

HSBC Portfolios

World Selection 1

Monthly report 30 September 2022 | Share class AC

Investment objective

The Fund aims to provide long-term capital growth and income by investing in a portfolio of bonds and shares. The Fund seeks to apply a low risk investment strategy.

Investment strategy

The Fund is actively managed and is not constrained by a benchmark. In normal market conditions, at least 90% of the Fund's exposure is to bonds, shares and alternative investment strategies. The Fund gains exposure to bonds that are investment grade, non-investment grade and unrated issued by the government, government-related entities, supranational entities and companies based in developed markets and emerging markets. The bonds can be denominated either in US dollar (USD), other developed markets currencies hedged into USD, or in emerging markets currencies. The Fund gains exposure to shares issued by companies of any size. The Fund may invest up to 100% in other funds although this investment will normally be between 25% and 75%. The Fund can have an exposure to bonds (or other similar securities) of up to 100% of its assets. The exposure to shares (or securities similar to shares) can be up to 25% of assets. The Fund may invest up to 20% in non-investment grade and unrated bonds, and up to 25% in alternative investment strategies. The Fund's primary currency exposure is to USD. See the Prospectus for a full description of the investment objectives and derivative usage.

Main risks

- The value of investments and any income from them can go down as well as up and you may not get back the amount originally invested.
- The Fund invests in bonds whose value generally falls when interest rates rise. This risk is generally greater the longer the maturity of a bond investment and the higher its credit quality. The issuers of certain bonds, could become unwilling or unable to make payments on their bonds and default. Bonds that are in default may become hard to sell or worthless. The value of investible securities can change over time due to a wide variety of factors, including but not limited to: political and economic news, government policy, changes in demographics, cultures and populations, natural or human-caused disasters etc.
- The Fund may invest in Emerging Markets, these markets are less established, and often more volatile, than developed markets and involve higher risks, particularly market, liquidity and currency risks.

HSBC Portfolios offer a choice of five different risk levels, to be selected by investors depending on factors like their financial goals, time horizon and capacity for loss. Typically, the more risk investors take, the more return they would expect to see.

At HSBC Asset Management, we measure risk by volatility – how sharply a Portfolio’s share price moves in any given time period (up or down). The higher the volatility, the higher the risk.

The table above shows the Portfolio’s return (for the primary share class or hedged currency share class) per year over the last three years (known as annualised) and the level of volatility over the same period. This can be compared against other funds in the peer group, as defined by an independent research company*.

An example of a good outcome would be that the HSBC Portfolio return is higher than the peer group’s average return and the volatility (risk taken) is lower. However investors should consider their own priorities when it comes to returns and the risk taken to achieve them.

*Morningstar Categories are used to define the peer group comprising funds they deem similar based on fund objectives and holdings. The average is a median.

Monthly performance commentary

Market Commentary

In September, the continuation of hawkish monetary policy, the Russia-Ukraine war, and mainland China property market volatility triggered a further fall in equity markets. The MSCI ACWI fell -9.5% in dollar terms. Notably, sterling weakness cushioned the equity market falls for UK investors, MSCI ACWI fell only 5.7% in GBP terms. The falls were led by Asian and US equities, while European markets proved more stable.

Global Government bonds provided relative stability over the month, falling modestly over the period. Gilts were in the spotlight, as markets priced in further BoE tightening after the UK's 'mini' budget. While yields rose across the curve, pain was most acute at the long end. The market was somewhat mollified after the BoE announced a temporary long-dated gilt purchase programme. In the US, the Fed hiked 75bp as expected, although indicated that rates were likely to peak at a higher level than previously forecast. The ECB also raised rates by 75bps during September, while the election of a right-wing coalition in Italy triggered Bund-BTP spread widening. In EMD, Brazil continues to be a global outlier, with yields falling on market expectations of rate cuts next year. Yields rose across the remainder of the EM complex, although notably Chinese bonds experienced a relatively smaller move. The Fed's hawkishness and rising risk aversion in the market drove the DXY 3.1% higher in September. Better-than-expected US economic data combined with inflation readings that surprised to the upside, reinforced the view that the Fed would move more aggressively to rein in inflation. Cable continued its downward trend in September, as weak economic data, high inflation, and the announcement of the UK government's new fiscal strategy weighed on the currency. The EUR fell 2.5% against the USD in September given worse-than-expected economic data and double-digit inflation. USD-JPY jumped to nearly 146 after the BoJ's unchanged monetary policy decision on 22 September. This spike prompted the central bank to intervene in the market to support the JPY, which fell rapidly to 141.0 following the announcement. Commodity markets were down also. Brent crude fell 8.6%, as increasing fears over a global economic slowdown and a stronger USD overshadowed the prospect for tightening supply.

Portfolio performance

As a result of the falling bond and equity markets in September, the World Selection portfolios delivered negative performance. Returns range from -4.33% for World Selection 1 to -8.77% in World Selection 5.

Active positioning was strongly positive during September. The largest contributor to relative returns was the funds' equity underweight, which added value as markets fell. Intra-equity positioning benefited from the overweight to Swiss versus European, although the preference for versus Emerging market detracted. Intra-bond positioning detracted as a result of the preference for Chinese versus Global Government bonds and Asia versus Global High Yield.

Equities - At the headline level we are underweight equities given a medium-term cautious outlook on growth

During the month we introduced an allocation to global listed infrastructure. The position was funded from holdings in global listed property. Listed infrastructure is expected to perform well in higher inflation environments, as well as providing an attractive level of income. We maintain our overweights to US Quality versus broad US equity, Swiss versus Europe ex-UK equity, and Chinese onshore equity versus emerging market equity. We also remain overweight Global Property

Lower risk bonds - At a headline level we remain underweight lower risk bonds. We are neutral on Securitised Credit and Corporate Bonds, and marginally underweight Inflation Linked Bonds. We continue to prefer US over Global Government Bonds given the yield differential.

Higher yielding fixed income - At a headline level we are overweight the higher yielding fixed income cluster. During September we marginally reduced our overweight to Asia versus Global high yield. We remain neutral EMD in hard currency, overweight EMD in local currency, and are neutral in High Yield, with a preference for Asian markets

Alternatives - At a headline level we remain overweight the Alternatives cluster. We are neutral Style Factors and marginally underweight Trend Following Strategies, although we maintain a preference for defensive trend strategies. We hold overweight positions in Commodities

Outlook

Amid sticky inflation, central banks are continuing to maintain a hawkish stance. Nonetheless, many indicators are pointing towards cooling inflation towards the end of this year and into early next year. We expect a total of 425bps of Fed rate hikes in 2022, leaving policy moderately restrictive by year end. Further US rate hikes are likely in early 2023 with policy makers adopting a 'hike-and-see' approach. Fiscal policy will have an important role to tackle growth headwinds. This includes targeted support for households and businesses in Europe and increased infrastructure investment in China. Recession concerns are beginning to mount with a US recession looking increasingly probable towards the second half of 2023. The European energy crisis will dent growth, while policy and geopolitical developments are likely to continue to keep global market volatility high. We remain defensively positioned. High inflation, recession, and monetary policy tightening raise the risk of financial stress and heightened market volatility. A profits slowdown is the next big risk to navigate. However, it is critical to focus on how much bad news is already priced in. Wider spreads and higher risk premiums can offer up income opportunities.

Risk disclosures

- Derivatives may be used by the Fund, and these can behave unexpectedly. The pricing and volatility of many derivatives may diverge from strictly reflecting the pricing or volatility of their underlying reference(s), instrument or asset.
- Investment Leverage occurs when the economic exposure is greater than the amount invested, such as when derivatives are used. A Fund that employs leverage may experience greater gains and/or losses due to the amplification effect from a movement in the price of the reference source.
- Further information on the potential risks can be found in the Key Investor Information Document (KID) and/or the Prospectus or Offering Memorandum.

This document is only intended for non-professional investors as defined by MIFID. The material contained herein is for information only and does not constitute investment advice or a recommendation to any reader of this material to buy or sell investments. There are risks involved with this type of investment. Investors and potential investors should read and note the risk warnings in the prospectus and relevant Key Investor Information Document (KIID). Past performance of investments is not necessarily a guide to future performance and the value of investments and any income from them can go down as well as up and you may not get back the amount you originally invested. The rate of currency exchange, where applicable, may cause the value of such investments to go down as well as up. Investments in emerging markets are by their nature higher risk and potentially more volatile than those inherent in established markets. You should view this investment as medium to long-term, and should plan to keep it for at least three years.

The Fund is manufactured by HSBC Investment Funds (Luxembourg) S.A. 16, boulevard d'Avranches, L-1160 Luxembourg ('the Management Company'). The Management Company has appointed HSBC Global Asset Management (Malta) Limited, 80 Mill Street, Qormi, as Distributor of the Fund with the right to appoint sub-distributors. In Malta, the Fund is distributed to Investors through HSBC Bank Malta p.l.c. (a sub-distributor of HSBC Global Asset Management (Malta) Limited).

Approved by HSBC Global Asset Management (Malta) Limited, 80 Mill Street, Qormi, which is regulated by the Malta Financial Services Authority under the Investment Services Act.
