

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?	
<div><div><div></div><div></div></div><div><input type="checkbox"/> Yes</div></div>	<div><div><div></div><div></div></div><div><input checked="" type="checkbox"/> No</div></div>
<div><div><input type="checkbox"/> It made sustainable investments with an environmental objective: _%</div><div><div><input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy</div><div><input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</div></div><div><div><input type="checkbox"/> It made sustainable investments with a social objective: _%</div></div></div>	<div><div><input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 37.52 % of sustainable investments</div><div><div><input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy</div><div><input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</div><div><input type="checkbox"/> with a social objective</div></div><div><div><input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments</div></div></div>

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The characteristics promoted by this sub-fund were:

1. The sub-fund’s ESG score has been managed to be greater than the reference benchmark selected by the sub-fund (with a higher score than the benchmark representing stronger ESG credentials).
2. The sub-fund considered responsible business practices in accordance with UN Global Compact Principles.
3. The sub-fund excluded business activities that were deemed harmful to the environment.
4. The sub-fund identified and analysed all companies or issuers for environmental characteristics including, but not limited to, physical risks of climate change and human capital management. Screening has been conducted for the underlying E, S (which reflect the individual items of the environmental and/or social characteristics promoted by the sub-fund) and G pillars (corporate governance practices that protect minority investor interests and promote long term sustainable value creation, compared to the reference benchmark selected by the sub-fund).

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

5. The sub-fund actively considered environmental and social issues by engagement completed by our Engagement and Stewardship teams, which included proxy voting.
6. The sub-fund excluded investments involved in controversial weapons.

The ESG and sustainability indicator scores are calculated as per HSBC Asset Management's proprietary methodology and third party ESG data providers. Consideration of individual PAIs (indicated in the table below by their preceding number) can be identified from the sub-fund having a lower score than the Reference Benchmark. The data used in the calculation of PAI values are sourced from data vendors. They can be based on company disclosures, or estimated by the data vendors in the absence of company reports. Please note that it is not always possible to guarantee the accuracy, timeliness or completeness of data provided by third-party vendors.

The Reference Benchmark was used to measure the sub-fund's carbon intensity and ESG scores, but had not been designated for the purpose of attaining the environmental or social characteristics of the sub-fund.

The performance of the sustainability indicators the sub-fund used to measure the attainment of the environmental or social characteristics that it promoted can be seen in the table below.

● ***How did the sustainability indicators perform?***

Indicator	Sub-Fund	Reference Benchmark
ESG Score	8.37	6.94
E Pillar Weighted	1.28	1.22
S Pillar Weighted	2.54	2.14
G Pillar Weighted	2.34	2.19
3. GHG Intensity of investee companies - Tons of CO2 equivalents per million of Euros of revenue	66.00	144.58
10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises	0.00%	0.80%
14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	0.00%	0.00%

The data in this SFDR Periodic Report are as at 31 March 2023

Reference Benchmark - MSCI World

● ***...and compared to previous periods?***

This is the first SFDR Periodic report and as such there is no comparison.

● ***What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?***

The sustainable investments made by the sub-fund contributed to environmental and social objectives which included, amongst others.

1. The reduction of greenhouse gas (GHG) emissions and carbon footprint;
2. The promotion of human rights

The sub-fund aimed for lower exposure to carbon intensive businesses through portfolio construction and to make an improvement of the overall ESG score when compared to the benchmark.

● ***How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?***

We can confirm that the do no significant harm analysis was completed as part of HSBC Asset Management's (HSBC) standard investment process for sustainable assets, which included the consideration of Principal Adverse Impacts.

How were the indicators for adverse impacts on sustainability factors taken into account?

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Investment Adviser reviewed all SFDR mandatory Principal Adverse Impacts to assess the relevance to the sub-fund. HSBC's Responsible Investment Policy set out the approach taken to identify and respond to principal adverse sustainability impacts and how HSBC considered ESG sustainability risks as these could adversely impact the securities the sub-funds invested in. HSBC used third party screening providers to identify companies and governments with a poor track record in managing ESG risks and, where any such material risks were identified. Sustainability impacts, including the relevant Principal Adverse Impacts, identified by screening were a key consideration in the investment decision making process.

The approach taken, as set out above, meant that among other things the following points were scrutinised:

- companies' commitment to lower carbon transition, adoption of sound human rights principles and employees' fair treatment, implementation of rigorous supply chain management practices aimed, among other things, at alleviating child and forced labour. HSBC also paid great attention to the robustness of corporate governance and political structures which included the level of board independence, respect of shareholders' rights, existence and implementation of rigorous anti-corruption and bribery policies as well as audit trails; and
- governments' commitment to availability and management of resources (including population trends, human capital, education and health), emerging technologies, government regulations and policies (including climate change, anti-corruption and bribery), political stability and governance.

This sub-fund paid particular attention to:

- Greenhouse Gas emissions: the Investment Adviser aimed to reduce the overall portfolio carbon intensity compared to its benchmark, they also reduced the overall carbon footprint of the portfolio versus the benchmark. In addition, companies which generate more than 10% revenues from thermal coal extraction and coal-fired power generation would be excluded and finally the Investment Adviser also improved on the MSCI E score of the sub-fund versus the benchmark
- Social and employee matter: exclusion of stocks that were in breach of the UNGC principles, improvement of MSCI S score versus the benchmark and overall ESG score versus the benchmark, exclusion of controversial weapons from the portfolio
- Anti-corruption and anti bribery: improvement of MSCI G score versus the benchmark

The specific Principal Adverse Impacts for this sub-fund were as set out above.

HSBC's Responsible Investment Policy is available on the website at: www.assetmanagement/hsbc/about-us/responsible-investing/policies

*Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?
Details:*

HSBC was committed to the application and promotion of global standards. Key areas of focus for HSBC's Responsible Investment Policy were the ten principles of the United Nations Global Compact (UNGC). These principles included non-financial risks such as human rights, labour, environment and anti-corruption. HSBC was also a signatory of the UN Principles of Responsible Investment. This provided the framework used in HSBC's approach to investment by identifying and managed sustainability risks. Companies in which the sub-fund invested were expected to comply with the UNGC and related standards. Companies having clearly violated one of the ten principles of the UNGC were systematically excluded.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The approach taken to consider Principal Adverse Impacts meant that, among other things, HSBC scrutinised companies' commitment to lower-carbon transition, adoption of sound human rights principles and employees' fair treatment, and implementation of rigorous supply chain management practices such as those aiming to alleviate child and forced labour. HSBC also paid attention to the robustness of corporate governance and political structures which included the level of board independence, respect of shareholders' rights, existence and implementation of rigorous anti-corruption and bribery policies, as well as audit trails.

As a result of such screening, HSBC did not invest in certain companies and issuers.

What were the top investments of this financial product?

Large Investments	Sector	% Assets	Country
Microsoft Corporation	Information Technology	4.85%	United States of America
Apple Inc.	Information Technology	3.98%	United States of America
NVIDIA Corporation	Information Technology	1.80%	United States of America
UnitedHealth Group Incorporated	Health Care	1.71%	United States of America
JPMorgan Chase & Co.	Financials	1.50%	United States of America
Home Depot, Inc.	Consumer Discretionary	1.46%	United States of America
Intel Corporation	Information Technology	1.38%	United States of America
Coca-Cola Company	Consumer Staples	1.36%	United States of America
Cisco Systems, Inc.	Information Technology	1.35%	United States of America
Adobe Incorporated	Information Technology	1.32%	United States of America
Texas Instruments Incorporated	Information Technology	1.26%	United States of America
Lam Research Corporation	Information Technology	1.11%	United States of America
Applied Materials, Inc.	Information Technology	1.09%	United States of America
RELX PLC	Industrials	1.06%	United Kingdom of Great Britain and Northern Ireland
Regeneron Pharmaceuticals, Inc.	Health Care	1.06%	United States of America

Cash and derivatives were excluded

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is:

31/03/2023

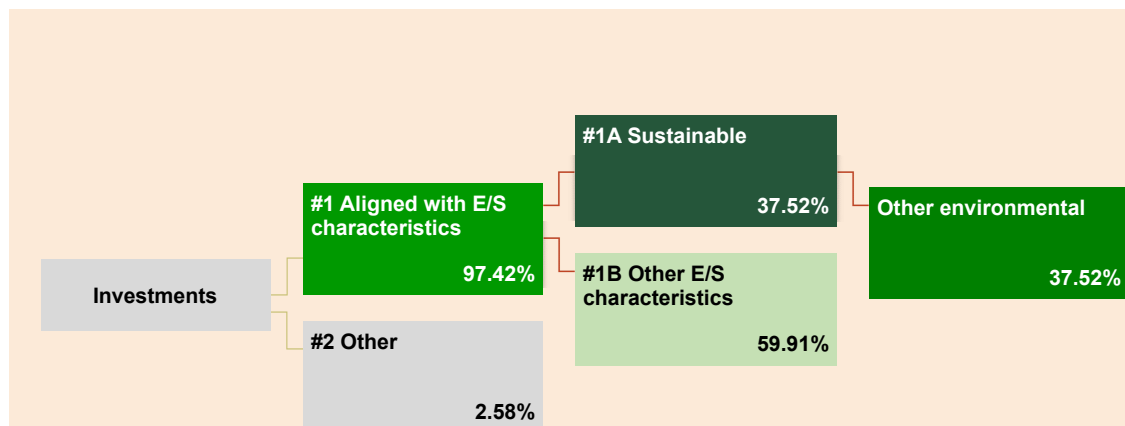

What was the proportion of sustainability-related investments?

37.52% of the portfolio was invested in sustainable assets.

Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made?

Sector	% Assets
Information Technology	26.41%
Financials	14.95%
Industrials	13.36%
Health Care	12.15%
Consumer Discretionary	10.87%
Consumer Staples	6.29%
Energy	5.82%
Communication Services	3.89%
Materials	3.41%
Real Estate	2.60%
Utilities	0.25%
Total	100.00%

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

N/A - the sub-fund did not make sustainable investments aligned with the EU Taxonomy.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

☐

Yes:

☐

In fossil gas

☐

In nuclear energy

☒

No

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflects the “greenness” of investee companies today.
- **capital expenditure** (CapEx) shows the green investments made by investee companies, relevant for a transition to a green economy.
- **operational expenditure** (OpEx) reflects the green operational activities of investee companies.

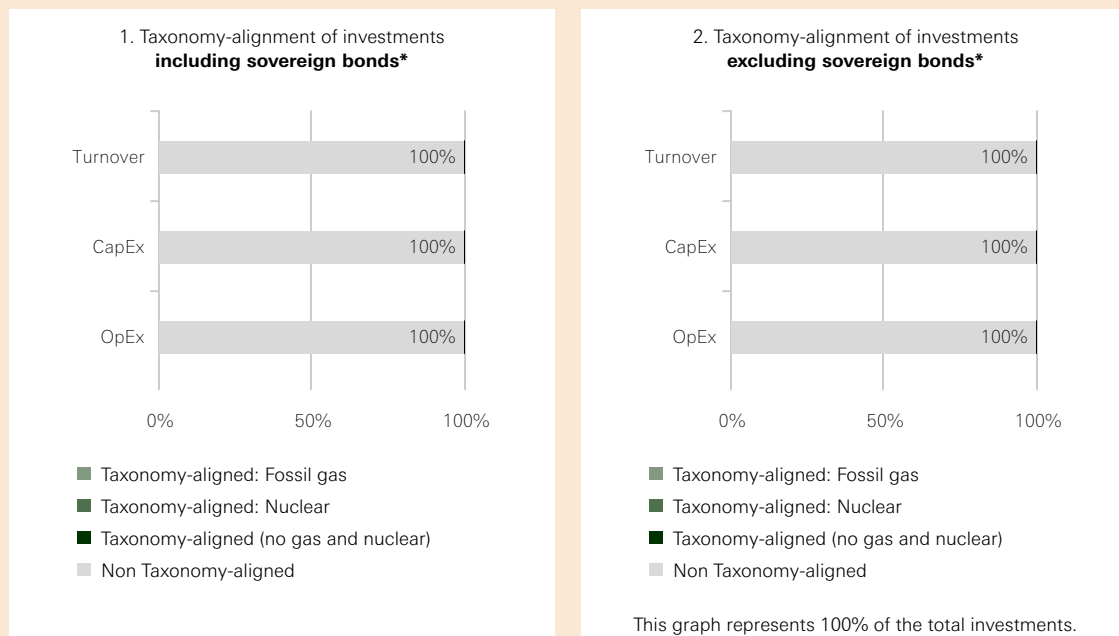

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do no significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, ‘sovereign bonds’ consist of all sovereign exposures.

● **What was the share of investments made in transitional and enabling activities?**

N/A - the sub-fund is not investing in transitional or enabling activities.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

As this was the first reporting period for the sub-fund, no comparison is required.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

37.52%

What was the share of socially sustainable investments?

N/A. The sub-fund did not invest in socially sustainable investments.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

The sub-fund may have held cash and cash equivalents and financial derivative instruments for the purposes of efficient portfolio management. The sub-fund may have held investments that were not aligned for other reasons such as corporate actions and non-availability of data.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The sub-fund invested in normal market conditions a minimum of 90% of its net assets in accordance with the Lower Carbon Strategy as described below, in equities and equity-equivalent securities of companies which were domiciled in, based in, carried out the larger part of their business activities in, or were listed on a Regulated Market in developed markets.

The sub-fund aimed for lower exposure to carbon intensive businesses through portfolio construction.

The sub-fund used a multi-factor investment process, based on five factors (value, quality, momentum, low risk and size), to identify and rank stocks in its investment universe with the aim of maximising the portfolio's risk-adjusted return. In order to lower exposure to carbon intensive businesses and raise the sub-fund's ESG rating, all holdings in the portfolio were assessed for their individual carbon intensity and ESG scores.

A HSBC proprietary systematic investment process was then used to create a portfolio which:

- maximised exposure to higher ranked stocks, and
- aimed for a lower carbon intensity and higher ESG rating calculated respectively as a weighted average of the carbon intensities and ESG ratings of the sub-fund's investments, than the weighted average of the constituents of the Reference Benchmark.

How did this financial product perform compared to the reference benchmark?

N/A

- ***How does the reference benchmark differ from a broad market index?***
N/A
- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***
N/A
- ***How did this financial product perform compared with the reference benchmark?***
N/A
- ***How did this financial product perform compared with the broad market index?***
N/A

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.
