of their revenue from electricity generated using thermal coal are partially excluded. Mining companies are completely excluded.
- Exclude securities of companies involved in the production of tobacco.
- Carefully consider environmental issues through voting and engagement activities.

The subfund is actively managed and does not track a benchmark. There is no benchmark representative of our management philosophy and therefore of our investment universe, nor has any index been designated to determine whether the subfund is aligned with the environmental or social characteristics that it promotes.

How did the sustainability indicators perform?

Indicator	Fund	Benchmark
ESG Score	6.83	6.54
E Pillar	7.42	6.60
S Pillar	6.28	6.32
G Pillar	6.79	6.70
3. GHG emissions intensity of beneficiary companies - tonnes of CO2 equivalent per million euros of revenue	71.24	90.63
10. Violations of the principles of the United Nations Global Compact and the OECD Guidelines for Multinational Enterprises	0.00%	0.06%
14. Exposure to companies involved in the production of controversial weapons or their components (anti-personnel mines, depleted uranium weapons, white phosphorus when used for military purposes)	0.00%	0.01%

The data in this report are as of 31 December 2024, based on the average of the positions at the end of each of the four quarters of the financial year ended 31 December 2024.

What were the objectives of the specific sustainable investments that the financial product intended to make and how did its sustainable investments help meet such objectives?

The subfund's sustainable investments are aligned with its environmental characteristics. The identification and ESG analysis of companies are performed as part of the investment decision-making process to reduce sustainability risks and increase returns.

How did the specific sustainable investments that the financial product made not cause significant harm to any environmental or social sustainable investment objective?

The principle of "do no significant harm" to environmental or social objectives applies only to the underlying sustainable investments of the subfund. This principle is incorporated into the investment decision-making process, which includes consideration of principal adverse impacts.

How have the indicators for adverse impacts on sustainability factors been taken into account?

HSBC Asset Management's "do no significant harm" (DNSH) assessment of issuers as part of its sustainable investment process includes consideration of principal adverse impacts (PAI). It involves a holistic analysis of the company's multiple sustainability impacts rather than focusing on a single factor. When an issuer is identified as potentially controversial, it cannot be considered a sustainable investment. All relevant PAIs are thus examined and integrated into the investment process according to an approach that combines exclusions (sectoral, the most severe ESG controversies, norms-based exclusions, etc.) with voting and shareholder engagement activities to instil and maintain a positive change dynamic within companies. Furthermore, a company will not qualify as sustainable if it does not comply with the principles of the United Nations Global Compact and its associated international standards, conventions, and treaties or if it is involved in weapons banned by international conventions. With the exception of these last two PAIs, we use proxies. In our view, the setting of exclusion thresholds (e.g. GHG emissions) for each PAI is not always relevant and could compromise the fact that many sectors and companies are in a transition strategy. In addition, engagement is essential to ensure that companies with limited disclosure, particularly in emerging economies, are initially excluded from the definition of sustainable investment and allow us to be a catalyst for positive environmental or social change. For example, we use a 10% threshold on revenues from thermal coal mining (and coal-fired power generation) as an exclusion filter to indirectly address all PAIs related to greenhouse gas emissions. HSBC's sustainable investment methodology is available on the management company's website:

www.assetmanagement.hsbc.fr/fr/retail-investors/about-us/responsible-investors/policies

Were the fund's sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

Principal adverse impacts

are the most significant adverse impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption, and anti-bribery matters.

HSBC is committed to applying and promoting international standards. The ten principles of the United Nations Global Compact are among the priorities of HSBC's Responsible Investment Policy. These principles include non-financial risks such as human rights, labour standards, the environment, and anti-corruption. HSBC is also a signatory to the United Nations Principles for Responsible Investment. They provide a framework for the identification and management of sustainability risks. In this subfund, companies with a proven violation of one of the 10 principles of the United Nations Global Compact or at least two alleged violations are systematically excluded. Companies are also assessed according to international standards such as the OECD Guidelines for Multinational Enterprises.

The EU Taxonomy sets out a "do no significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives, and is accompanied by criteria specific to the EU.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the European Union criteria for environmentally sustainable economic activities.

Any other sustainable investments must also do no significant harm to any environmental or social objectives.

How did this financial product take into consideration principal adverse impacts on sustainability factors?

The principal adverse impacts of investments are considered in the management of the subfund as follows:

- For the selection of investments, the manager has chosen an environmental indicator: "Greenhouse Gas Intensity". The subfund's consideration of this indicator stems from, in particular, the application of our coal phase-out policy. In addition, the manager favours companies with low CO2 emissions or companies working to reduce their carbon intensity.
- Exclusion of issuers:
- Considered non-compliant with the principles of the United Nations Global Compact and the OECD Guidelines for Multinational Enterprises;
- Exposed to controversial weapons.
- Lastly, the subfund takes into consideration the principal adverse impacts in its engagement approach, which incorporates several levers for action including 1) direct dialogue with companies about their consideration of environmental and social issues to ensure that they are able to face the future and maintain long-term financial viability, 2) the exercising of voting rights by which we express our support for positive development initiatives or, conversely, our disagreement when directors do not meet our expectations, and 3) a gradual escalation procedure with companies when the ESG risks or controversies to which they are exposed are not managed. In practice, the Greenhouse Gas Intensity indicator is taken into consideration, in particular, through dialogue with companies to assess how their carbon neutrality transition plans take into account impacts on employees, supply chains, communities and consumers.

The list comprises the investments making up the largest proportion of the financial product's investments at: Average of the positions at the end of each of the four quarters of the reference period ended 31/12/2024

What were this financial product's largest investments?

What was the proportion of sustainability-related investments?

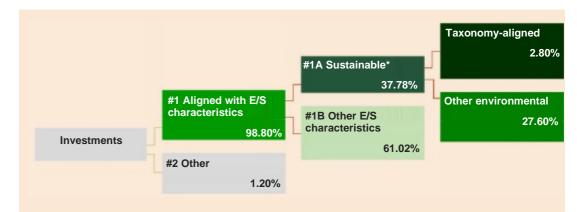

The proportion of sustainable investments was 37.78%.

The management company's sustainable investment methodology is available in the section "SFDR" Appendix of Regulation (EU) 2019/2088 of the annual report.

The asset allocation

describes the proportion of investments in specific assets.

What was the asset allocation?

The category **#1 Aligned** with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

The category **#2 Other** includes the remaining investments of the financial product that are neither aligned with the environmental or social characteristics nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

- the sub-category #1A Sustainable covering environmentally and socially sustainable investments;
- the sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments
- * A company or issuer that is considered a sustainable investment can contribute to both an environmental and a social objective that may or may not be aligned with the EU taxonomy. The figures in the chart above take this into account, but a company or issuer can only be counted once in category #1A Sustainable.

In which economic sectors were the investments made?

Sector / Sub-Sector	% of assets
Sovereign	25.72%
Financial	23.82%
Industry	12.41%
Utilities	6.94%
Electricity	4.66%
Gas	0.71%
Diversified businesses	1.00%
Telecommunications services	5.55%
Consumer staples	4.66%
Information technology	4.53%
Consumer discretionary	4.01%
Health	3.75%
Materials	3.37%
Real estate	2.69%
Energy	1.00%
Integrated Gas and Oil	0.77%
Oil and Gas Related Equipment and Services	0.06%
Oil and Gas Refining and Marketing	0.17%
Cash and derivatives	0.82%
Other	0.74%
Total	100.00%

To comply with the EU Taxonomy, the criteria applicable to natural gas include emission limits and switching to entirely renewable sources of electricity or to low-carbon fuel by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The proportion of sustainable investments aligned with the EU taxonomy is shown in the asset allocation table above.

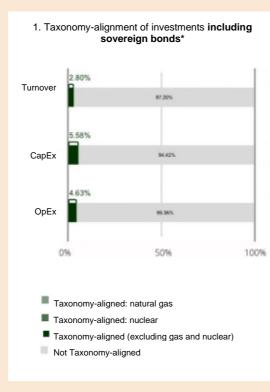

Has the financial product invested in natural gas and/or nuclear energy generation activities that are compliant with the EU Taxonomy? 1

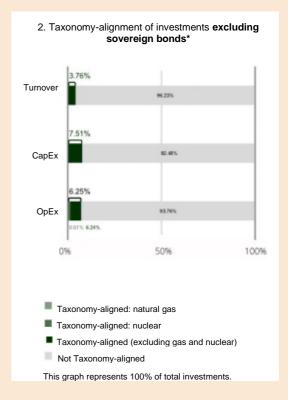

✓ Yes:	
	In natural gas In nuclear energy
□ No	

EU Taxonomyaligned activities are expressed as a percentage of:

- revenue to reflect the current ecological nature of investee companies;
- capital
 expenditure
 (CapEx) to show
 the green
 investments made
 by investee
 companies,
 relevant for a
 transition to a
 green economy;
- operational expenses (OpEx) reflecting green operational activities of investee companies.

The two graphs below show, in green, the percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

*For the purpose of these graphs, "sovereign bonds" include all sovereign exposures.

¹ Natural gas and/or nuclear energy generation activities only qualify as EU Taxonomy-eligible if they help mitigate climate change ("mitigation of climate change") and cause no significant harm to any of the EU Taxonomy objectives (see the explanatory note in the sidebar on the left). The set of criteria for natural gas and nuclear energy generation activities that are compliant with the EU Taxonomy are set out in Commission Delegated Regulation (EU) 2022/1214.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Enabling
activities directly

What was the share of investments made in transitional and enabling activities?

During the reporting period, the proportion of investments made in transitional activities was 0.00% and the proportion of investments made in enabling activities was 3.14%.

How did the percentage of EU Taxonomy-aligned investments compare with previous reference periods?

Indicator	2023-24	2022-23	2021-22
Revenue - Taxonomy aligned: fossil gas	N/A	N/A	0.00%
Turnover - Taxonomy-aligned: nuclear	0.00%	N/A	0.00%
Revenue - Taxonomy aligned (excluding gas and nuclear)	2.80%	2.37%	0.00%
Revenue - Not Taxonomy-aligned	97.20%	97.63%	100.00%
CapEx - Taxonomy-aligned: natural gas	N/A	N/A	0.00%
CapEx - Taxonomy-aligned: nuclear	0.00%	N/A	0.00%
CapEx - Not Taxonomy-aligned	5.58%	5.45%	0.00%
CapEx - Taxonomy-aligned (excluding gas and nuclear)	94.42%	94.55%	100.00%
CapEx - Taxonomy-aligned: natural gas	N/A	N/A	0.00%
OpEx - Taxonomy-aligned: nuclear	0.00%	0.01%	0.00%
OpEx - Taxonomy-aligned (excluding gas and nuclear)	4.63%	4.39%	0.00%
OpEx - Not Taxonomy-aligned	95.36%	95.60%	100.00%

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

Sustainable investments with an environmental objective not aligned with the EU taxonomy accounted for 27.60%. The fund has not committed to investments aligned with the EU taxonomy.

What was the share of socially sustainable investments?

The subfund does not commit to having a minimum share of socially sustainable investments. However, when assessing issuers, the subfund manager does look at their employment characteristics, respect for human rights and employee rights, management conduct, and corporate social responsibility.

What investments were included under "Other", what was their purpose and were they covered by any minimum environmental or social safeguards?

The subfund holds cash, derivatives, as well as investments for which no non-financial analysis could be performed due to the unavailability of ESG data. Derivatives are used for portfolio risk adjustment (exposure, hedging).

What actions have been taken to attain the environmental and/or social characteristics during the reference period?

The subfund promotes ESG characteristics by investing primarily in companies chosen for their good environmental, social and governance practices and their financial qualities. This approach consists of selecting the best companies within the investment universe according to ESG criteria.

During 2024, we constantly adjusted the portfolio to meet our commitments. For example, we sold our shares in BNP Paribas, Commerz Bank and Bouygues, which were no longer compatible with our objectives.

How did this financial product perform compared with its benchmark?

The subfund is actively managed and does not track a benchmark. There is no benchmark representative of our management philosophy and therefore of our investment universe, nor has any index been designated to determine whether the subfund is aligned with the environmental or social characteristics that it promotes. The information requested in this section is therefore not applicable to this product.

How does the benchmark differ from a broad market index?
Not applicable

How did this financial product perform with regard to the sustainability indicators designed to determine the benchmark's alignment with the environmental or social characteristics promoted?

Not applicable

- How did this financial product perform compared with its benchmark?
 Not applicable
- How did this financial product perform compared with the broad market index?
 Not applicable

Benchmarks are indexes used to gauge whether the financial product attains the environmental or social characteristics that it promotes.

Subfund:

HSBC RESPONSIBLE INVESTMENT FUNDS - SRI BALANCED

Activity report

Equity market allocation:

Equity markets made significant progress in 2024 with a clear outperformance of US indices. This good performance can be explained by accommodative monetary policies, with a 1% cut in key rates by the Fed and 1.35% by the ECB and a further outperformance of US growth linked to AI, such as the seven main US technology and communication companies, which gained 67% in 2024 compared with 17% for the global index in local currencies.

We remained slightly underexposed at the beginning of the year in anticipation of a slowdown in activity, but we judiciously increased our exposure following more robust economic performance.

As of 31 December 2024, the equity exposure of HRIF - SRI Balanced was 50.3% of assets, slightly higher than that of its investment universe.

Exposure on equity markets:

The equity segment consists mainly of physical securities and UCITS. This combination exposes the segment to various themes. In order to adjust the directional allocation, derivatives are used.

The management of the eurozone equity allocation follows our best-in-class SRI selection process, which aims to prioritise stocks for their good ESG practices. Added to this is an active fundamental approach based on an examination of the profitability/valuation profile, which favours stocks with an attractive valuation and profitability likely to improve significantly.

Over the period, sector allocation contributed positively to the subfund's relative performance. The positive contributions came from the overexposure to insurance and banking and the underweighting of consumer durables, energy and consumer staples. Negative contributions came from an overexposure to transport and utilities and an underweight position in capital goods.

Stock-picking contributed negatively to the fund's relative performance, notably our picks in semiconductors (STM), energy (Neste Q2 ESG), automotive (BMW) and capital goods (Kion, Siemens, Metso). Notable positive contributions came from Bawag and Erste in banking, Relx in business services, CRH and DSM in commodities and Iberdrola in utilities.

Overall, the eurozone equity allocation made a positive contribution in absolute terms and in line with its benchmark index.

International diversification is achieved by investing in the HRIF - SRI Global Equity subfund. This positioning was positive in terms of absolute performance but negative in terms of relative contribution due to the subfund's underperformance relative to its benchmark index.

As at 31 December 2024, we hold approximately 40.8% in direct securities and 10.2% in the HRIF - SRI Global Equity subfund.

We use futures on the Euro Stoxx 50 index to adjust the equity exposure. We have a short position of approximately -0.9% as of 31 December 2024.

Fixed income allocation:

In 2024, the interest rate markets went through three main phases up to the end of May, followed by a period of easing until the end of September and a phase of volatility marked by spikes in bond market tensions in the final quarter. We started the year with a lower sensitivity to government bonds than the benchmark index. We judiciously reduced this underexposure in early June. The normalisation of inflation and the accommodative bias of monetary policy in the eurozone are supporting factors in the medium term.

Exposure on bond markets:

SRI investment outside the eurozone is based on a systematic approach with a desire to maximise the ESG score under the constraint of Tracking Error. In practice, the selected securities belong to the first quartile of each sector. Geographical deviations are very modest.

Credit risk premiums tightened overall during the year and private credit outperformed government bonds. Our preference for private debt was beneficial to performance.

As of 31 December 2024, the bond allocation of the HRIF - SRI Balanced subfund was close to 46.5% compared with 50% for the investment universe.

Investments on the money market:

We use money market instruments tactically to hedge against rising volatility in equity and fixed income markets.

The allocation uses the following fund:

HSBC SRI Money

As of 31 December 2024, we held approximately 2.3%.

Performance

At the close of the year, the subfund posted performance of 5.56% for the AC share and 6.22% for the IC share.

Past performance is not an indicator of the future results of the SICAV subfund.

Information on environmental, social, and governance (ESG) criteria

In accordance with Article L.533-22-1 of the French Monetary and Financial Code, the policy on considering environmental, social, and governance quality (ESG) criteria in the investment strategy is available on the management company's website at www.assetmanagement.hsbc.fr.

Further information on the inclusion of ESG criteria in the investment policy over the fiscal year

subfund available transparency code for the is to the public at www.assetmanagement.hsbc.fr and provides detailed information on the subfund's SRI approach.

"SFDR" Annex to Regulation (EU) 2019/2088 and its implementing technical standards

The subfund promotes environmental or social characteristics within under Article 8 of Regulation (EU) 2019/2088 of 27 November 2019 on sustainability-related disclosures in the financial services sector ("SFDR").

Information on environmental or social characteristics is available in the SFDR appendix of the annual report.

The management company's sustainable investment methodology is as follows:

Sustainable investment within the meaning of Article 2(17) of the European SFDR

The SFDR (EU Regulation 2019/2088 of the European Parliament and of the Council of 27 November 2019) on sustainability-related disclosures in the financial services sector comes into force in 2021, with the obligation for financial institutions to be transparent in their communication on sustainable investment strategies that incorporate environmental, social and governance (ESG) issues.

Under this regulation, as provided for in Article 2, point |17| of the SFDR, sustainable investment is defined as an investment that generates positive environmental and/or social outcomes. The challenge for asset managers has been to define and calculate the net positive contribution of companies to environmental and social issues, while ensuring that this positive contribution is not accompanied by negative impacts.

Sustainable investment is an investment in an economic activity that contributes to an **environmental objective** or an investment in an economic activity that contributes to a social objective, provided that these investments **do not cause significant harm** to any of these objectives and that the companies concerned apply **good governance** practices, particularly with regard to sound management structures, relations with staff, compensation, competent staff and compliance with tax obligations.

Article 2|17| of EU Regulation 2019/2088 on sustainability-related disclosures in the financial services sector (SFDR).

How is the sustainable contribution of issuers measured?

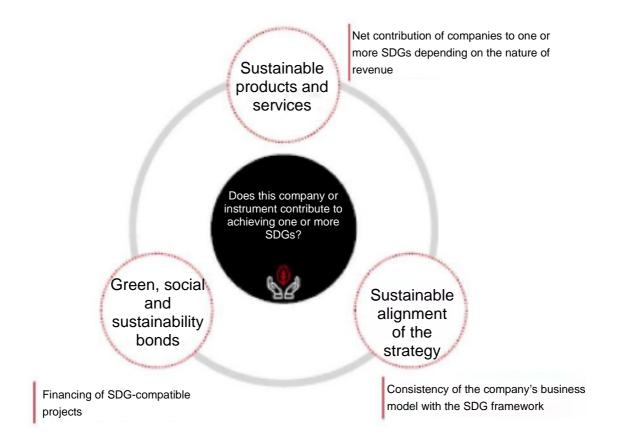

- We have developed a proprietary methodology to determine whether an instrument/issuer can be defined as a "sustainable investment" within the meaning of SFDR Article 2(17) and whether it can be taken into account in the calculation of the proportion of sustainable assets in portfolios.
- Since 2022, our methodology has evolved from seeking to align revenue with the United Nations Sustainable Development Goals (SDGs) to a broader approach that also incorporates the sustainable quality of issuers' business models, operations and sustainability strategies. This broadening of the scope of analysis better reflects the commitment and actions taken by companies to meet the challenges of sustainable development.
- Our assessment also includes a verification of the principle of Do No Significant Harm (DNSH) while taking good governance practices into account. This review takes into account the principle adverse impacts (PAI) in accordance with the SFDR. PAIs are a selection of environmental and social indicators to consider and report on, including greenhouse gas (GHG) emissions, carbon intensity and footprint, discharges and gender pay gaps.

Overview of the general investment process, which may differ depending on the product, the customer's mandate, or market conditions

Assessing the sustainable quality of an investment

Our methodology is based on the assessment of an investment's ability to contribute to the United Nations Sustainable Development Goals (SDGs) and has three dimensions¹:

An in-depth analysis is carried out on the basis of several external data sources, as well as internal analyses and research. These data sources include Sustainalytics, S&P Trucost and FTSE Green Revenue, as well as our proprietary databases on companies' green shares and their eligibility for the European taxonomy².

Based on sustainability thresholds defined for each of the analysed criteria (see details on page 3), issuers/instruments will be considered sustainable if they meet at least one of the three dimensions mentioned above.

Overview of the general investment process, which may differ depending on the product, the customer's mandate, or market conditions

495

2

⁽¹⁾ These three dimensions and their respective thresholds or indicators may be subject to change over time, without notice, depending on, for example, regulatory changes or clarifications, data availability, technological progress, etc. The parameters are as of the date indicated.

⁽²⁾ The European taxonomy refers to the classification of economic activities with a positive impact on the environment. Its objective is to direct investments towards sustainable – i.e. "green" – activities. https://finance.ec.europa.eu/sustainable-finance/tools-and-standards/eu-taxonomy-sustainable-activities en

The three dimensions of sustainability¹

3

To what extent does an investment contribute to one or more of the 17 SDGs?

Sustainable products and services

Current or expected sustainable net revenue in 3-5 years >=30%

Measure of the percentage of sustainable net revenue aligned with one or more of the 17 SDGs = measure of current or future revenue aligned with at least one of the SDGs (CAPEX², OPEX³ or EBITDA⁴), minus non-sustainable products and services, tobacco, thermal coal, prohibited weapons, the most severe environmental, social and governance (ESG) controversies, etc.

Quantitative score

Sustainable alignment of the strategy

Business models

Sustainable assessment of the business model: >=50% of the assessment questionnaire responses must obtain the highest score.

Assessing the sustainable quality of a company's business model integrates its operations and value chain, its sustainable development strategy and the management of the impacts of its activities on its environment and on communities. The positive contribution is identified based on alignment with the SDGs⁵.

Proven & verified (SMART⁵)

Sustainable theme

Thematic revenue of the company >=20%

or Assessment of the sustainable theme >=30%

These thresholds are tailored to emerging sustainable themes in industries that are still growing and/or fragmented, such as the circular economy.

Ambitions and practices

Progress made by the company in implementing its growth strategy verified on the basis of relevant indicators established by competent market bodies, for example credible carbon emission reduction targets approved by the Science Based Targets initiative (SBTi⁶).

Energy transition pathway

Assessment of activities that contribute to the energy transition based on the identification of the green share of the company's products and services (as a percentage of revenue) that makes it possible to finance the energy transition and the transition to renewable energies.

A company is considered a "sustainable transition asset" based on the intensity of its green share and criteria aligned with the Towards Sustainability label for the traditional energy (Oil & Gas) and power generation sectors.

Green, social and sustainability bonds

Use of bond issue proceeds in a sustainable business

For fixed income instruments, we view green, social and sustainability bonds as sustainable investments due to their clear and direct contribution to environmental and social goals. Green, social and sustainable bond instruments, as defined by the International Capital Market Association ("ICMA")⁸ and structures in accordance with its principles or guidelines, contribute, by their very design, to achieving environmental and/or social objectives aligned with the SDGs.

Source: HSB Asset Management

Overview of the general investment process, which may differ depending on the product, the customer's mandate, or market conditions

¹ These three dimensions and their respective thresholds or indicators may be subject to change over time, depending on, for example, regulatory changes or clarifications, data availability, technological progress, etc.

² Capital expenditure or CÁPEX, representing the capital invested for a company to acquire or modernise fixed, physical or non-consumable assets. Investment expenditures are primarily one-time investments in non-consumable assets used to maintain the existing operating levels within a company and to promote its future growth. Investment expenses server to buy or invest in tangible assets, such as real estate assets, raw materials, factories, buildings and equipment, which benefit the company beyond a single fiscal year. Intangible and non-physical assets, such as patents and licences, may also be considered as capital expenditure.

Operating expenses, or OPEX, include green costs, overheads and administrative costs, which are costs incurred as part of the main activities of the company, or overheads.
 EBITDA (earnings before interest, taxes, depreciation and amortisation) is another measure of a company's profitability other than net profit. By eliminating

[&]quot;EBITDA (earnings before interest, taxes, depreciation and amortisation) is another measure of a company's profitability other than net profit. By eliminating non-cash depreciation charges, as well as taxes and debt costs dependent on the capital structure, EBITDA attempts to represent the cash profit generated by the company's activities.

⁵ Specific, measurable, achievable, realistic and time-bound

⁶ Science-based targets provide companies with a clear path to reduce their greenhouse gas emissions, thereby helping to prevent the worst effects of climate change and preparing businesses for future growth. The targets are considered "science-based" if they are aligned with what the latest climate science deems necessary to meet the goals of the Paris Agreement, namely limiting global warming to 1.5°C above pre-industrial levels.

^{*} www.icmagroup.org/assets/documents/Sustainable-finance/2022-updates/Mapping-SDGs-to-GSS-Bonds_June-2022-28062022.pdf

Do no significant harm principle

4

Our methodology verifies the absence of significant harm (DNSH) while taking good governance practices into account.

Our sustainable investments meet the requirements of the DNSH principle as defined by the SFDR (article 2(17) to the extent that they apply our exclusion policy detailed below:

DNSH principle – exclusions

For corporate bonds:

- Controversial and banned weapons score ²
- Revenue from tobacco production > 0%³
- Revenue from coal mining > 10%³
- Revenue from energy production via thermal coal > 10%³
- Non-compliance with the United Nations Global Compact ^{3,4}
- Reporting of the most serious controversies³

For government bonds:

- Reporting a breach with regard to a social issue³
- Any country on the HSBC sanctions list

The DNSH principle is examined in the same way as the good governance of the companies held in the portfolio, which forms the basis of our fundamental analysis and investment process.

Assessment of governance practices

- Our reflection process goes beyond governance scores and ESG scores. The quality of governance is assessed
 on the basis of criteria specified in the investment process, including ethics, corporate culture and values,
 governance structure and corruption.
- We determine the materiality of governance through an analysis of the governance structure, controversies, compliance with the principles of the UN Global Compact and the OECD guidelines for multinational companies.
- At a minimum, we exclude the most severe controversies for our actively managed funds.

⁽²⁾ The data comes in particular from ISS-Ethix

⁽²⁾ The data comes in particular from Sustainalytics. Examples of controversies: activities related to child labour, major environmental damage, corruption, pollution, etc.

⁽³⁾ The United Nations Global Compact is a voluntary initiative based on the commitment of companies to implement universal principles of sustainable development and build partnerships to support the United Nations goal: https://unglobalcompact.org/.

Spotlight on the Sustainable Development Goals

5

The 2030 Sustainable Development Agenda, adopted by all member states of the United Nations, establishes a common plan for peace and prosperity for people and the planet, now and in the future.

At the heart of this agenda are the 17 SDGs, which call for action by all countries – both developed and developing – under a global partnership.

These goals were designed with the understanding that eradicating poverty and other deprivation must go hand in hand with strategies to improve health and education, reduce inequalities and stimulate economic growth, tackle climate change and work to preserve our oceans and forests.

For more information, please visit https://sdgs.un.org/goals.

Additional information relating to Shareholder Rights Directive II (SRD2)

Contribution to medium- and long-term performance

The deployed management strategy is active and disciplined. As a Multi-Asset manager, we focus on allocation decisions based on the HSBC Group's expertise for decisions in selecting securities. Decisions concerning shares in particular will attach importance to the financial criteria of valuation and profitability but also to non-financial criteria (environmental, social, and governance).

For allocation decisions, we assess investment opportunities within and between asset classes according to a multi-factor approach. In particular, the criteria of valuation, carry, and price dynamics are taken into account and evaluated in the light of the economic environment. Other criteria may also be incorporated on specific asset classes. The various sources of performance thus detected are combined to obtain a well-balanced distribution of active risk in the portfolio. These elements are likely to achieve the long-term objectives of outperforming the subfund's benchmark.

• Main significant risks

The subfund incurs primary and secondary risks, which are listed in the subfund's prospectus.

Turnover rate

Portfolio turnover rate: 20.08%

The SEC method is used to calculate the turnover rate: Annual TO = Min (Purchase of securities; Sale of securities) / Average AUM

Management of conflicts of interest

During the past fiscal year, there were no conflicts of interest related to engagement activities.

During this period, the management company decided to use a voting advisor, Institutional Shareholder Services (ISS), for engagement activities.

Securities lending

The management company did not engage in securities lending during the past fiscal year.

Information about investment decisions

Investment decisions are based on fundamental analysis of the companies included in the investment universe. Markets are not always efficient and do not always reflect the intrinsic value of companies.

In this context, investment decisions are based on long-term fundamental analysis, thus enabling us to take advantage of these opportunities arising from the excessive volatility of financial markets.

The management processes are based on exploiting the data from the fundamental analysis conducted by our independent research teams, whether in the short, medium, or long term. Furthermore, regardless of the asset class, the consideration of Environmental, Social, and Governance risks and opportunities (E.S.G. integration) is an integral part of the security selection process of the manager of the subfunds concerned with the objective of long-term outperformance.

Incidents affecting the subfund during the fiscal year and forthcoming

4 June 2024

Update of regulatory documentation with the following changes:

- ✓ Update of recurring costs and performance scenarios in the Key Information Documents (KID)
- ✓ Standardisation of the drafting of KIDs (covered by Article 8 of the SFDR and AMF category 1 "central communication") following the recommendations issued by the French Financial Markets Authority (AMF) as part of its SPOT control relating to compliance with asset management companies' contractual non-financial commitments.
- Information on the HSBC Group's responsible investment policies (coal policy and energy policy) has been specified in the prospectus and the SFDR appendix.

> 1 January 2025

Update of regulatory documentation resulting from changes made to the SRI label framework and other changes.

Following the entry into force on 1 March 2024 of the new SRI label framework applicable to French UCIs, the management of the subfunds that retain the label will change to adapt to the additional requirements of the SRI label set out below:

- 1- strengthen the requirements for selecting securities assets in the labelled subfund:
 - a) the market capitalisation weighted average ESG rating must be higher than the average ESG rating of the benchmark used for information purposes. In practice, the ESG rating that the subfund must outperform is calculated by removing the 30% worst stocks, based on exclusion criteria and the ESG rating. The "Best in class" approach has been abandoned in favour of the rating improvement approach.
 - b) the weighing assigned to each ESG pillar in the overall ESG rating is equal to at least 20% and varies according to the specific characteristics of the company's business sector.
 - c) a strict exclusion framework exists for each of the three ESG pillars, with the implementation of minimum exclusion criteria.
 - d) requirements in terms of monitoring controversies, shareholder engagement and voting policies have been strengthened.

- 2- a) ensure that application of the dual materiality requirement within the meaning of the European SFDR regulation is made systematic in management of the labelled subfund.
- 2- b) ensure consistency between the extra-financial performance of the labelled subfund, its ESG objectives and the associated performance monitoring indicators: the labelled subfund will undertake to outperform its benchmark indicator used for information purposes on two indicators most closely related to its ESG objective: the greenhouse gas (GHG) intensity indicator and the absence of human rights policy indicator.
- 3- incorporate a climate policy into the management of the labelled subfund: in order to limit its impact on the climate, the labelled subfund will no longer be able to invest in companies whose new projects are the exploration, exploitation and refining of fossil fuels, whether conventional or non-conventional.

In addition, in accordance with the changes to the French Financial Markets Authority (AMF) introduced by the regulations dated 6 October 2022, "operating and other service charges" may be deducted based on actual costs (the existing method) or based on a predefined flat rate, in both cases up to the maximum rate provided for in the prospectus.

With effect from 1 January 2025, HSBC Global Asset Management (France) has decided to deduct operating and other service charges based on a predefined flat rate.

The flat rate mentioned in the SICAV's prospectus will therefore be deducted even if the actual costs are lower than this rate. Conversely, if the actual costs are higher than the stated rate, the amount in excess of that flat rate will be borne by the management company.

Lastly, the wording of the following paragraphs of the prospectus will be updated:

- ✓ Restrictions on the issuance and redemption of units for US Persons
- ✓ Restrictions on the issuance and redemption of units for Canada residents
- ✓ Provisional measures prohibiting subscriptions to the fund from 12 April 2022.

Information relating to efficient portfolio management techniques and derivatives used by the subfund of the SICAV, pursuant to AMF position No. 2013-06

Efficient portfolio management techniques

As of the close of the fiscal year, the subfund of the SICAV did not use efficient portfolio management techniques.

Derivatives

As of the close of the fiscal year, the subfund of the SICAV did not use derivatives.

Aggregate exposure

The commitment method is used to calculate the aggregate exposure on financial futures.

Notes

A. General information

A1. Characteristics and activity of the open-ended UCI

A1a. Investment strategy and profile

The investment objective of the HSBC Responsible Investment Funds - SRI Balanced subfund is to maximise a performance corresponding to an investment with a moderate exposure to equity market risk over a recommended investment period of at least 4 years. This investment is made by selecting securities of companies or countries selected for their good environmental, social, and governance (ESG) practices and their financial quality. The long-term strategic allocation is composed of 50% equities and 50% international bonds with a euro bias.

The UCI's prospectus fully describes and specifies these characteristics

A1b. Characteristics of the UCI over the last 5 financial years

	31/12/2020	31/12/2021	30/12/2022	29/12/2023	31/12/2024

A2. Accounting policies

The annual financial statements are presented for the first time in the form prescribed by ANC regulation 2020-07, as amended by ANC regulation 2022-03.

1 Changes in accounting methods, including presentation, in connection with the application of the new accounting regulation relating to the annual financial statements of undertakings for collective investment with variable capital (ANC regulation 2020-07 as amended)

This new regulation imposes changes in accounting methods, including changes in the presentation of annual financial statements. Comparability with the financial statements for the previous financial year cannot therefore be achieved.

NB: the statements concerned are (in addition to the balance sheet and the income statement): B1. Change in equity and financing liabilities; D5a. Allocation of distributable amounts relating to net income and D5b. Allocation of distributable amounts relating to net realised gains and losses.

Thus, in accordance with the second paragraph of Article 3 of ANC Regulation 2020-07, the financial statements do not present data from the previous financial year; the previous year's financial statements are included in the notes to the financial statements.

These changes mainly concern:

- the balance sheet structure, which is now presented by types of eligible assets and liabilities, including loans and borrowings;
- the structure of the income statement, which is extensively modified; the income statement includes in particular: exchange rate differences on financial accounts, unrealised gains and losses, realised gains and losses, and transaction fees;
- the removal of the off-balance sheet table (part of the information on the items in this table is now included in the notes);
- the removal of the option to recognise costs included in the cost price (without retroactive effect for funds previously applying the included costs method):
- the distinction between convertible bonds and other bonds, as well as their respective accounting records;
- a new classification of target funds held in the portfolio according to the model: UCITS / AIF / Other;
- the recognition of forward foreign exchange commitments, which is no longer done on the balance sheet but off-balance sheet, with information on forward foreign exchange contracts covering a specific portion;
- the addition of information relating to direct and indirect exposures to the various markets;
- the presentation of the inventory, which now distinguishes eligible assets and liabilities from forward financial instruments;
- the adoption of a single presentation model for all types of UCI;
- the removal of account aggregation for funds with subfunds.

2 Accounting rules and methods applied during the financial year

General accounting principles apply (subject to the changes described above):

- true and fair view, comparability, going concern;
- accuracy, reliability;
- prudence:
- consistency of accounting methods from one period to the next.

The interest cash basis is used to recognise revenue from fixed-income securities.

Purchases and sales of securities are booked excluding expenses.

The euro is the reference currency for the portfolio's accounting.

The duration of the reporting period is 12 months.

Asset valuation rules

The asset valuation rules applied by the accounting manager are outlined below according to the instruments held by the subfund:

The subfund has adopted the euro as the reference currency.

The prices used for the valuation of securities traded on the stock exchange are the closing prices. The prices applied for the valuation of bonds are an average contributor. Funds are valued at their last known price.

Negotiable debt securities with a residual life of more than three months are valued at the market rate, with the exception of variable-rate or adjustable-rate negotiable debt securities not presenting any particular market sensitivity.

A simplified method known as "linearisation" is applied for negotiable debt instruments whose residual lifespan is less than three months with no particular sensitivity to the market on the basis of the crystallised three-month rate.

Repurchase agreements are valued at the contract price.

Firm and optional forward transactions and swap transactions made on OTC markets and authorised under the applicable fund regulations are measured at their market value or at an estimated value using methods chosen by the management company. Interest rate and/or currency swaps are valued at their market value based on the price calculated by discounting future cash flows (principal and interest) at the prevailing market interest and/or exchange rates.

European and foreign futures are valued using their settlement prices.

Interest rate and foreign currency swaps are valued under market conditions.

The valuation of interest-rate swaps against share performance is carried out:

- under market conditions for the fixed income branch
- according to the underlying security rate for the equity branch.

The valuation of Credit Default Swaps (CDS) stems from a model used by the spreads market.

Off-balance sheet commitments in European and foreign futures markets are calculated as follows:

- FUTURES

(Qty x Nominal x Daily price x Contract currency)

- OPTIONS

(Qty x delta) x (Nominal of underlying instrument x Daily price of underlying instrument x Contract currency).

For swaps, the off-balance-sheet commitment corresponds to the nominal value of the contract plus or minus the interest differential and the unrealised capital gain or loss on the closing date.

Transaction fees are recognised in specific accounts of each subfund and are not added to the price.

Financial instruments whose prices were not determined on the day of valuation or whose prices have been adjusted are valued at their probable trading price under the responsibility of the Management Company. These valuations and the associated justification are provided to the statutory auditor for auditing purposes.

Valuation of financial guarantees

Collateral is valued daily at the market price (mark to market).

Haircuts can be applied to collateral received in the form of securities according to the level of risk. Margin calls occur daily unless otherwise indicated in the master agreement covering these transactions on in case of agreement between the Management Company and the counterparty on the application of a trigger threshold.

Direct exposure to credit markets: principles and rules used to break down the components of the UCI's portfolio (table C1f.):

All elements of the UCI's portfolio exposed directly to the credit markets are shown in this table.

For each item, the various ratings are retrieved: issue and/or issuer rating, long-term and/or short-term rating.

These ratings are retrieved from three rating agencies.

The rules for determining the rating used are then:

1st level: if there is a rating for the issue, it is used to the detriment of the issuer's rating

2nd level: the lowest long-term rating is selected from among those available from the three rating agencies

If there is no long-term rating, the lowest short-term rating is used among those available from the three rating agencies

If no rating is available, the item will be considered as "Unrated".

Lastly, according to the rating selected, the item is categorised according to market standards defining the concepts of "Investment Grade" and "Non-Investment Grade".

Financial management

Management fees and running costs cover all costs relating to the Fund for financial, administrative, and accounting management, custodianship, distribution, auditing, etc.

These fees are charged to the Fund's income statement.

Management fees do not include transaction fees. For more information on the costs actually billed to the fund, please see the prospectus.

They are recognised on a pro rata basis each time the net asset value is calculated.

The aggregate of these fees complies with the maximum fee rate as a percentage of the net assets given in the fund's prospectus or rules:

	Fees charged to the subfund	Base	AC shares	IC shares	
1	Financial management fees(*)	Daily net assets	Maximum 1.20% incl. tax	Maximum 0.60% incl. tax	
2	Operating and other service charges(**)	Daily net assets	Maximum 0.20% incl. tax.		
3	Maximum indirect charges (Management commissions and fees)	Daily net assets	Maximum 0.30% incl. tax		
4	Transaction fees	Deducted from each transaction	None		
5	Outperformance fee	Daily net assets	None		

^{*} A percentage of management fees may be passed on to third-party marketing agents in return for marketing the subfund

I. Fund registration and listing fees:

- fees related to the subfund's registration in other Member States (including fees charged by advisors (lawyers, consultants, etc.) for carrying out marketing formalities with the local regulator on the asset management company's behalf);
- fees for listing the subfund and publication of net asset values for investor information purposes; fees for distribution platforms (excluding retrocessions); Agents in foreign countries interfacing with distribution.

II. Costs for keeping clients and distributors informed

- the costs of drafting and distributing KIDs, prospectuses and regulatory reports;
- the costs of providing regulatory information to distributors:
- the costs of providing information to unitholders by all means;
- information specific to direct and indirect holders; 8: Letters to holders;
- website administration costs:
- translation costs specific to the subfund.

III. Data costs

- costs of data used for redistribution to third parties;
- costs for auditing and promoting labels (e.g. SRI label, Greenfin label)

IV. Depositary, legal, audit, tax fees, etc.

- statutory audit fees:
- depositary fees;
- fees for delegation of administrative and accounting management;
- tax-related fees including those of lawyers and external consultants (recovery of withholding tax on behalf of the fund, local tax agent, etc.);
- legal fees specific to the subfund;
- Costs of creating a new subfund, amortisable over 5 years.

^{**} Operating and other service charges include:

V. Costs relating to compliance with regulatory obligations and regulatory reporting

- costs for submitting regulatory reports to the regulator specific to the subfund;
- fees for compulsory professional associations
- operating charges for deployment of voting policies at General Meetings

The following costs may be added to the above-listed fees charged to the subfund:

- contributions due for the management of the subfund pursuant to Article L. 621-5-3-II-4°of the French Monetary and Financial Code;
- exceptional and non-recurring taxes, levies and government duties (in relation to the subfund);
- exceptional and non-recurring costs for the recovery of receivables (e.g. Lehman) or proceedings to assert a right (e.g. class action).

Swing pricing

The management company has implemented a swing pricing mechanism to adjust the net asset value of each of the subfunds once a trigger threshold is reached in order to protect the interests of the unitholders present in each of the subfunds.

Under this mechanism, investors bear the portfolio adjustment costs — including transaction fees, bid/offer spreads and taxes or fees applicable to the UCI — relating to investments or disinvestments when there are significant numbers of subscriptions and redemptions.

When the net balance of investor subscription and redemption orders exceeds a predefined threshold, called the "trigger point", the NAV is adjusted.

The NAV is adjusted up or down if the balance of subscriptions/redemptions is respectively positive or negative, so as to take into account the readjustment costs attributable to the net subscription and/or redemption orders.

The trigger threshold is expressed as a percentage of the subfund's net assets.

The parameters for the trigger point and the NAV adjustment factor are determined by the Management Company and periodically reviewed.

The adjusted ("swung") NAV is the subfund's only NAV and is therefore the only NAV published and communicated to unitholders.

By applying swing pricing with a trigger threshold, it is possible that the UCI's volatility will not come from only the volatility of the financial instruments in the portfolio.

In accordance with the regulatory provisions, the management company does not communicate the trigger points and ensures that internal communication channels are restricted so as to safeguard the confidential nature of the information.

Appropriation of distributable amounts

Definition of distributable amounts

Distributable amounts consist of the following:

Income:

Net revenue plus retained earnings and plus or minus the balance of the accrued income account.

Gains and losses:

Capital gains realised, net of costs, minus realised losses, net of costs, recognised during the fiscal year, plus net gains of the same type recognised in previous fiscal years that were not distributed or accumulated, plus or minus the balance of accrued gains.

The amounts referred to as "income" and "gains and losses" may be distributed, in whole or in part, independently of each other.

Distributable sums are paid within a maximum period of five months following the end of the financial year.

Where the UCI is authorised under Regulation (EU) No. 2017/1131 of the European Parliament and of the Council of 14 June 2017 on money market funds, by way of derogation from the provisions of I, distributable sums may also include unrealised gains.

Appropriation of distributable amounts:

Share(s)	Allocation of net income	Appropriation of net realised gains or losses

NOTES TO THE ANNUAL FINANCIAL STATEMENTS

1. Accounting policies

The annual financial statements are presented in the form prescribed by ANC regulation no. 2014-01, as amended.

General accounting principles are applied:

- true and fair view, comparability, going concern;
- accuracy, reliability;
- prudence:
- consistency of accounting methods from one period to the next.

The interest cash basis is used to recognise revenue from fixed-income securities.

Purchases and sales of securities are booked excluding expenses.

The euro is the reference currency for the portfolio's accounting.

The duration of the reporting period is 12 months.

Asset valuation rules

The asset valuation rules applied by the accounting manager are outlined below according to the instruments held by the subfund:

The subfund has adopted the euro as the reference currency.

The prices used for the valuation of securities traded on the stock exchange are the closing prices.

The prices applied for the valuation of bonds are an average contributor. Funds are valued at their last known price.

Negotiable debt securities with a residual life of more than three months are valued at the market rate, with the exception of variable-rate or adjustable-rate negotiable debt securities not presenting any particular market sensitivity.

A simplified method known as "linearisation" is applied for negotiable debt instruments whose residual lifespan is less than three months with no particular sensitivity to the market on the basis of the crystallised three-month rate.

Repurchase agreements are valued at the contract price.

Firm and optional forward transactions and swap transactions made on OTC markets and authorised under the applicable fund regulations are measured at their market value or at an estimated value using methods chosen by the management company. Interest rate and/or currency swaps are valued at their market value based on the price calculated by discounting future cash flows (principal and interest) at the prevailing market interest and/or exchange rates.

European and foreign futures are valued using their settlement prices.

Interest rate and foreign currency swaps are valued under market conditions.

The valuation of interest-rate swaps against share performance is carried out:

- under market conditions for the fixed income branch
- according to the underlying security rate for the equity branch.

The valuation of credit default swaps (CDS) stems from a model populated by market spreads.

Off-balance sheet commitments in European and foreign futures markets are calculated as follows:

- FUTURES

(Qty x Nominal x Daily price x Contract currency)

- OPTIONS

(Qty x delta) x (Nominal of underlying instrument x Daily price of underlying instrument x Contract currency).

For swaps, the off-balance-sheet commitment corresponds to the nominal value of the contract plus or minus the interest differential and the unrealised capital gain or loss on the closing date.

Transaction fees are recognised in specific accounts of each subfund and are not added to the price.

Financial instruments whose prices were not determined on the day of valuation or whose prices have been adjusted are valued at their probable trading price under the responsibility of the Management Company. These valuations and the associated justification are provided to the statutory auditor for auditing purposes.

Valuation of financial guarantees

Collateral is valued daily at the market price (mark to market).

Haircuts can be applied to collateral received in the form of securities according to the level of risk.

Margin calls occur daily unless otherwise indicated in the master agreement covering these transactions on in case of agreement between the Management Company and the counterparty on the application of a trigger threshold.

Financial management

Management fees and running costs cover all costs relating to the Fund for financial, administrative, and accounting management, custodianship, distribution, auditing, etc.

These fees are charged to the income statement of the UCI.

Management fees do not include transaction fees. For more information on the costs actually billed to the fund, please see the prospectus.

They are recognised on a pro rata basis each time the net asset value is calculated.

The aggregate of these fees complies with the maximum fee rate as a percentage of the net assets given in the fund's prospectus or rules:

FR0013443199 - HSBC RESPONSIBLE INVESTMENT FUNDS - SRI BALANCED IC share: Maximum fee rate of 0.60% including tax.

FR0013443181 - HSBC RESPONSIBLE INVESTMENT FUNDS - SRI BALANCED AC share: Maximum fee rate of 1.20% including tax.

Operating and other service charges are a maximum of 0.20% including tax for all shares.

The rate of indirect fees is a maximum of 0.30% (inclusive of tax) of the daily net assets for all units.

Swing pricing

The management company has implemented a swing pricing mechanism to adjust the net asset value of each of the subfunds once a trigger threshold is reached in order to protect the interests of the unitholders present in each of the subfunds.

Under this mechanism, investors bear the portfolio adjustment costs — including transaction fees, bid/offer spreads and taxes or fees applicable to the UCI — relating to investments or disinvestments when there are significant numbers of subscriptions and redemptions.

When the net balance of investor subscription and redemption orders exceeds a predefined threshold, called the "trigger point", the NAV is adjusted.

The NAV is adjusted up or down if the balance of subscriptions/redemptions is respectively positive or negative, so as to take into account the readjustment costs attributable to the net subscription and/or redemption orders.

The trigger threshold is expressed as a percentage of the subfund's net assets.

The parameters for the trigger point and the NAV adjustment factor are determined by the Management Company and periodically reviewed.

The adjusted ("swung") NAV is the subfund's only NAV and is therefore the only NAV published and communicated to unitholders.

By applying swing pricing with a trigger threshold, it is possible that the UCI's volatility will not come from only the volatility of the financial instruments in the portfolio.

In accordance with the regulatory provisions, the management company does not communicate the trigger points and ensures that internal communication channels are restricted so as to safeguard the confidential nature of the information.

Appropriation of distributable amounts

Definition of distributable amounts

Distributable amounts consist of the following:

Income:

Net income for the financial year is equal to the amount of interest, arrears, premiums and bonuses, dividends, directors' fees and any other income relating to the securities that constitute the portfolio, plus income from temporary cash holdings, less management fees and borrowing costs.

Retained earnings are added to income and the balance of accrued income is added or subtracted as appropriate.

Gains and losses:

Capital gains realised, net of costs, minus realised losses, net of costs, recognised during the fiscal year, plus net gains of the same type recognised in previous fiscal years that were not distributed or accumulated, plus or minus the balance of accrued gains.

Appropriation of distributable amounts:

Share(s)	Annronriation of net income	Appropriation of net realised gains or losses
HSBC RESPONSIBLE INVESTMENT FUNDS - SRI BALANCED AC share	Accumulated	Accumulated
HSBC RESPONSIBLE INVESTMENT FUNDS - SRI BALANCED IC share	Accumulated	Accumulated

Sustainable investment

means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm either of these objectives and that the financial product's investee companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852, establishing a list environmentally sustainable economic activities. This regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective are not

necessarily aligned with the Taxonomy.

Product name: HSBC RESPONSIBLE INVESTMENT FUNDS - SRI BALANCED

Legal entity identifier: 969500HU1926N1M5G696

Environmental and/or social characteristics

Does	oes this financial product have a sustainable investment objective?				
•		Yes		✓	No
	_	in economic activities that qualify as environmentally sustainable under the EU Taxonomy in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy		(E/S) did no sustai minim	comoted Environmental/Social characteristics and while it not have as its objective a sinable investment, it had a mum proportion of 42.88% ainable investments with an environmental objective and made in economic activities that qualify as environmentally sustainable under the EU Taxonomy with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
		ade sustainable investments a social objective: _%		did r	romoted E/S characteristics but not make any sustainable estments.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Sustainability indicators measure how the environmental or social characteristics

The subfund promotes E, S and G characteristics by investing in international equity and fixed-income markets with a euro bias by selecting securities issued by companies or countries in a universe of issues that meet Environmental, Social and Governance (ESG) criteria. The subfund is invested, at its manager's discretion, either in securities of companies or countries or in UCIs managed by the HSBC Group.

promoted by the financial product are attained.

For public or private listed corporate issues: the manager uses a best-in-class approach to select within each sector the companies that have the best ESG practices compared with their peers within each sector of the economy. For each ESG pillar, several criteria are used, including CO2 emissions for the E pillar, management of staff for the S pillar, and level of independence of directors for the G pillar.

For government issues (bonds): euro-denominated issuing countries are classified according to their overall "ESG" rating, which is based 50% on the Environmental pillar (E) and 50% on the Social/Governance pillar (S/G). The Social and Governance pillar includes the analysis of the political and governance system, human rights and fundamental freedoms, and social conditions. The Environmental pillar includes the analysis of natural resources, climate change and energy, production, and sustainable consumption.

The manager uses an ESG Selection approach to select the countries with a minimum ESG rating according to the non-financial rating agency ISS-Oekom from among euro-denominated issuing countries.

In addition, the subfund will:

- Exclude issuers in violation of one or more of the 10 principles of the United Nations Global Compact (or at least two alleged violations) and the OECD Guidelines for Multinational Enterprises.
- Exclude securities of companies involved in the production of controversial weapons or their components. Controversial weapons include, but are not limited to, anti-personnel mines, depleted uranium weapons and white phosphorus when used for military purposes. This exclusion is in addition to the exclusion policy on weapons prohibited by international treaties.
- Exclude securities of companies in the defence sector.
- Exclude securities of companies engaged in thermal coal activities. Companies that derive more than 10% of their revenue from electricity generated using thermal coal are partially excluded. Mining companies are completely excluded.
- Exclude securities of companies involved in the production of tobacco.
- Carefully consider environmental issues through voting and engagement activities.

The subfund is actively managed and does not track a benchmark. There is no benchmark representative of our management philosophy and therefore of our investment universe, nor has any index been designated to determine whether the subfund is aligned with the environmental or social characteristics that it promotes.

How did the sustainability indicators perform?

Indicator	Fund	Benchmark
ESG Score	6.82	6.43

Fund

What were the objectives of the specific sustainable investments that the financial product intended to make and how did its sustainable investments help meet such objectives?

The subfund's sustainable investments are aligned with its environmental characteristics. The identification and ESG analysis of companies are performed as part of the investment decision-making process to reduce sustainability risks and increase returns.

How did the specific sustainable investments that the financial product made not cause significant harm to any environmental or social sustainable investment objective?

The principle of "do no significant harm" to environmental or social objectives applies only to the underlying sustainable investments of the subfund. This principle is incorporated into the investment decision-making process, which includes consideration of principal adverse impacts.

How have the indicators for adverse impacts on sustainability factors been taken into account?

HSBC Asset Management's "do no significant harm" (DNSH) assessment of issuers as part of its sustainable investment process includes consideration of principal adverse impacts (PAI). It involves a holistic analysis of the company's multiple sustainability impacts rather than focusing on a single factor. When an issuer is identified as potentially controversial, it cannot be considered a sustainable investment. All relevant PAIs are thus examined and integrated into the investment process according to an approach that combines exclusions (sectoral, the most severe ESG controversies, norms-based exclusions, etc.) with voting and shareholder engagement activities to instil and maintain a positive change dynamic within companies. Furthermore, a company will not qualify as sustainable if it does not comply with the principles of the United Nations Global Compact and its associated international standards, conventions, and treaties or if it is involved in weapons banned by international conventions. With the exception of these last two PAIs, we use proxies. In our view, the setting of exclusion thresholds (e.g. GHG emissions) for each PAI is not always relevant and could compromise the fact that many sectors and companies are in a transition strategy. In addition, engagement is essential to ensure that companies with limited disclosure, particularly in emerging economies, are initially excluded from the definition of sustainable investment and allow us to be a catalyst for positive environmental or social change. For example, we use a 10% threshold on revenues from thermal coal mining (and coal-fired power generation) as an exclusion filter to indirectly address all PAIs related to greenhouse gas emissions. HSBC's sustainable investment methodology is available on the management company's website:

www.assetmanagement.hsbc.fr/fr/retail-investors/about-us/responsible-investors/policies

Were the fund's sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

Principal adverse impacts

are the most significant adverse impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption, and anti-bribery matters.

HSBC is committed to applying and promoting international standards. The ten principles of the United Nations Global Compact are among the priorities of HSBC's Responsible Investment Policy. These principles include non-financial risks such as human rights, labour standards, the environment, and anti-corruption. HSBC is also a signatory to the United Nations Principles for Responsible Investment. They provide a framework for the identification and management of sustainability risks. In this subfund, companies with a proven violation of one of the 10 principles of the United Nations Global Compact or at least two alleged violations are systematically excluded. Companies are also assessed according to international standards such as the OECD Guidelines for Multinational Enterprises.

The EU Taxonomy sets out a "do no significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives, and is accompanied by criteria specific to the EU.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the European Union criteria for environmentally sustainable economic activities.

Any other sustainable investments must also do no significant harm to any environmental or social objectives.

How did this financial product take into consideration principal adverse impacts on sustainability factors?

The principal adverse impacts of investments are considered in the management of the subfund as follows:

- For the selection of investments, the manager has chosen an environmental indicator: "Greenhouse Gas Intensity". The subfund's consideration of this indicator stems from, in particular, the application of our coal phase-out policy. In addition, the manager favours companies with low CO2 emissions or companies working to reduce their carbon intensity.
- Exclusion of issuers:
- Considered non-compliant with the principles of the United Nations Global Compact and the OECD Guidelines for Multinational Enterprises;
- Exposed to controversial weapons.
- Lastly, the subfund takes into consideration the principal adverse impacts in its engagement approach, which incorporates several levers for action including 1) direct dialogue with companies about their consideration of environmental and social issues to ensure that they are able to face the future and maintain long-term financial viability, 2) the exercising of voting rights by which we express our support for positive development initiatives or, conversely, our disagreement when directors do not meet our expectations, and 3) a gradual escalation procedure with companies when the ESG risks or controversies to which they are exposed are not managed. In practice, the Greenhouse Gas Intensity indicator is taken into consideration, in particular, through dialogue with companies to assess how their carbon neutrality transition plans take into account impacts on employees, supply chains, communities and consumers.

The list comprises the investments making up the largest proportion of the financial product's investments at: Average of the positions at the end of each of the four quarters of the reference period ended 31/12/2024

The asset allocation

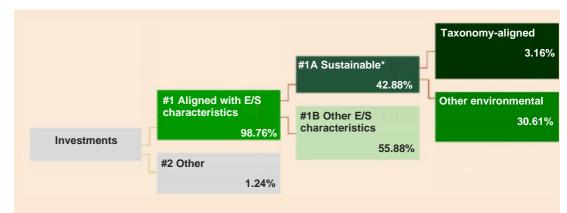

describes the proportion of investments in specific assets.

What was the proportion of sustainability-related investments?

The proportion of sustainable investments was 42.88%.

The management company's sustainable investment methodology is available in the section "SFDR" Appendix of Regulation (EU) 2019/2088 of the annual report.

What was the asset allocation?

The category **#1 Aligned** with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

The category **#2 Other** includes the remaining investments of the financial product that are neither aligned with the environmental or social characteristics nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

- the sub-category #1A Sustainable covering environmentally and socially sustainable investments;
- the sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments
- * A company or issuer that is considered a sustainable investment can contribute to both an environmental and a social objective that may or may not be aligned with the EU taxonomy. The figures in the chart above take this into account, but a company or issuer can only be counted once in category #1A Sustainable.

In which economic sectors were the investments made?

Sector / Sub-sector	% of assets
Financial	22.25%
Sovereign	21.05%
Industry	12.87%
Information technology	7.69%
Telecommunications services	6.96%
Utilities	6.43%
Electricity	4.60%
Diversified businesses	1.23%
Consumer discretionary	5.25%
Health	4.75%
Consumer staples	4.46%
Materials	4.20%
Real estate	1.16%
Cash and derivatives	1.07%
Other	1.02%
Energy	0.84%
Integrated Gas and Oil	0.45%
Oil and Gas Related Equipment and Services	0.12%
Oil and Gas Refining and Marketing	0.28%
Total	100.00%

To comply with the EU Taxonomy, the criteria applicable to natural gas include emission limits and switching to entirely renewable sources of electricity or to low-carbon fuel by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The proportion of sustainable investments aligned with the EU taxonomy is shown in the asset allocation table above.

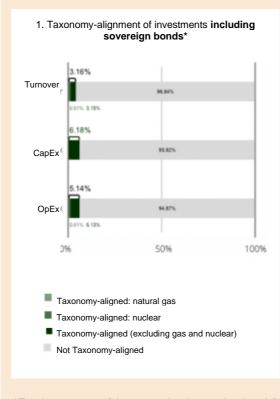

Has the financial product invested in natural gas and/or nuclear energy generation activities that are compliant with the EU Taxonomy? 1

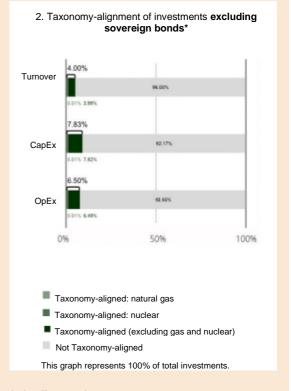

Yes:	
	In natural gas In nuclear energy
☐ No	

EU Taxonomyaligned activities are expressed as a percentage of:

- revenue to reflect the current ecological nature of investee companies;
- capital expenditure (CapEx) to show the green investments made by investee companies, relevant for a transition to a green economy;
- operational expenses (OpEx) reflecting green operational activities of investee companies.

The two graphs below show, in green, the percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

*For the purpose of these graphs, "sovereign bonds" include all sovereign exposures.

¹ Natural gas and/or nuclear energy generation activities only qualify as EU Taxonomy-eligible if they help mitigate climate change ("mitigation of climate change") and cause no significant harm to any of the EU Taxonomy objectives (see the explanatory note in the sidebar on the left). The set of criteria for natural gas and nuclear energy generation activities that are compliant with the EU Taxonomy are set out in Commission Delegated Regulation (EU) 2022/1214.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Enabling
activities directly
enable other
activities to make a
substantial
contribution to an
environmental
objective.

What was the share of investments made in transitional and enabling activities?

During the reporting period, the proportion of investments made in transitional activities was 0.00% and the proportion of investments made in enabling activities was 3.72%.

How did the percentage of EU Taxonomy-aligned investments compare with previous reference periods?

Indicator	2023-24	2022-23	2021-22
Revenue - Taxonomy aligned: fossil gas	N/A	N/A	0.00%
Turnover - Taxonomy-aligned: nuclear	0.01%	N/A	0.00%
Revenue - Taxonomy aligned (excluding gas and nuclear)	3.15%	3.00%	0.00%
Revenue - Not Taxonomy-aligned	96.84%	97.00%	100.00%
CapEx - Taxonomy-aligned: natural gas	N/A	N/A	0.00%
CapEx - Taxonomy-aligned: nuclear	0.00%	N/A	0.00%
CapEx - Not Taxonomy-aligned	6.18%	6.68%	0.00%
CapEx - Taxonomy-aligned (excluding gas and nuclear)	93.82%	93.32%	100.00%
CapEx - Taxonomy-aligned: natural gas	N/A	N/A	0.00%
OpEx - Taxonomy-aligned: nuclear	0.01%	N/A	0.00%
OpEx - Taxonomy-aligned (excluding gas and nuclear)	5.13%	5.20%	0.00%
OpEx - Not Taxonomy-aligned	94.87%	94.80%	100.00%

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

Sustainable investments with an environmental objective not aligned with the EU taxonomy accounted for 30.61%. The fund has not committed to investments aligned with the EU taxonomy.

What was the share of socially sustainable investments?

The subfund does not commit to having a minimum share of socially sustainable investments. However, when assessing issuers, the subfund manager does look at their employment characteristics, respect for human rights and employee rights, management conduct, and corporate social responsibility.

What investments were included under "Other", what was their purpose and were they covered by any minimum environmental or social safeguards?

The subfund holds cash, derivatives, as well as investments for which no non-financial analysis could be performed due to the unavailability of ESG data. Derivatives are used for portfolio risk adjustment (exposure, hedging).

What actions have been taken to attain the environmental and/or social characteristics during the reference period?

The subfund promotes ESG characteristics by investing primarily in companies chosen for their good environmental, social and governance practices and their financial qualities. This approach consists of selecting the best companies within the investment universe according to ESG criteria.

During 2024, we constantly adjusted the portfolio to meet our commitments. For example, we sold our shares in BNP Paribas, Commerz Bank and Bouygues, which were no longer compatible with our objectives.

How did this financial product perform compared with its benchmark?

The subfund is actively managed and does not track a benchmark. There is no benchmark representative of our management philosophy and therefore of our investment universe, nor has any index been designated to determine whether the subfund is aligned with the environmental or social characteristics that it promotes. The information requested in this section is therefore not applicable to this product.

- How does the benchmark differ from a broad market index?
 Not applicable
- How did this financial product perform with regard to the sustainability indicators designed to determine the benchmark's alignment with the environmental or social characteristics promoted?

 Not applicable
- How did this financial product perform compared with its benchmark?
 Not applicable
- How did this financial product perform compared with the broad market index?
 Not applicable

Benchmarks are indexes used to gauge whether the financial product attains the environmental or social characteristics that it promotes.

Subfund:

HSBC RESPONSIBLE INVESTMENT FUNDS - SRI DYNAMIC

SICAV HSBC RESPONSIBLE INVESTMENT FUNDS -**SRI DYNAMIC**

Activity report

Equity market allocation:

Equity markets made significant progress in 2024 with a clear outperformance of US indices. This good performance can be explained by accommodative monetary policies, with a 1% cut in key rates by the Fed and 1.35% by the ECB and a further outperformance of US growth linked to AI, such as the seven main US technology and communication companies, which gained 67% in 2024 compared with 17% for the global index in local currencies.

We remained slightly underexposed at the beginning of the year in anticipation of a slowdown in activity, but we judiciously increased our exposure following more robust economic performance.

As of 31 December 2024, the equity exposure of HRIF - SRI Dynamic was 80.7% of assets, slightly higher than that of its investment universe (80%).

Exposure on equity markets:

The equity segment consists mainly of physical securities and UCITS. This combination exposes the segment to various themes. In order to adjust the directional allocation, derivatives are used.

The management of the eurozone equity allocation follows our best-in-class SRI selection process, which aims to prioritise stocks for their good ESG practices. Added to this is an active fundamental approach based on an examination of the profitability/valuation profile, which favours stocks with an attractive valuation and profitability likely to improve significantly.

Over the period, sector allocation contributed positively to the subfund's relative performance. The positive contributions came from the overexposure to insurance and banking and the underweighting of consumer durables, energy and consumer staples. Negative contributions came from an overexposure to transport and utilities and an underweight position in capital goods.

Stock-picking contributed negatively to the fund's relative performance, notably our picks in semiconductors (STM), energy (Neste Q2 ESG), automotive (BMW) and capital goods (Kion, Siemens, Metso). Notable positive contributions came from Bawag and Erste in banking, Relx in business services, CRH and DSM in commodities and Iberdrola in utilities.

Overall, the eurozone equity allocation made a positive contribution in absolute terms and in line with its benchmark index.

International diversification is achieved by investing in the HRIF - SRI Global Equity subfund. This positioning was positive in terms of absolute performance but negative in terms of relative contribution due to the subfund's underperformance relative to its benchmark index.

As at 31 December 2024, we hold approximately 76.3% in direct securities and 4.4% in the HRIF -SRI Global Equity subfund.

We use futures on the Euro Stoxx 50 index to adjust the equity exposure. We have a short position of approximately -2.9% as of 31 December 2024.

SICAV HSBC RESPONSIBLE INVESTMENT FUNDS -**SRI DYNAMIC**

Fixed income allocation:

In 2024, the interest rate markets went through three main phases up to the end of May, followed by a period of easing until the end of September and a phase of volatility marked by spikes in bond market tensions in the final quarter. We started the year with a lower sensitivity to government bonds than the benchmark index. We judiciously reduced this underexposure in early June. The normalisation of inflation and the accommodative bias of monetary policy in the eurozone are supporting factors in the medium term.

Exposure on bond markets:

Given the small size of the bond portion of our investments, we invest in the HRIF - SRI Euro Bond subfund, whose performance has been in line with its benchmark since the beginning of the year.

As of 31 December 2024, the bond allocation of the HRIF - SRI Dynamic subfund was close to 15.7% compared with 20% for the investment universe.

Investments on the money market:

We use money market instruments tactically to hedge against rising volatility in equity and fixed income markets.

The allocation uses the following fund:

HSBC SRI Money

As at 31 December 2024, this position was nil.

Performance

At the close of the year, the subfund posted performance of 6.89% for the AC share and 7.59% for the IC share.

Past performance is not an indicator of the future results of the SICAV subfund.

PEA

Pursuant to the provisions of Article 91 *quater* L of the French General Tax Code, Annex 2, at least 75% of the subfund is invested at all times in securities and interests referred to in Article L.221-31-I-1 a, b and c of the French Monetary and Financial Code. 221-31 of the French Monetary and Financial Code.

Proportion of actual investment during the year: 77.06%.

Information on environmental, social, and governance (ESG) criteria

In accordance with Article L.533-22-1 of the French Monetary and Financial Code, the policy on considering environmental, social, and governance quality (ESG) criteria in the investment strategy is available on the management company's website at www.assetmanagement.hsbc.fr.

Further information on the inclusion of ESG criteria in the investment policy over the fiscal year

The transparency code for the subfund is available to the public online at www.assetmanagement.hsbc.fr and provides detailed information on the subfund's SRI approach.

"SFDR" Annex to Regulation (EU) 2019/2088 and its implementing technical standards

The subfund promotes environmental or social characteristics within under Article 8 of Regulation (EU) 2019/2088 of 27 November 2019 on sustainability-related disclosures in the financial services sector ("SFDR").

Information on environmental or social characteristics is available in the SFDR appendix of the annual report.

The management company's sustainable investment methodology is as follows:

Sustainable investment within the meaning of Article 2(17) of the European SFDR

The SFDR (EU Regulation 2019/2088 of the European Parliament and of the Council of 27 November 2019) on sustainability-related disclosures in the financial services sector comes into force in 2021, with the obligation for financial institutions to be transparent in their communication on sustainable investment strategies that incorporate environmental, social and governance (ESG) issues.

Under this regulation, as provided for in Article 2, point |17| of the SFDR, sustainable investment is defined as an investment that generates positive environmental and/or social outcomes. The challenge for asset managers has been to define and calculate the net positive contribution of companies to environmental and social issues, while ensuring that this positive contribution is not accompanied by negative impacts.

Sustainable investment is an investment in an economic activity that contributes to an **environmental objective** or an investment in an economic activity that contributes to a social objective, provided that these investments **do not cause significant harm** to any of these objectives and that the companies concerned apply **good governance** practices, particularly with regard to sound management structures, relations with staff, compensation, competent staff and compliance with tax obligations.

Article 2|17| of EU Regulation 2019/2088 on sustainability-related disclosures in the financial services sector (SFDR).

How is the sustainable contribution of issuers measured?

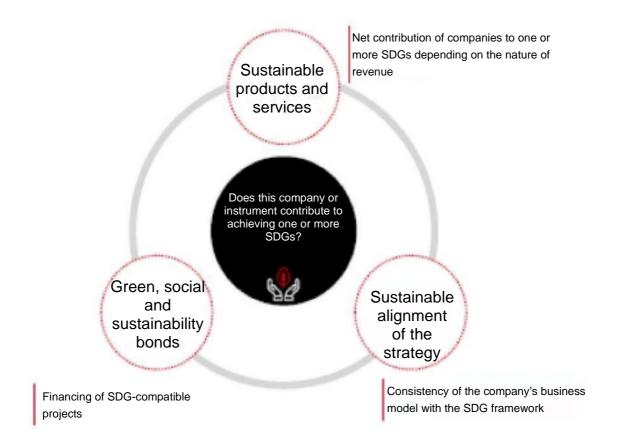

- We have developed a proprietary methodology to determine whether an instrument/issuer can be defined as a "sustainable investment" within the meaning of SFDR Article 2(17) and whether it can be taken into account in the calculation of the proportion of sustainable assets in portfolios.
- Since 2022, our methodology has evolved from seeking to align revenue with the United Nations Sustainable Development Goals (SDGs) to a broader approach that also incorporates the sustainable quality of issuers' business models, operations and sustainability strategies. This broadening of the scope of analysis better reflects the commitment and actions taken by companies to meet the challenges of sustainable development.
- Our assessment also includes a verification of the principle of Do No Significant Harm (DNSH) while taking good governance practices into account. This review takes into account the principle adverse impacts (PAI) in accordance with the SFDR. PAIs are a selection of environmental and social indicators to consider and report on, including greenhouse gas (GHG) emissions, carbon intensity and footprint, discharges and gender pay gaps.

Source: HSB Asset Management

Overview of the general investment process, which may differ depending on the product, the customer's mandate, or market conditions

Assessing the sustainable quality of an investment

Our methodology is based on the assessment of an investment's ability to contribute to the United Nations Sustainable Development Goals (SDGs) and has three dimensions¹:

An in-depth analysis is carried out on the basis of several external data sources, as well as internal analyses and research. These data sources include Sustainalytics, S&P Trucost and FTSE Green Revenue, as well as our proprietary databases on companies' green shares and their eligibility for the European taxonomy².

Based on sustainability thresholds defined for each of the analysed criteria (see details on page 3), issuers/instruments will be considered sustainable if they meet at least one of the three dimensions mentioned above.

Overview of the general investment process, which may differ depending on the product, the customer's mandate, or market conditions

579

⁽¹⁾ These three dimensions and their respective thresholds or indicators may be subject to change over time, without notice, depending on, for example, regulatory changes or clarifications, data availability, technological progress, etc. The parameters are as of the date indicated.

⁽²⁾ The European taxonomy refers to the classification of economic activities with a positive impact on the environment. Its objective is to direct investments towards sustainable – i.e. "green" – activities. https://finance.ec.europa.eu/sustainable-finance/tools-and-standards/eu-taxonomy-sustainable-activities en

The three dimensions of sustainability¹

3

To what extent does an investment contribute to one or more of the 17 SDGs?

Sustainable products and services

Current or expected sustainable net revenue in 3-5 years >=30%

Measure of the percentage of sustainable net revenue aligned with one or more of the 17 SDGs = measure of current or future revenue aligned with at least one of the SDGs (CAPEX², OPEX³ or EBITDA⁴), minus non-sustainable products and services, tobacco, thermal coal, prohibited weapons, the most severe environmental, social and governance (ESG) controversies, etc.

Quantitative score

Sustainable alignment of the strategy

Business models

Sustainable assessment of the business model: >=50% of the assessment questionnaire responses must obtain the highest score.

Assessing the sustainable quality of a company's business model integrates its operations and value chain, its sustainable development strategy and the management of the impacts of its activities on its environment and on communities. The positive contribution is identified based on alignment with the SDGs⁵.

Proven & verified (SMART⁵)

Sustainable theme

Thematic revenue of the company >=20%

or Assessment of the sustainable theme >=30%

These thresholds are tailored to emerging sustainable themes in industries that are still growing and/or fragmented, such as the circular economy.

Ambitions and practices

Progress made by the company in implementing its growth strategy verified on the basis of relevant indicators established by competent market bodies, for example credible carbon emission reduction targets approved by the Science Based Targets initiative (SBTi⁶).

Energy transition pathway

Assessment of activities that contribute to the energy transition based on the identification of the green share of the company's products and services (as a percentage of revenue) that makes it possible to finance the energy transition and the transition to renewable energies.

A company is considered a "sustainable transition asset" based on the intensity of its green share and criteria aligned with the Towards Sustainability label for the traditional energy (Oil & Gas) and power generation sectors.

Green, social and sustainability bonds

Use of bond issue proceeds in a sustainable business

For fixed income instruments, we view green, social and sustainability bonds as sustainable investments due to their clear and direct contribution to environmental and social goals. Green, social and sustainable bond instruments, as defined by the International Capital Market Association ("ICMA")⁸ and structures in accordance with its principles or guidelines, contribute, by their very design, to achieving environmental and/or social objectives aligned with the SDGs.

Source: HSB Asset Management

Overview of the general investment process, which may differ depending on the product, the customer's mandate, or market conditions

¹ These three dimensions and their respective thresholds or indicators may be subject to change over time, depending on, for example, regulatory changes or clarifications, data availability, technological progress, etc.

² Capital expenditure or CÁPEX, representing the capital invested for a company to acquire or modernise fixed, physical or non-consumable assets. Investment expenditures are primarily one-time investments in non-consumable assets used to maintain the existing operating levels within a company and to promote its future growth. Investment expenses server to buy or invest in tangible assets, such as real estate assets, raw materials, factories, buildings and equipment, which benefit the company beyond a single fiscal year. Intangible and non-physical assets, such as patents and licences, may also be considered as capital expenditure.

Operating expenses, or OPEX, include green costs, overheads and administrative costs, which are costs incurred as part of the main activities of the company, or overheads.
 EBITDA (earnings before interest, taxes, depreciation and amortisation) is another measure of a company's profitability other than net profit. By eliminating

[&]quot;EBITDA (earnings before interest, taxes, depreciation and amortisation) is another measure of a company's profitability other than net profit. By eliminating non-cash depreciation charges, as well as taxes and debt costs dependent on the capital structure, EBITDA attempts to represent the cash profit generated by the company's activities.

⁵ Specific, measurable, achievable, realistic and time-bound

⁶ Science-based targets provide companies with a clear path to reduce their greenhouse gas emissions, thereby helping to prevent the worst effects of climate change and preparing businesses for future growth. The targets are considered "science-based" if they are aligned with what the latest climate science deems necessary to meet the goals of the Paris Agreement, namely limiting global warming to 1.5°C above pre-industrial levels.

Do no significant harm principle

4

Our methodology verifies the absence of significant harm (DNSH) while taking good governance practices into account.

Our sustainable investments meet the requirements of the DNSH principle as defined by the SFDR (article 2(17) to the extent that they apply our exclusion policy detailed below:

DNSH principle – exclusions

For corporate bonds:

- Controversial and banned weapons score ²
- Revenue from tobacco production > 0%³
- Revenue from coal mining > 10%³
- Revenue from energy production via thermal coal > 10%³
- Non-compliance with the United Nations Global Compact ^{3,4}
- Reporting of the most serious controversies³

For government bonds:

- Reporting a breach with regard to a social issue³
- Any country on the HSBC sanctions list

The DNSH principle is examined in the same way as the good governance of the companies held in the portfolio, which forms the basis of our fundamental analysis and investment process.

Assessment of governance practices

- Our reflection process goes beyond governance scores and ESG scores. The quality of governance is assessed
 on the basis of criteria specified in the investment process, including ethics, corporate culture and values,
 governance structure and corruption.
- We determine the materiality of governance through an analysis of the governance structure, controversies, compliance with the principles of the UN Global Compact and the OECD guidelines for multinational companies.
- At a minimum, we exclude the most severe controversies for our actively managed funds.

⁽²⁾ The data comes in particular from Sustainalytics. Examples of controversies: activities related to child labour, major environmental damage, corruption, pollution, etc.

⁽³⁾ The United Nations Global Compact is a voluntary initiative based on the commitment of companies to implement universal principles of sustainable development and build partnerships to support the United Nations goal: https://unglobalcompact.org/.

Spotlight on the Sustainable Development Goals

5

The 2030 Sustainable Development Agenda, adopted by all member states of the United Nations, establishes a common plan for peace and prosperity for people and the planet, now and in the future.

At the heart of this agenda are the 17 SDGs, which call for action by all countries – both developed and developing – under a global partnership.

These goals were designed with the understanding that eradicating poverty and other deprivation must go hand in hand with strategies to improve health and education, reduce inequalities and stimulate economic growth, tackle climate change and work to preserve our oceans and forests.

Additional information relating to Shareholder Rights Directive II (SRD2)

Contribution to medium- and long-term performance

The deployed management strategy is active and disciplined. As a Multi-Asset manager, we focus on allocation decisions based on the HSBC Group's expertise for decisions in selecting securities. Decisions concerning shares in particular will attach importance to the financial criteria of valuation and profitability but also to non-financial criteria (environmental, social, and governance).

For allocation decisions, we assess investment opportunities within and between asset classes according to a multi-factor approach. In particular, the criteria of valuation, carry, and price dynamics are taken into account and evaluated in the light of the economic environment. Other criteria may also be incorporated on specific asset classes. The various sources of performance thus detected are combined to obtain a well-balanced distribution of active risk in the portfolio. These elements are likely to achieve the long-term objectives of outperforming the subfund's benchmark.

• Main significant risks

The subfund incurs primary and secondary risks, which are listed in the subfund's prospectus.

Turnover rate

Portfolio turnover rate: 22.93%

The SEC method is used to calculate the turnover rate: Annual TO = Min (Purchase of securities; Sale of securities) / Average AUM

Management of conflicts of interest

During the past fiscal year, there were no conflicts of interest related to engagement activities.

During this period, the management company decided to use a voting advisor, Institutional Shareholder Services (ISS), for engagement activities.

Securities lending

The management company did not engage in securities lending during the past fiscal year.

Information about investment decisions

Investment decisions are based on fundamental analysis of the companies included in the investment universe. Markets are not always efficient and do not always reflect the intrinsic value of companies.

In this context, investment decisions are based on long-term fundamental analysis, thus enabling us to take advantage of these opportunities arising from the excessive volatility of financial markets.

The management processes are based on exploiting the data from the fundamental analysis conducted by our independent research teams, whether in the short, medium, or long term. Furthermore, regardless of the asset class, the consideration of Environmental, Social, and Governance risks and opportunities (E.S.G. integration) is an integral part of the security selection process of the manager of the subfunds concerned with the objective of long-term outperformance.

Incidents affecting the subfund during the fiscal year and forthcoming

> 4 June 2024

Update of regulatory documentation with the following changes:

- ✓ Update of recurring costs and performance scenarios in the Key Information Documents (KID)
- ✓ Standardisation of the drafting of KIDs (covered by Article 8 of the SFDR and AMF category 1 "central communication") following the recommendations issued by the French Financial Markets Authority (AMF) as part of its SPOT control relating to compliance with asset management companies' contractual non-financial commitments.
- ✓ Information on the HSBC Group's responsible investment policies (coal policy and energy policy) has been specified in the prospectus and the SFDR appendix.

> 1 January 2025

Update of regulatory documentation resulting from changes made to the SRI label framework and other changes.

Following the entry into force on 1 March 2024 of the new SRI label framework applicable to French UCIs, the management of the subfunds that retain the label will change to adapt to the additional requirements of the SRI label set out below:

- 1- strengthen the requirements for selecting securities assets in the labelled subfund:
 - a) the market capitalisation weighted average ESG rating must be higher than the average ESG rating of the benchmark used for information purposes. In practice, the ESG rating that the subfund must outperform is calculated by removing the 30% worst stocks, based on exclusion criteria and the ESG rating. The "Best in class" approach has been abandoned in favour of the rating improvement approach.
 - b) the weighing assigned to each ESG pillar in the overall ESG rating is equal to at least 20% and varies according to the specific characteristics of the company's business sector.
 - c) a strict exclusion framework exists for each of the three ESG pillars, with the implementation of minimum exclusion criteria.
 - d) requirements in terms of monitoring controversies, shareholder engagement and voting policies have been strengthened.

- 2- a) ensure that application of the dual materiality requirement within the meaning of the European SFDR regulation is made systematic in management of the labelled subfund.
- 2- b) ensure consistency between the extra-financial performance of the labelled subfund, its ESG objectives and the associated performance monitoring indicators: the labelled subfund will undertake to outperform its benchmark indicator used for information purposes on two indicators most closely related to its ESG objective: the greenhouse gas (GHG) intensity indicator and the absence of human rights policy indicator.
- 3- incorporate a climate policy into the management of the labelled subfund: in order to limit its impact on the climate, the labelled subfund will no longer be able to invest in companies whose new projects are the exploration, exploitation and refining of fossil fuels, whether conventional or non-conventional.

In addition, in accordance with the changes to the French Financial Markets Authority (AMF) introduced by the regulations dated 6 October 2022, "operating and other service charges" may be deducted based on actual costs (the existing method) or based on a predefined flat rate, in both cases up to the maximum rate provided for in the prospectus.

With effect from 1 January 2025, HSBC Global Asset Management (France) has decided to deduct operating and other service charges based on a predefined flat rate.

The flat rate mentioned in the SICAV's prospectus will therefore be deducted even if the actual costs are lower than this rate. Conversely, if the actual costs are higher than the stated rate, the amount in excess of that flat rate will be borne by the management company.

Lastly, the wording of the following paragraphs of the prospectus will be updated:

- ✓ Restrictions on the issuance and redemption of units for US Persons
- ✓ Restrictions on the issuance and redemption of units for Canada residents
- ✓ Provisional measures prohibiting subscriptions to the fund from 12 April 2022.

Information relating to efficient portfolio management techniques and derivatives used by the subfund of the SICAV, pursuant to AMF position No. 2013-06

Efficient portfolio management techniques

As of the close of the fiscal year, the subfund of the SICAV did not use efficient portfolio management techniques.

Derivatives

As of the close of the fiscal year, the subfund of the SICAV did not use derivatives.

Aggregate exposure

The commitment method is used to calculate the aggregate exposure on financial futures.

Notes

- A. General information
- A1. Characteristics and activity of the open-ended UCI
- A1a. Investment strategy and profile

The investment objective of the HSBC Responsible Investment Funds - SRI Dynamic subfund is to maximise a performance corresponding to a diversified investment with high exposure to equity risk over a recommended investment period of at least 5 years. This investment is made by selecting securities of companies or countries selected for their good environmental, social, and governance (ESG) practices and their financial quality. The long-term strategic allocation is composed of 80% equities and 20% international bonds with a euro bias.

The UCI's prospectus provides a full and accurate description of these characteristics.

A1b. Characteristics of the UCI over the last 5 financial years

	31/12/2020	31/12/2021	30/12/2022	29/12/2023	31/12/2024

Accumulation per unit on revenue	79.18	129.04	176.90	191.98	177.32

A2. Accounting policies

The annual financial statements are presented for the first time in the form prescribed by ANC regulation 2020-07, as amended by ANC regulation 2022-03.

1 Changes in accounting methods, including presentation, in connection with the application of the new accounting regulation relating to the annual financial statements of undertakings for collective investment with variable capital (ANC regulation 2020-07 as amended)

This new regulation imposes changes in accounting methods, including changes in the presentation of annual financial statements. Comparability with the financial statements for the previous financial year cannot therefore be achieved.

NB: the statements concerned are (in addition to the balance sheet and the income statement): B1. Change in equity and financing liabilities; D5a. Allocation of distributable amounts relating to net income and D5b. Allocation of distributable amounts relating to net realised gains and losses.

Thus, in accordance with the second paragraph of Article 3 of ANC Regulation 2020-07, the financial statements do not present data from the previous financial year; the previous year's financial statements are included in the notes to the financial statements.

These changes mainly concern:

- the balance sheet structure, which is now presented by types of eligible assets and liabilities, including loans and borrowings:
- the structure of the income statement, which is extensively modified; the income statement includes in particular: exchange rate differences on financial accounts, unrealised gains and losses, realised gains and losses, and transaction fees;
- the removal of the off-balance sheet table (part of the information on the items in this table is now included in the notes);
- the removal of the option to recognise costs included in the cost price (without retroactive effect for funds previously applying the included costs method);
- the distinction between convertible bonds and other bonds, as well as their respective accounting records:
- a new classification of target funds held in the portfolio according to the model: UCITS / AIF / Other;
- the recognition of forward foreign exchange commitments, which is no longer done on the balance sheet but off-balance sheet, with information on forward foreign exchange contracts covering a specific portion;
- the addition of information relating to direct and indirect exposures to the various markets;
- the presentation of the inventory, which now distinguishes eligible assets and liabilities from forward financial instruments:
- the adoption of a single presentation model for all types of UCI;
- the removal of account aggregation for funds with subfunds.

2 Accounting rules and methods applied during the financial year

General accounting principles apply (subject to the changes described above):

- true and fair view, comparability, going concern;
- accuracy, reliability:
- prudence:
- consistency of accounting methods from one period to the next.

The interest cash basis is used to recognise revenue from fixed-income securities.

Purchases and sales of securities are booked excluding expenses.

The euro is the reference currency for the portfolio's accounting.

The duration of the reporting period is 12 months.

Asset valuation rules

The asset valuation rules applied by the accounting manager are outlined below according to the instruments held by the subfund:

The subfund has adopted the euro as the reference currency.

The prices used for the valuation of securities traded on the stock exchange are the closing prices.

The prices applied for the valuation of bonds are an average contributor. Funds are valued at their last known price.

Negotiable debt securities with a residual life of more than three months are valued at the market rate, with the exception of variable-rate or adjustable-rate negotiable debt securities not presenting any particular market sensitivity.

A simplified method known as "linearisation" is applied for negotiable debt instruments whose residual lifespan is less than three months with no particular sensitivity to the market on the basis of the crystallised three-month rate.

Repurchase agreements are valued at the contract price.

Firm and optional forward transactions and swap transactions made on OTC markets and authorised under the applicable fund regulations are measured at their market value or at an estimated value using methods chosen by the management company. Interest rate and/or currency swaps are valued at their market value based on the price calculated by discounting future cash flows (principal and interest) at the prevailing market interest and/or exchange rates.

European and foreign futures are valued using their settlement prices.

Interest rate and foreign currency swaps are valued under market conditions.

The valuation of interest-rate swaps against share performance is carried out:

- under market conditions for the fixed income branch
- according to the underlying security rate for the equity branch.

The valuation of Credit Default Swaps (CDS) stems from a model used by the spreads market.

Off-balance sheet commitments in European and foreign futures markets are calculated as follows:

- FUTURES

(Qty x Nominal x Daily price x Contract currency)

- OPTIONS

(Qty x delta) x (Nominal of underlying instrument x Daily price of underlying instrument x Contract currency).

For swaps, the off-balance-sheet commitment corresponds to the nominal value of the contract plus or minus the interest differential and the unrealised capital gain or loss on the closing date.

Transaction fees are recognised in specific accounts of each subfund and are not added to the price.

Financial instruments whose prices were not determined on the day of valuation or whose prices have been adjusted are valued at their probable trading price under the responsibility of the Management Company. These valuations and the associated justification are provided to the statutory auditor for auditing purposes.

Valuation of financial guarantees

Collateral is valued daily at the market price (mark to market).

Haircuts can be applied to collateral received in the form of securities according to the level of risk.

Margin calls occur daily unless otherwise indicated in the master agreement covering these transactions on in case of agreement between the Management Company and the counterparty on the application of a trigger threshold.

Financial management

Financial management fees and administrative fees external to the management company cover all fees charged directly to the subfund, with the exception of transaction fees. Transaction fees include intermediation fees (brokerage, stock exchange taxes, etc.) and activity fees, where applicable, which may be collected in particular by the depositary and the management company.

The following fees may be payable in addition to financial management fees and costs of administrative services external to the management company:

- performance commissions. These commissions are paid to the management company when the subfund has exceeded its targets. They are therefore charged to the subfund;
- activity fees charged to the subfund;
- a share of the income from temporary purchases and sales of securities.

In the event of an increase in administrative fees external to the management company equal to or less than 0.10% including tax per year, the subfund's shareholders may be informed by any means. In that case, the management company will not be required to notify the shareholders in any particular way or offer the option to redeem their shares free of charge.

	Fees charged to the subfund	Base	AC shares	IC shares:
1	Financial management fees (*)	Daily net assets	Maximum 1.35% incl. tax	Maximum 0.70% incl. tax
2	Operating charges and other services(**)	Daily net assets	Maximum 0.20% incl. tax.	
3	Maximum indirect costs (Management commissions and fees)	Daily net assets	Maximum 0.30% incl. tax	
4	Transaction fees	Deducted from each transaction	None	
5	Outperformance fee	Daily net assets	None	

^{*} A percentage of management fees may be passed on to third-party marketing agents in return for marketing the subfund

I. Fund registration and listing fees:

- fees related to the subfund's registration in other Member States (including fees charged by advisors (lawyers, consultants, etc.) for carrying out marketing formalities with the local regulator on the asset management company's behalf);
- fees for listing the subfund and publication of net asset values for investor information purposes;
- fees for distribution platforms (excluding retrocessions); Agents in foreign countries interfacing with distribution

II. Costs for keeping clients and distributors informed

- the costs of drafting and distributing KIDs, prospectuses and regulatory reports;
- the costs of providing regulatory information to distributors;
- the costs of providing information to unitholders by all means;
- information specific to direct and indirect holders; 9: Letters to holders;
- website administration costs;
- translation costs specific to the subfund

III. Data costs

- costs of data used for redistribution to third parties;
- costs for auditing and promoting labels (e.g. SRI label, Greenfin label)
- IV. Depositary, legal, audit, tax fees, etc.
- statutory audit fees;
- depositary fees;
- fees for delegation of administrative and accounting management;
- tax-related fees including those of lawyers and external consultants (recovery of withholding tax on behalf of the fund, local tax agent, etc.);
- legal fees specific to the subfund;
- Costs of creating a new subfund, amortisable over 5 years.

^{**} Operating and other service charges include:

- V. Costs relating to compliance with regulatory obligations and regulatory reporting
- costs for submitting regulatory reports to the regulator specific to the subfund;
- fees for compulsory professional associations
- operating charges for deployment of voting policies at General Meetings

The following costs may be added to the above-listed fees charged to the subfund:

- contributions due for the management of the subfund pursuant to Article L. 621-5-3-II-4° of the French Monetary and Financial Code;
- exceptional and non-recurring taxes, levies and government duties (in relation to the subfund);
- exceptional and non-recurring costs for the recovery of receivables (e.g. Lehman) or proceedings to assert a right (e.g. class action).

Swing pricing

The management company has implemented a swing pricing mechanism to adjust the net asset value of each of the subfunds once a trigger threshold is reached in order to protect the interests of the unitholders present in each of the subfunds.

Under this mechanism, investors bear the portfolio adjustment costs — including transaction fees, bid/offer spreads and taxes or fees applicable to the UCI — relating to investments or disinvestments when there are significant numbers of subscriptions and redemptions.

When the net balance of investor subscription and redemption orders exceeds a predefined threshold, called the "trigger point", the NAV is adjusted.

The NAV is adjusted up or down if the balance of subscriptions/redemptions is respectively positive or negative, so as to take into account the readjustment costs attributable to the net subscription and/or redemption orders.

The trigger threshold is expressed as a percentage of the subfund's net assets.

The parameters for the trigger point and the NAV adjustment factor are determined by the Management Company and periodically reviewed.

The adjusted ("swung") NAV is the subfund's only NAV and is therefore the only NAV published and communicated to unitholders.

By applying swing pricing with a trigger threshold, it is possible that the UCI's volatility will not come from only the volatility of the financial instruments in the portfolio.

In accordance with the regulatory provisions, the management company does not communicate the trigger points and ensures that internal communication channels are restricted so as to safeguard the confidential nature of the information.

Appropriation of distributable amounts

Definition of distributable amounts

Distributable amounts consist of the following:

Income:

Net revenue plus retained earnings and plus or minus the balance of the accrued income account.

Gains and losses:

Capital gains realised, net of costs, minus realised losses, net of costs, recognised during the fiscal year, plus net gains of the same type recognised in previous fiscal years that were not distributed or accumulated, plus or minus the balance of accrued gains.

The amounts referred to as "income" and "gains and losses" may be distributed, in whole or in part, independently of each other.

Distributable sums are paid within a maximum period of five months following the end of the financial year.

Where the UCI is authorised under Regulation (EU) No. 2017/1131 of the European Parliament and of the Council of 14 June 2017 on money market funds, by way of derogation from the provisions of I, distributable sums may also include unrealised gains.

Appropriation of distributable amounts:

Share(s)	Allocation of net income	Appropriation of net realised gains or losses
HSBC RESPONSIBLE INVEST FDS - SRI DYNAMIC IC share	Accumulated	Accumulated
HSBC RESPONSIBLE INVEST FDS - SRI DYNAMIC AC share	Accumulated	Accumulated

NOTES TO THE ANNUAL FINANCIAL STATEMENTS

1. Accounting policies

The annual financial statements are presented in the form prescribed by ANC regulation no. 2014-01, as amended.

General accounting principles are applied:

- true and fair view, comparability, going concern;
- accuracy, reliability;
- prudence;
- consistency of accounting methods from one period to the next.

The interest cash basis is used to recognise revenue from fixed-income securities.

Purchases and sales of securities are booked excluding expenses.

The euro is the reference currency for the portfolio's accounting.

The duration of the reporting period is 12 months.

Asset valuation rules

The asset valuation rules applied by the accounting manager are outlined below according to the instruments held by the subfund:

The subfund has adopted the euro as the reference currency.

The prices used for the valuation of securities traded on the stock exchange are the closing prices.

The prices applied for the valuation of bonds are an average contributor. Funds are valued at their last known price.

Negotiable debt securities with a residual life of more than three months are valued at the market rate, with the exception of variable-rate or adjustable-rate negotiable debt securities not presenting any particular market sensitivity.

A simplified method known as "linearisation" is applied for negotiable debt instruments whose residual lifespan is less than three months with no particular sensitivity to the market on the basis of the crystallised three-month rate.

Repurchase agreements are valued at the contract price.

Firm and optional forward transactions and swap transactions made on OTC markets and authorised under the applicable fund regulations are measured at their market value or at an estimated value using methods chosen by the management company. Interest rate and/or currency swaps are valued at their market value based on the price calculated by discounting future cash flows (principal and interest) at the prevailing market interest and/or exchange rates.

European and foreign futures are valued using their settlement prices.

Interest rate and foreign currency swaps are valued under market conditions.

The valuation of interest-rate swaps against share performance is carried out:

- under market conditions for the fixed income branch
- according to the underlying security rate for the equity branch.

The valuation of credit default swaps (CDS) stems from a model populated by market spreads.

Off-balance sheet commitments in European and foreign futures markets are calculated as follows:

- FUTURES

(Qty x Nominal x Daily price x Contract currency)

- OPTIONS

(Qty x delta) x (Nominal of underlying instrument x Daily price of underlying instrument x Contract currency).

For swaps, the off-balance-sheet commitment corresponds to the nominal value of the contract plus or minus the interest differential and the unrealised capital gain or loss on the closing date.

Transaction fees are recognised in specific accounts of each subfund and are not added to the price.

Financial instruments whose prices were not determined on the day of valuation or whose prices have been adjusted are valued at their probable trading price under the responsibility of the Management Company. These valuations and the associated justification are provided to the statutory auditor for auditing purposes.

Valuation of financial guarantees

Collateral is valued daily at the market price (mark to market).

Haircuts can be applied to collateral received in the form of securities according to the level of risk.

Margin calls occur daily unless otherwise indicated in the master agreement covering these transactions on in case of agreement between the Management Company and the counterparty on the application of a trigger threshold.

Financial management

Management fees and running costs cover all costs relating to the Fund for financial, administrative, and accounting management, custodianship, distribution, auditing, etc.

These fees are charged to the Fund's income statement.

Management fees do not include transaction fees. For more information on the costs actually billed to the fund, please see the prospectus.

They are recognised on a pro rata basis each time the net asset value is calculated.

The aggregate of these fees complies with the maximum fee rate as a percentage of the net assets given in the fund's prospectus or rules:

FR0013443173 - HSBC RESPONSIBLE INVESTMENT FUNDS - SRI DYNAMIC IC share: Maximum fee rate of 0.70% including tax.

FR0013443165 - HSBC RESPONSIBLE INVESTMENT FUNDS - SRI DYNAMIC AC share: Maximum fee rate of 1.35% including tax.

Operating and other service charges are a maximum of 0.20% including tax for all shares.

The maximum rate of indirect charges is 0.30% including taxes.

Swing pricing

The management company has implemented a swing pricing mechanism to adjust the net asset value of each of the subfunds once a trigger point is reached in order to protect the interests of the unitholders present in each of the subfunds

Under this mechanism, investors bear the portfolio adjustment costs — including transaction fees, bid/offer spreads and taxes or fees applicable to the UCI — relating to investments or disinvestments when there are significant numbers of subscriptions and redemptions.

When the net balance of investor subscription and redemption orders exceeds a predefined threshold, called the "trigger point", the NAV is adjusted.

The NAV is adjusted up or down if the balance of subscriptions/redemptions is respectively positive or negative, so as to take into account the readjustment costs attributable to the net subscription and/or redemption orders.

The trigger threshold is expressed as a percentage of the subfund's net assets.

The parameters for the trigger point and the NAV adjustment factor are determined by the Management Company and periodically reviewed.

The adjusted ("swung") NAV is the subfund's only NAV and is therefore the only NAV published and communicated to unitholders.

By applying swing pricing with a trigger threshold, it is possible that the UCI's volatility will not come from only the volatility of the financial instruments in the portfolio.

In accordance with the regulatory provisions, the management company does not communicate the trigger points and ensures that internal communication channels are restricted so as to safeguard the confidential nature of the information.

Appropriation of distributable amounts

Definition of distributable amounts

Distributable amounts consist of the following:

Income:

Net income for the financial year is equal to the amount of interest, arrears, premiums and bonuses, dividends, directors' fees and any other income relating to the securities that constitute the portfolio, plus income from temporary cash holdings, less management fees and borrowing costs.

Retained earnings are added to income and the balance of accrued income is added or subtracted as appropriate.

Gains and losses:

Capital gains realised, net of costs, minus realised losses, net of costs, recognised during the fiscal year, plus net gains of the same type recognised in previous fiscal years that were not distributed or accumulated, plus or minus the balance of accrued gains.

Appropriation of distributable amounts:

Share(s)	Appropriation of net income	Appropriation of net realised gains or losses
HSBC RESPONSIBLE INVESTMENT FUNDS - SRI DYNAMIC AC share	Accumulated	Accumulated
HSBC RESPONSIBLE INVESTMENT FUNDS - SRI DYNAMIC IC share	Accumulated	Accumulated

Sustainable investment

means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm either of these objectives and that the financial product's investee companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852, establishing a list environmentally sustainable economic activities. This regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental

objective are not necessarily aligned with the Taxonomy. **Product name:** HSBC RESPONSIBLE INVESTMENT FUNDS - SRI DYNAMIC

Legal entity identifier: 9695002V8BPHIL9GT010

Environmental and/or social characteristics

Ooes	oes this financial product have a sustainable investment objective?				
•		Yes		✓	No
	_	in economic activities that qualify as environmentally sustainable under the EU Taxonomy in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy		(E/S) did no sustai minim	omoted Environmental/Social) characteristics and while it not have as its objective a ainable investment, it had a mum proportion of 53.54% ainable investments with an environmental objective and made in economic activities that qualify as environmentally sustainable under the EU Taxonomy with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
		ade sustainable investments a social objective: _%		did r	romoted E/S characteristics but not make any sustainable estments.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Sustainability indicators measure how the environmental or social characteristics

The subfund promotes E, S and G characteristics by investing in international equity and fixed-income markets with a euro bias by selecting securities issued by companies or countries in a universe of issues that meet Environmental, Social and Governance (ESG) criteria. The subfund is invested, at its manager's discretion, either in securities of companies or countries or in UCIs managed by the HSBC Group.

promoted by the financial product are attained.

For public or private listed corporate issues: the manager uses a best-in-class approach to select within each sector the companies that have the best ESG practices compared with their peers within each sector of the economy. For each ESG pillar, several criteria are used, including CO2 emissions for the E pillar, management of staff for the S pillar, and level of independence of directors for the G pillar.

For government issues (bonds): euro-denominated issuing countries are classified according to their overall "ESG" rating, which is based 50% on the Environmental pillar (E) and 50% on the Social/Governance pillar (S/G). The Social and Governance pillar includes the analysis of the political and governance system, human rights and fundamental freedoms, and social conditions. The Environmental pillar includes the analysis of natural resources, climate change and energy, production, and sustainable consumption.

The manager uses an ESG Selection approach to select the countries with a minimum ESG rating according to the non-financial rating agency ISS-Oekom from among euro-denominated issuing countries.

In addition, the subfund will:

- Exclude issuers in violation of one or more of the 10 principles of the United Nations Global Compact (or at least two alleged violations) and the OECD Guidelines for Multinational Enterprises.
- Exclude securities of companies involved in the production of controversial weapons or their components. Controversial weapons include, but are not limited to, anti-personnel mines, depleted uranium weapons and white phosphorus when used for military purposes. This exclusion is in addition to the exclusion policy on weapons prohibited by international treaties.
- Exclude securities of companies in the defence sector.
- Exclude securities of companies engaged in thermal coal activities. Companies that derive more than 10% of their revenue from electricity generated using thermal coal are partially excluded. Mining companies are completely excluded.
- Exclude securities of companies involved in the production of tobacco.
- Carefully consider environmental issues through voting and engagement activities.

The subfund is actively managed and does not track a benchmark. There is no benchmark representative of our management philosophy and therefore of our investment universe, nor has any index been designated to determine whether the subfund is aligned with the environmental or social characteristics that it promotes.

How did the sustainability indicators perform?

Indicator	Fund	Benchmark
ESG Score	6.84	6.27
E Pillar	7.52	7.04
S Pillar	6.12	5.43
G Pillar	6.82	6.35
3. GHG emissions intensity of beneficiary companies - tonnes of CO2 equivalent per million euros of revenue	77.27	98.13
10. Violations of the principles of the United Nations Global Compact and the OECD Guidelines for Multinational Enterprises	0.00%	0.03%
14. Exposure to companies involved in the production of controversial weapons or their components (anti-personnel mines, depleted uranium weapons, white phosphorus when used for military purposes)	0.00%	0.01%

The data in this report are as of 31 December 2024, based on the average of the positions at the end of each of the four quarters of the financial year ended 31 December 2024.

What were the objectives of the specific sustainable investments that the financial product intended to make and how did its sustainable investments help meet such objectives?

The subfund's sustainable investments are aligned with its environmental characteristics. The identification and ESG analysis of companies are performed as part of the investment decision-making process to reduce sustainability risks and increase returns.

How did the specific sustainable investments that the financial product made not cause significant harm to any environmental or social sustainable investment objective?

The principle of "do no significant harm" to environmental or social objectives applies only to the underlying sustainable investments of the subfund. This principle is incorporated into the investment decision-making process, which includes consideration of principal adverse impacts.

How have the indicators for adverse impacts on sustainability factors been taken into account?

HSBC Asset Management's "do no significant harm" (DNSH) assessment of issuers as part of its sustainable investment process includes consideration of principal adverse impacts (PAI). It involves a holistic analysis of the company's multiple sustainability impacts rather than focusing on a single factor. When an issuer is identified as potentially controversial, it cannot be considered a sustainable investment. All relevant PAIs are thus examined and integrated into the investment process according to an approach that combines exclusions (sectoral, the most severe ESG controversies, norms-based exclusions, etc.) with voting and shareholder engagement activities to instil and maintain a positive change dynamic within companies. Furthermore, a company will not qualify as sustainable if it does not comply with the principles of the United Nations Global Compact and its associated international standards, conventions, and treaties or if it is involved in weapons banned by international conventions. With the exception of these last two PAIs, we use proxies. In our view, the setting of exclusion thresholds (e.g. GHG emissions) for each PAI is not always relevant and could compromise the fact that many sectors and companies are in a transition strategy. In addition, engagement is essential to ensure that companies with limited disclosure, particularly in emerging economies, are initially excluded from the definition of sustainable investment and allow us to be a catalyst for positive environmental or social change. For example, we use a 10% threshold on revenues from thermal coal mining (and coal-fired power generation) as an exclusion filter to indirectly address all PAIs related to greenhouse gas emissions. HSBC's sustainable investment methodology is available on the management company's website:

www.assetmanagement.hsbc.fr/fr/retail-investors/about-us/responsible-investors/policies

Were the fund's sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

Principal adverse impacts

are the most significant adverse impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption, and anti-bribery matters.

HSBC is committed to applying and promoting international standards. The ten principles of the United Nations Global Compact are among the priorities of HSBC's Responsible Investment Policy. These principles include non-financial risks such as human rights, labour standards, the environment, and anti-corruption. HSBC is also a signatory to the United Nations Principles for Responsible Investment. They provide a framework for the identification and management of sustainability risks. In this subfund, companies with a proven violation of one of the 10 principles of the United Nations Global Compact or at least two alleged violations are systematically excluded. Companies are also assessed according to international standards such as the OECD Guidelines for Multinational Enterprises.

The EU Taxonomy sets out a "do no significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives, and is accompanied by criteria specific to the EU.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the European Union criteria for environmentally sustainable economic activities.

Any other sustainable investments must also do no significant harm to any environmental or social objectives.

How did this financial product take into consideration principal adverse impacts on sustainability factors?

The principal adverse impacts of investments are considered in the management of the subfund as follows:

- For the selection of investments, the manager has chosen an environmental indicator: "Greenhouse Gas Intensity". The subfund's consideration of this indicator stems from, in particular, the application of our coal phase-out policy. In addition, the manager favours companies with low CO2 emissions or companies working to reduce their carbon intensity.
- Exclusion of issuers:
- Considered non-compliant with the principles of the United Nations Global Compact and the OECD Guidelines for Multinational Enterprises;
- Exposed to controversial weapons.
- Lastly, the subfund takes into consideration the principal adverse impacts in its engagement approach, which incorporates several levers for action including 1) direct dialogue with companies about their consideration of environmental and social issues to ensure that they are able to face the future and maintain long-term financial viability, 2) the exercising of voting rights by which we express our support for positive development initiatives or, conversely, our disagreement when directors do not meet our expectations, and 3) a gradual escalation procedure with companies when the ESG risks or controversies to which they are exposed are not managed. In practice, the Greenhouse Gas Intensity indicator is taken into consideration, in particular, through dialogue with companies to assess how their carbon neutrality transition plans take into account impacts on employees, supply chains, communities and consumers.

The list comprises the investments making up the largest proportion of the financial product's investments at: Average of the positions at the end of each of the four quarters of the reference period ended 31/12/2024

What were this financial product's largest investments?

What was the proportion of sustainability-related investments?

The proportion of sustainable investments was 53.54%.

The asset allocation

describes the proportion of investments in specific assets.

What was the asset allocation?

The category **#1 Aligned** with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

The category **#2 Other** includes the remaining investments of the financial product that are neither aligned with the environmental or social characteristics nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

- the sub-category #1A Sustainable covering environmentally and socially sustainable investments;
- the sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments
 - * A company or issuer that is considered a sustainable investment can contribute to both an environmental and a social objective that may or may not be aligned with the EU taxonomy. The figures in the chart above take this into account, but a company or issuer can only be counted once in category #1A Sustainable.

In which economic sectors were the investments made?

Sector / Sub-sector	% of assets
Financial	19.83%
Industry	17.80%
Information technology	10.31%
Consumer discretionary	8.58%
Other	8.53%
Telecommunications services	6.23%
Consumer staples	6.23%
Sovereign	6.09%
Utilities	5.69%
Electricity	5.12%
Materials	4.23%
Health	3.72%
Real estate	1.52%
Cash and derivatives	0.73%
Energy	0.51%
Oil and Gas Related Equipment and Services	0.05%
Oil and Gas Refining and Marketing	0.46%
Total	100.00%

To comply with the EU Taxonomy, the criteria applicable to natural gas include emission limits and switching to entirely renewable sources of electricity or to low-carbon fuel by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The proportion of sustainable investments aligned with the EU taxonomy is shown in the asset allocation table above.

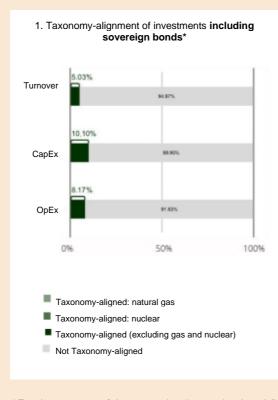

Has the financial product invested in natural gas and/or nuclear energy generation activities that are compliant with the EU Taxonomy? 1

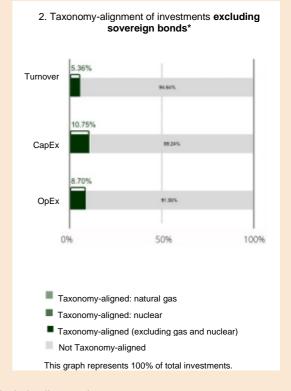

Yes:	
	In natural gas In nuclear energy
□ No	

EU Taxonomyaligned activities are expressed as a percentage of:

- revenue to reflect the current ecological nature of investee companies;
- capital expenditure (CapEx) to show the green investments made by investee companies, relevant for a transition to a green economy;
- operational expenses (OpEx) reflecting green operational activities of investee companies.

The two graphs below show, in green, the percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

*For the purpose of these graphs, "sovereign bonds" include all sovereign exposures.

¹ Natural gas and/or nuclear energy generation activities only qualify as EU Taxonomy-eligible if they help mitigate climate change ("mitigation of climate change") and cause no significant harm to any of the EU Taxonomy objectives (see the explanatory note in the sidebar on the left). The set of criteria for natural gas and nuclear energy generation activities that are compliant with the EU Taxonomy are set out in Commission Delegated Regulation (EU) 2022/1214.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Enabling
activities directly
enable other
activities to make a
substantial
contribution to an
environmental
objective.

What was the share of investments made in transitional and enabling activities?

During the reporting period, the proportion of investments made in transitional activities was 0.00% and the proportion of investments made in enabling activities was 5.81%.

How did the percentage of EU Taxonomy-aligned investments compare with previous reference periods?

Indicator	2023-24	2022-23	2021-22
Revenue - Taxonomy aligned: fossil gas	N/A	N/A	0.00%
Turnover - Taxonomy-aligned: nuclear	0.00%	N/A	0.00%
Revenue - Taxonomy aligned (excluding gas and nuclear)	5.03%	4.91%	0.00%
Revenue - Not Taxonomy-aligned	94.97%	95.09%	100.00%
CapEx - Taxonomy-aligned: natural gas	N/A	N/A	0.00%
CapEx - Taxonomy-aligned: nuclear	0.00%	N/A	0.00%

CapEx - Taxonomy-aligned: natural gas	N/A	N/A	0.00%
OpEx - Taxonomy-aligned: nuclear	0.00%	N/A	0.00%
OpEx - Taxonomy-aligned (excluding gas and nuclear)	8.17%	8.01%	0.00%
OpEx - Not Taxonomy-aligned	91.83%	91.98%	100.00%

2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

Sustainable investments with an environmental objective not aligned with the EU taxonomy accounted for 31.73%. The fund has not committed to investments aligned with the EU taxonomy.

What was the share of socially sustainable investments?

The subfund does not commit to having a minimum share of socially sustainable investments. However, when assessing issuers, the subfund manager does look at their employment characteristics, respect for human rights and employee rights, management conduct, and corporate social responsibility.

What investments were included under "Other", what was their purpose and were they covered by any minimum environmental or social safeguards?

The subfund holds cash, derivatives, as well as investments for which no non-financial analysis could be performed due to the unavailability of ESG data. Derivatives are used for portfolio risk adjustment (exposure, hedging).

What actions have been taken to attain the environmental and/or social characteristics during the reference period?

The subfund promotes ESG characteristics by investing primarily in companies chosen for their good environmental, social and governance practices and their financial qualities. This approach consists of selecting the best companies within the investment universe according to ESG criteria.

During 2024, we constantly adjusted the portfolio to meet our commitments. For example, we sold our shares in BNP Paribas, Commerz Bank and Bouygues, which were no longer compatible with our objectives.

How did this financial product perform compared with its benchmark?

The subfund is actively managed and does not track a benchmark. There is no benchmark representative of our management philosophy and therefore of our investment universe, nor has any index been designated to determine whether the subfund is aligned with the environmental or social characteristics that it promotes. The information requested in this section is therefore not applicable to this product.

- How does the benchmark differ from a broad market index?
 Not applicable
- How did this financial product perform with regard to the sustainability indicators designed to determine the benchmark's alignment with the environmental or social characteristics promoted?

 Not applicable
- How did this financial product perform compared with its benchmark?
 Not applicable
- How did this financial product perform compared with the broad market index?
 Not applicable

Benchmarks are indexes used to gauge whether the financial product attains the environmental or social characteristics that it promotes.
