

## HSBC Portfolios

# World Selection 3

Marketing communication | Monthly report 31 March 2025 | Share class ACHGBP

### Investment objective

The Fund aims to provide long-term capital growth and income by investing in a portfolio of bonds and shares. The Fund seeks to apply a medium risk investment strategy.

### Investment strategy

The Fund is actively managed and is not constrained by a benchmark. In normal market conditions, at least 90% of the Fund's exposure is to bonds, shares and alternative investment strategies. The Fund gains exposure to bonds that are investment grade, non-investment grade and unrated issued by the government, government-related entities, supranational entities and companies based in developed markets and emerging markets. The bonds can be denominated either in US dollar (USD), other developed markets currencies hedged into USD, or in emerging markets currencies. The Fund gains exposure to shares issued by companies of any size. The Fund may invest up to 100% in other funds although this investment will normally be between 40% and 90%. The Fund can have an exposure to bonds (or other similar securities) of up to 80% of its assets. The exposure to shares (or securities similar to shares) can be up to 85% of assets. The Fund may invest up to 20% in non-investment grade and unrated bonds, and invest up to 30% in alternative investment strategies. The Fund's primary currency exposure is to USD. See the Prospectus for a full description of the investment objectives and derivative usage.

### Main risks

- The value of investments and any income from them can go down as well as up and you may not get back the amount originally invested.
- The Fund invests in bonds whose value generally falls when interest rates rise. This risk is generally greater the longer the maturity of a bond investment and the higher its credit quality. The issuers of certain bonds, could become unwilling or unable to make payments on their bonds and default. Bonds that are in default may become hard to sell or worthless. The value of investible securities can change over time due to a wide variety of factors, including but not limited to: political and economic news, government policy, changes in demographics, cultures and populations, natural or human-caused disasters etc.
- The Fund may invest in Emerging Markets, these markets are less established, and often more volatile, than developed markets and involve higher risks, particularly market, liquidity and currency risks.

### Share class details

HSBC Portfolios offer a choice of five different risk levels, to be selected by investors depending on factors like their financial goals, time horizon and capacity for loss. Typically, the more risk investors take, the more return they would expect to see. At HSBC Asset Management, we measure risk by volatility – how sharply a Portfolio’s share price moves in any given time period (up or down). The higher the volatility, the higher the risk. The table above shows the Portfolio’s return (for the primary share class or hedged currency share class) per year over the last three years (known as annualised) and the level of volatility over the same period. This can be compared against other funds in the peer group, as defined by an independent research company\*. An example of a good outcome would be that the HSBC Portfolio return is higher than the peer group’s average return and the volatility (risk taken) is lower. However investors should consider their own priorities when it comes to returns and the risk taken to achieve them. \*Morningstar Categories are used to define the peer group comprising funds they deem similar based on fund objectives and holdings. The average is a median.

## Risk disclosures

- Derivatives may be used by the Fund, and these can behave unexpectedly. The pricing and volatility of many derivatives may diverge from strictly reflecting the pricing or volatility of their underlying reference(s), instrument or asset.
- Investment Leverage occurs when the economic exposure is greater than the amount invested, such as when derivatives are used. A Fund that employs leverage may experience greater gains and/or losses due to the amplification effect from a movement in the price of the reference source.
- Where overseas investments are held the rate of currency exchange may cause the value of such investments to go down as well as up.
- Further information on the potential risks can be found in the Key Information Document (KID) and/or the Prospectus or Offering Memorandum.

## Important information

This document is produced and distributed by HSBC Asset Management and is only intended for non-professional investors as defined by MIFID. The information contained herein is subject to change without notice.
